American Railroad Journal.

Saturday, September 20, 1873.

Stock Exchange and Money Market.

Money has been more urgently sought after for speculative and mercantile purposes. Rates on call have been generally 6@7 per cent to the best class of Street borrowers with, toward the close, more stringency apparent, and the full legal rate as the current quotation, with, in many instances, a fractional commission paid by needy brokers for the use of funds from day to day. The discount market has been working much less satisfactory for the commercial public, and on strictly choice to prime grades of mercantile paper, the later quotations were as high as 9@12 per cent per annum, with a less free currency noted for commercial credits. The suspension of a prominent banking house tended to disturb confidence. It was generally believed, however, that the troubles of the firm would soon be ended, and its business activity speedily resumed. The city banks have shown a further material loss on their obligatory reserve, the last statement showing that they had $1,516,725 less than the 25 per cent reserve which the National banks are required by law to keep on hand. The U. S. Sub-Treasury, last week, reduced its coin balance about $1,563,991 and its currency reserve $453,487. Its currency reserves at the close of the week were $30,856,961; and its coin board, $52,953,427. The clearances of the city banks averaged through the week about 91⅜ millions a day, and amounted in the aggregate, for the whole week, to $548,295,979, as against $553,727,902 the preceding week. The specie reserve of the city banks according to the latest return is $20,442,300, against $12,787,200 same time last year. The city bank deposits are now $207,317,500 against $209,546,000, week ending Sep. 14, 1872. The legal tender reserve amounts to $36,717,200, against $48,105,600 same time last year. The circulation now stands at $27,383,400 against $27,626,400 same time last year. The loans are now $284,536,200 against $284,650,300 at this date last year.

Gold has been moderately active, since our last. The speculative demand has been less confident. The customs inquiry has been up to a fair average. The export drain light. The range of the price during the week has been from 111@112, and the quotation on Wednesday was 111⅜ against 111¼ on Wednesday of the preceding week. The specie outflow last week, was only $510,963. The Gold Exchange Bank clearances have averaged a trifle over 153½ millions per day during the week.

The customs demand for Gold last week, averaged $519,000 a day. The total customs revenue of the Government, in coin, at this port, since Jan. 1, 1873, has been $93,798,049 against $111,149,649 during the same time in 1872. Government has disbursed through the U. S. Sub Treasury here, on account of the coin interest on the public debt, since January 1, 1873, $54,526,529, against $58,709,532 during the same time in 1872. The export drain of specie was $510,963 last week, and the shipments since January 1, 1873, have been $40,989,302 against $58,045,452 during the same portion of 1872.

Foreign Exchange has shown more steadiness, with a rather better inquiry noted. Bankers' sixty day bills on London closed on Wednesday at 108½@108⅝; sight bills on London, at 109¼@109⅜. The week's exports of Domestic Produce have been to the currency value of $6,386,388.

Government securities, in sympathy with the variable course of Gold, have fluctuated slightly in price. The offerings at the current rates have been moderate. The demand has been equal to the available supply at the ruling figures. Ten Forties have been in exceptionally good request and, having been scarce, have been quoted higher.

U. S. sixes of 1881 closed on Wednesday of this week at 116⅞@117; U. S. Five-Twenties of 1862, 113½@114; U. S. Five-Twenties of 1864 at 113¾@114; U. S. Five-Twenties of 1865 115½@115¾; U. S. Five-Twenties of 1865 consolidated 115½@115¾; U. S. Five-Twenties of 1867, 116@116½; U. S. Five-Twenties of 1868, 116@116½; U. S. Ten-forties at 112½@113; U. S Fives of 1881 (Funding Loan) 111½@112; Six per cent. currency Sixes from 112¾@113.

Railway Mortgage Loans have been moderately sought after at firm rates for the more substantial loans. Central Pacific Sixes have been in fair demand closing firmly at from 99½@99¾. The Chesapeake and Ohio Seven per cent gold bonds have been in request at 90, and interest. Chesapeake and Ohio Sixes at 88½ and interest Western Pacific Sixes at 92@92½. The Northern Pacific 7-30 Loan has been selling to a fair extent, for investment purposes at par and interest.

The Railway and Miscellaneous share speculation has been moderately active, with prices quoted quite variable, and at the close, weak.

The directors of the Central Pacific Railroad Company of California have declared a dividend of 3 per cent on its capital stock of $54,275,500 all paid, up being its first dividend. It is payable on the 20th inst. on presentation of dividend warrant No. 1. Eastern stockholders can receive their dividend at the office of the company, No. 9 Nassau st., New York.

State bonds have been comparatively quiet, with prices quoted about steady.

General business has shown a moderate degree of animation. Foreign goods have been in fair request, as a rule, and held with firmness. There has been a fairly active movement noted in Copper, mainly for forward delivery, but at a shade easier prices; sales, 150,000 lbs, Lake, early delivery, at 26½c.,; 1,000,000 lbs., for forward delivery, at 27c. per lb. Scotch Pig-iron has been in good demand and very firm; sales, 890 tons Glengarnock, ex the City of Richmond on private terms, quoted at $47; also, 50 tons Summerlee at $48. No. 1 American Pig strong, as to price, but quiet. No. 2 do. dull and irregular. Sales, 500 tons Gray Forge on private terms. We quote: Eglinton Pig at $45@$46; Glengarnock, $47; No. 1 American Pig at $44@$46; No. 2 do. at $36@$38; English Rails at $64@$67, gold; American Rails at works, $75@$77; old Rails, $46@$47; Wrought Scrap, $40@$45, from dock and yard. Pig-lead has been very quiet, with foreign quoted at 7c., gold, for ordinary, and domestic at 6½c.@6¾c., gold. Spelter dull and quoted at $7 37½@$7 60, gold. Pig-tin has been quiet, with Straits quoted at 31¼c.; English at 28½c. Tin Plates have been moderately sought after at about previous figures. Sales, 750 boxes Charcoal at $10 62½@$10 75; 250 boxes Charcoal Terne at $10 12½@$10 25, and 240 boxes do., S. T. P., at $10, gold. Charcoal Plates quoted at $10 62½@$11; Charcoal terne, $9 50@$10; Coke, $8 37@$8 75; Coke Terne, $7 37½@$8 25, gold, per box. Zinc neglected and unchanged. Most kinds of domestic produce have met with a readier sale, though at unsettled prices. Flour and Wheat closed lower; Corn, Oats, Pork, Lard, Bacon, Cheese, Naval Stores and Petroleum firmer; Cotton also steadier toward the close, and old stock offered less freely. Middling upland Cotton left off firmly at 20¼@20⅝c. per lb. Tobacco and Wool have been quoted firm. Hides and Leather, moderately dealt in at full rates. Ocean freights quite brisk, and rates well maintained; room on berth, and suitable tonnage on charter, scarce.

At the Live Stock Markets, Beeves have been more sought after at from 7@8¼ cts. Veals in fair demand at 6@10 cts. Sheep at from 4¼@6½ cts.; Spring Lambs 5¾@7¾ cts; Swine at 5¼@5⅝ cts. per lb., all live weight. The week's receipts were 10,048 Beeves, 3,176 Veal Calves, 31,151 Sheep and Lambs, and 38,341 Swine.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Atlantic and Pacific pref., 20⅛; New Jersey Southern R. R., 22¼; Rensselaer and Saratoga R. R., 104; Warren R. ☞ Track laying has been commenced on the Kingston and Pembroke (Ca.) Railway.

OFFICE OF FISK & HATCH,
No. 5 NASSAU ST., NEW YORK, Sept. 15, 1873.

THE CHESAPEAKE AND OHIO RAILROAD —A GREAT EAST AND WEST TRUNK ROAD—420 miles in length, connecting the Atlantic, by the shortest line, with the commerce of the Ohio and Mississippi Rivers, is completed and in regular operation. The through freight of products to and from the Western States is rapidly increasing, as is also the mineral traffic of the growing coal-mining and iron-mining industries along the route.

We are selling for the Company their **SEVEN PER CENT. GOLD BONDS,** secured by mortgage liens on the whole valuable property, at 90 and accrued interest; $1,000 each, either coupon or registered, payable in gold coin, in New York City, principal and interest; interest January and July.

Being the obligations of a very responsible corporation secured by a great productive property, worth over $40,000,000, now entering upon a prosperous career, they are very desirable for investors.

We also have a small amount of the **OLD SIX PER CENT. GOLD BONDS OF THE CHESAPEAKE AND OHIO;** price 88½ and accrued interest; denominations $100, $500, and $1,000, interest payable in New York May and November.

We recommend both classes of Bonds to our friends and customers.

We also continue to deal in **Government and Central Pacific, and Western Pacific Bonds,** execute orders at the Stock Exchange for investment Stocks and Bonds, receive Deposits, on which we allow interest at the rate of 4 per cent. per annum, and conduct a general Banking business.

FISK & HATCH.

Union Pacific Land Sales.

A correspondent of the Boston *Journal*, noticing the recent statement of the land sales of the Union Pacific Railroad Co., raises this question:

"The above information is good, so far as it goes; but I would also like to know what becomes of this money, whether any of it, and if any, how much is used to retire the Land Grant Bonds.

Respectfully,
A SUBSCRIBER AND BONDHOLDER."

In reply, Hon. E. H. Rollins, the Treasurer of the Co., furnishes to that paper the following information:

We have already canceled, from the proceeds of land sales of this Company, Land Grant Bonds to the amount of $1,741,000, and have land notes on hand to the amount of $1,795,456 73, which, when collected, will be used to redeem Bonds, all the proceeds of the sales of lands being used exclusively for that purpose the Company paying all the expenses of the Land Department.

Yours truly,
E. H. ROLLINS, Treasurer.

☞ The grading of the Chicago and Northern Pacific Air Line is nearly completed from the Wisconsin State line to Jefferson, Wis., and iron laid part way. The survey has been completed between Jefferson and Chicago, and right of way secured to within seven miles of the latter place.

☞ The name of the Green Bay and Lake Pepin Railway Company has been changed, by a vote of the directors, to that of the "Green Bay and Minnesota Railroad Company."

Baltimore and Ohio Railroad.

The regular monthly meeting of the board of directors of the Baltimore and Ohio Railroad Company was held in Baltimore on the 10th inst., John King, Jr., Esq., president pro tem., in the chair. After the transaction of the routine business of the board, Mr. King stated that advices had been received from President Garrett, announcing the negotiation of £1,000,000 of the company's six per cent sterling bonds, by Messrs. Baring, Brothers & Co., of London, being the remainder of the £2,000,000 authorized. The price obtained (96½) was regarded as very satisfactory, especially in view of the general want of success which had recently attended negotiations of American railway securities abroad. The loan was taken in a single day, the offers being for more than £2,000,000 at the price named. Mr. King also made the following statement:

The revenue of the Baltimore and Ohio road and branches, including the Ohio divisions, for August, 1873, amounted to $1,414,596 60, being an increase of $132,748 32 as compared with August, 1872. The revenue for the quarter ended 31st August, 1873, for Baltimore and Ohio Railroad and branches, including the Ohio divisions, was $4,113,483 17, being an increase of $423,527. 94 as compared with the corresponding period of last year.

During the quarter 550,378 tons of coal were transported, being an increase of 96,180 tons as compared with the corresponding quarter of last year. Three hundred coal hoppers have been built this season, and the largely increased coal traffic has been regularly supplied with transportation as required. Fifty locomotives, 1,291 freight and 33 passenger and baggage cars have been added to the equipment since March 1, 1873.

In conformity with the resolution of the board adopted at the July meeting, the means and credit of the company have been advanced from time to time for the extension of the line from Lynchburg to Danville. Five thousand tons of rails were contracted for of the Abbott Iron Company, and it is expected that the road will be completed this autumn. A large increase of trade with Baltimore may be expected from this valuable connection.

On the first of September the Baltimore and Ohio Company took possession of the branch between Strasburg and Harrisonburg in accordance with the lease. The work upon the valley road has been pressed with great vigor, and it is expected that the line will be opened in December next as far as Staunton, where a connection with the Chesapeake and Ohio road will be formed.

The line of the Chicago extension as far as Deshler, sixty-two miles from the Lake Erie division, will be completed in November next, at which place a connection will be made with the Dayton and Michigan road, and an outlet from the great grain market of Toledo provided. It is expected that the opening of this line will attract to Baltimore a very large amount of cereals which have heretofore found a market in New York. The entire graduation and masonry of the Indiana division, it is believed, will be completed this year, and the road finished to Chicago in 1874.

The work upon the third track east of Piedmont, and the second track between Piedmont and Grafton, has progressed steadily and satisfactorily during the past summer, as has also that upon the additional elevator at Locust Point. The vast and increasing quantities of grain constantly coming forward from the West to the seaboard demand the earliest practicable construction of this improvement, and every effort is therefore being made to hasten its completion.

☞ The final work of construction on the Burlington, Cedar Rapids and Minnesota Railway was finished on the 8th inst., which now fully completes that enterprise.

Canada Southern Railway.

The opening of the Canada Southern Railway was delayed for some time by the non-completion of the International Bridge over the Niagara River, a work over which the Canada Southern had no control. This bridge will be completed by October. In the meantime arrangements have been made for the use of the Suspension Bridge, fifteen miles below the International, and reached by the Erie and Niagara Railway, which is owned by the Canada Southern. This route has been and will be used for freight business, but no through passenger trains will be put on until the International Bridge is done. The Canada Southern by October first will be running 465 miles of road, to wit: Canada Southern, 292 miles; the Chicago and Canada Southern, 70 miles; the Toledo, Canada Southern and Detroit, which makes the connection with the Toledo, Wabash and Western, the Dayton and Michigan, the Pennsylvania Railroad branch leading to Pittsburg, as well as with roads centering at Detroit, 58 miles; the Erie and Niagara, 31 miles; and the Michigan Midland and Canada, 14 miles.

☞ A magnificent new iron steamship will be launched in a few days from the shipyard of Harlan & Hollingsworth, at Wilmington Delaware, for the Baltimore and Boston Steamship Company. This vessel is of 2,000 tons capacity, being the largest by 300 or 400 tons of any steamer of the line. She is to be named the "Johns Hopkins," and will cost about $280,000. This splendid piece of marine architecture will be handsomely furnished in the same style as the steamship William Crane, built by the same firm, with such additional improvements as experience has since suggested.

☞ The Philadelphia *Ledger* reports the total anthracite coal tonnage for the week ending September 6, at 487,190 tons, and for the coal year 13,333,127 tons, against 12,909,331 tons to corresponding time last year, being an increase of 423,796 tons. The bituminous tonnage for the week is 67,717 tons, and for the year 2,136,831 tons, giving a total of all kinds for the week of 564,807 tons, and for the year of 15,459,958 tons, against 14,797,825 to same time last year, being an increase of 662,133 tons.

☞ Messrs. J. B. Dacey & Co. of Boston have contracted with the Wood River Railroad Company of Rhode Island to build their road, which runs from Richmond switch on the Providence and Stonington Railroad to Hope Valley. Messrs. Dacey & Co., are to build the road complete, including bridges, masonry, and the furnishing of iron and all materials for a lump sum, and have the road running by July next.

☞ A Washington despatch says that representation is made to the Treasury Department that the coinage act of 1873, by which the value of the pound sterling was altered from 4.84 to 4.86 65-100 will increase the duties upon imports from Great Britain to the United States by a little more than one-half of one per cent.

☞ The earnings of the Erie Railway Company for the week ending Sept. 7, 1873, were $428,303, and since July 1, $3,888,257—an increase over the corresponding period of the previous year fo $310,348.

Big Sandy Railroad.

The construction of the Big Sandy Railroad, from the month of the Big Sandy to Mount Sterling, Kentucky, is for the purpose of affecting a western outlet to the Chesapeake and Ohio Railroad. The Valley *Virginian* says:

"Arrangements are now being consummated for the contractors to go to work on the Big Sandy road projection, which will constitute one of the main western connections. Mr. Huntington, when in Staunton a few days ago, had a conference with Messrs. McMahon, Mason, Menifee and Johnston, with reference to the early inauguration of work on this improvement, and the probability is that it will be commenced early this fall. It embraces about eighty miles."

A New Car Spring.

A company has been formed in this city, as we learn, for the purpose of manufacturing a newly patented Car Spring. It is the invention of an experienced English engineer, living here, and the Spring is believed to be one that possesses decided merit.

It is composed of a peculiar kind of steel, and as far as we have been able to learn, is a sort of compound spiral, and so arranged, in suitable boxes or cases, as to present or bear a uniform pressure or compression, under all circumstances.

When ready for business, parties interested will doubtless avail themselves of such means of communicating with the public, as will bring their goods directly to the notice of the Railway people of the country.

☞ The stockholders of the Chicago and Alton Railroad Company have decided to authorize the creation of an indebtedness not exceeding $8,000,000, and securing the same by mortgage, in order to cancel the bonded indebtedness of the company, and furnish means for procuring steel rails, double track, rolling stock, &c., for increased traffic. It is proposed to set apart $3,470,000 for retiring a like amount of mortgage bonds falling due at different periods. Of the remainder, $4,530,000, it is proposed to sell $1,500,000 this year, the proceeds to be applied in the construction of a bridge over the Mississippi river at Louisiana, Mo., of which the company will be the sole owner.

☞ The Portsmouth and Dover Railroad bridge across the Cocheco is nearly completed. It is a fine structure, 320 feet long, containing 7,292 pieces, and is built of clear pine and iron. The American Bridge Company of Chicago are the builders.

☞ The track-layers of the Western Maryland Railroad, between Hagerstown and Williamsport, commenced operations the first of the present week, and they seem to be pushing the work forward as rapidly as could be desired.

☞ The gauge of the Grand Trunk Railway will be changed to 4 feet 8½ inches between Toronto and Montreal, on Saturday 4th of October next.

☞ The estimated earnings of the Kansas Pacific Railway for the week ending Sept. 8, are: freight, $38,390 06; passengers, $34,839 11—total, $73,229 17.

☞ H. S. McComb has been elected President; Samuel H. Edgar, Vice President; John M. Rodney, Treasurer, and William Calhoun, Secretary, of the Southern Railroad Association.

Journal of Railroad Law.

COMMON CARRIERS NOT INSURERS OF ANIMALS AGAINST INJURIES RESULTING FROM THEIR NATURE AND PROPENSITIES—LAW AS TO TRANSPORTATION OF CATTLE.

The facts in the recent case of Perin. *vs.* Buffalo and Erie R. R. Co., (94 N. Y., 204), are fully and clearly stated in the following opinion by—

ALLEN, J.—The liability of a common carrier of animals is essentially different from that of a carrier of merchandise or other inanimate property. While common carriers are insurers of inanimate property against all loss and damage except such as is inevitable or caused by public enemies, they are not insurers of animals against injuries arising from their nature and propensities, and which could not be prevented by foresight, vigilance and care. (Clark *vs.* Rochester and Syracuse R. R. Co., 14 N. Y., 750; Michigan S. and N. I. R. R. Co. *vs.* McDonough, 21 Mich., 165; Angell on carriers, § 214 *a*). But for the special agreement under which the plaintiff's cattle were transported, there would be but little doubt as to the defendant's liability for the damages caused by the want of proper care while detained at Dunkirk. Ordinary care and attention to the cattle during the delay would have prevented the injury. The liability of the defendant is, however, to be determined by the agreement of the parties. The railroad company, by reason of the written contract, occupied the position of a private carrier for hire, and is only liable for the performance of the duty undertaken according to its terms, or for some wrongful act, either willful or negligent. The agreement furnishes the extent of liability, unless a loss has occurred from the willfulness or negligence of the carrier. (Farmham *vs.* Camden and Amboy R. R. Co., 55 Penn. St. R., 53; Colten *vs.* Cleveland and Pittsburgh R. R. Co.)

The plaintiff assumed all risks of injuries which the animals might receive "from delays, or in consequence of heat, suffocation or the ill effects of being crowded on the cars," and also all risks of loss or damage in loading and unloading; and the agreement provided that the plaintiff should load and unload the stock at his own risk, the defendant furnishing assistance as required.

By another clause in the agreement, an agent of the owner was to ride free, and to be with the train to take the care and charge of the stock, and D. W. Barron is named as passed free in charge of the stock. The case states that it was proved on the trial "that the said cattle were in the charge of D. W. Barron as the agent of the plaintiff, and he accompanied them on the cars from Kentucky to Buffalo."

The provision in the contract for loading and unloading the cattle had respect to the terminus of the transportation, and not for loading and unloading at any intermediate station. There is no claim that the detention at Dunkirk was occasioned by the willful or negligent conduct of the defendant or its servants, or that the cattle were not carried to their destination as soon as they could have been, with reasonable diligence. The loss resulted from the delay, and in consequence of, "heat and suffocation, and being crowded on the cars." The loss was within the terms of the contract, and to be sustained and borne by the plaintiff, unless caused by the wilful act or neglect of the defendant.

The cattle were in charge and under the care of the plaintiff's servant and agent. No duty was devolved upon the defendant other than to transport them in proper cars, safely and with reasonable dispatch. The carrier did not undertake to look after the cattle or care for them, to water or feed them, or to guard against any of the necessary consequences resulting from delays or detention on the route. Whatever was required to be done to prevent injury and loss arising from such causes was to be done by the owner or his servant in charge of the cattle. The agent of the plaintiff testified that he could have arranged planks and taken the cattle from the cars, and thus prevented the injury, and did not because it was not his business. Had he undertaken to remove the cattle from the cars and been prevented by the defendant or its servants and agents, and loss had ensued, the defendant would have been liable. The recovery was had on the ground that it was the duty of the defendent's agents, upon request of the plaintiff's agent, to have unloaded the cattle at Dunkirk, if it could have been done by the exercise of reasonable care and diligence, and the jury were instructed to this effect. This was placing the responsibility of the care of the cattle upon the carriers instead of the owner. If, as the case shows, the cattle were in charge of and under the care of the servant and agent of the owner, the defendant was not chargeable for neglect of duty in not unloading them or taking any other care of them necessary for the prevention of injury or loss. The duty of the defendant had respect to the transportation of the cattle, and not the care of them while *in transitu*.

Again, this case falls within the general principle that he who seeks to recover damages which have resulted from the negligence of another, must himself be free from negligence contributing to the injury. The plaintiff's agent in charge of the cattle could have prevented all loss by himself removing the cattle, and his omission to do so, under the circumstances, was a negligent omission of duty directly contributing to the injury. If the agent of the owner had not been with the cattle to take care of them, the duty would have been upon the defendant to do what was necessary to guard against loss and damage during the detention; that is, to use proper diligence and care in looking after the cattle. (Clark *vs.* Rochester and Syracuse R. R. Co., *supra*; Hamilton *vs.* McPherson, 28 N. Y., 72).

The direct cause of the injury was the want of proper care of the cattle at Dunkirk, and is upon the evidence attributable to the plantiff's agent. If there was any obstacle interposed by the defendant to the unloading of the cattle, it should have been shown.

The judgment must be reversed and a new trial granted.

☞ The one hundred millions mortgage of the Pennsylvania Railroad Company has been placed on record in Recorder of Deed's office in Philadelphia. This mortgage is to secure the bonds that may from time to time be issued for the purpose of consummating the great improvement contemplated by the company in that State and elsewhere. It is probably the largest mortgage ever put on record in this country, but, large as it is, the works contemplated by the company, if carried out, will in all probability absorb bonds to full amount.

☞ The construction bonds of the Illinois Central Railroad Company, due April 1, 1875, are divided, the larger part being 7 per cent bonds, issued in 1851, payable in currency, and the smaller part 6 per cents, issued in 1867 and payable in coin.

The Cotton Crop.

The annual statement of the cotton crop of the United States for the year ending Sept. 1, 1873, as published by the *Financial Chronicle*, shows a total crop for the year of 3,930,508 bales, being an increase of 956,157, as compared with last year. The exports are 2,679,986 bales, and the home consumption 1,201,127 bales, leaving a stock on hand at the close of the year of 90,989 bales.

The following is a comparative statement of movements for the last two years:

	—Yr. end'g Sept. 1— 1871-2.	1872 3.
Receipts at the shipping ports	2,732,286	3,651,346
Add shipment from Tennessee &c., direct to manufacturers	122,065	141,500
Total	2,854,351	3,792,846
Manufactured South, not included in above	120,000	137,662
Total cotton crop for the year	2,974,351	3,930,508

The following will show the comparative yield in different sections as nearly as these can be divided:

	1871-2.	1872 3.
Louisiana	957,538	1,240,784
Alabama	288,012	332,457
Texas	197,956	343,450
Florida	19,359	14,068
Georgia	450,539	614,039
S. Carolina	271,241	374,476
N. Carolina	52 528	61,576
Virginia	276,098	433,583
Tennessee, &c	341,080	237,313
Manufactured at South	120 000	279,162
Total bales	2,974,351	3,930,508

The exports to foreign ports show a considerable increase, but not relatively as great as the gain in the crop. They may be summed up briefly as follows:

	1871 2.	1872 3.
To Gt. Britain	1,454,532	1,905,566
To France	189,634	252,903
To other ports	313,148	521,517
Total bales	1,957,314	2,679,986

The total consumed in the United States can never be given with perfect accuracy, but the annexed estimate is probably near enough for all practical purposes:

	North of Virginia.	Elsewhere.	Total.
1856-7, bales	665,718	154,218	819,936
1857-8 "	452,185	143,376	595,562
1858 9 "	760,218	167,433	927,651
1859 60 "	886,521	185,522	972,043
1860-1 "	650,357	193,383	843,740
1865-6 "	594,000	72,000	666,000
1866-7 "	690,000	80,000	770,000
1867 8 "	884,281	81,385	965,666
1868-9 "	846,756	79,498	926,254
1869-70 "	777,341	85,265	862 606
1870-1 "	1,072,426	94,542	1,166,968
1871-2 "	1,007,540	130,000	1,137,540
1872-3 "	1,063,465	137,662	1,201,127

The following is a comparison of the crop of each year since 1820. The total given as the crop of 1865-6 includes a large amount grown in preceding years, but not sent forward until the ports were opened; the period of the war has been filled up with accepted estimates:

	Bales.		Bales.
1820-1.	430,000	1847 8	2,347,634
1821 2.	455,000	1848 9	2,728,596
1822-3.	495,000	1849-50	2,096,706
1823-4.	509,158	1850-1	2,355,257
1824-5.	569,249	1851 2	3,015,029
1825 6.	720,027	1852-3	3,262,882
1826 7.	957,281	1853 4	2,980,027
1827 8.	727,593	1854-5	2 847,339
1828-9.	870,415	1855 6	3.527,845
1829-30.	976 845	1856 7	3,939,519
1830 1.	1,038,848	1857 8	3,113 962
1831-2.	987,477	1858-9	3,851 481
1832-3.	1,070,438	1859 60	4,669.770
1833-4.	1.205,324	1860-1	3,656 086
1834-5.	1,254,328	1861 2. (est.)	4,800 000
1835-6.	1,360,725	1862-3. (est.)	1,500.000
1836-7.	1,422,930	1863 4. (est.).	500 000
1837-8.	1,801 497	1864 5. (est.).	500,000
1838 9.	1,360,592	1865-6	2,154,476
1839 40.	2,177,835	1866-7	1,951,988
1840 1.	1,634,945	1867-8	2,430 893
1841-2.	1,688,574	1868-9	2,260,557
1842-3.	2,378,875	1869-70	3,114.592
1843-4.	2 030,409	1870-1	4,347,006
1844-5.	2,394,503	1871 2	2,974,851
1845-6.	2,100,537	1872-3	3,930,508
1846-7.	1,778,651		

The crop of Sea Island last year was 26,289 bales, against 16,845 in 1871-2.

The takings of the mills North and South have been as follows:

	Bales.	Bales.
Total crop of the United States as above stated		3,930,508
Stock on hand commencement of year, Sept. 1, 1872:		
At Northern ports	37,987	
At Southern ports	16,534	
At Providence, &c., Northern interior markets	4,766	
		59,287
Total supply during year ending Sept. 1, 1873		3,989,795
Of this supply there has been:		
Exported to foreign ports during the year	2,679,986	
Sent to Canada by railroad direct from the West	2 900	
Burnt North and South	1,000	
Stock on hand end of year,(Sept. 1, 1873:		
At Northern ports	65,883	
At Southern ports	25,106	
At Providence, &c., Northern interior markets	13,793	
	2,788,668	
Total taken by spinners in United States year ending Sept. 1 1873		1,201,127
Taken by spinners in Southern States included in above total		137 662
		1,063,465

The foregoing statement indicates that the mills North and South have taken from this crop 1,201,127 bales. If we now apply to the figures of the previous year, the statement of decrease of stock believed to be held by the mills, we shall have the following as the actual consumption of the mills for the years—

	1871-2.	1872-3.
Taken by Northern Mills	977,540	1,063,465
Taken by Southern Mills	120,000	137,662
Total taken from crop	1,097,540	1,201,127
Reduction of mill stock during year	40 000	.....
Total consumption of mills	1,137,540	1,201,127

These totals show an increase in actual consumption this year of 63,587 bales. If, however, the stocks held by Northern spinners are smaller than indicated above (as is generally believed in this market), their consumption has been somewhat larger.

The total gross weight of this year's crop reaches 1,824,920,023 pounds, and the average weight of the bales is 464 pounds.

Value of Foreign Coin.

The following is a copy of an act passed by Congress to establish the custom house value of the soverign or pound sterling of Great Britain, and to fix the par of exchange:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the value of foreign coin as expressed in the money of account of the United States shall be that of the pure metal of such coin of standard value; and the values of the standard coins in circulation of the various nations of the world shall be estimated annually by the Director of the Mint, and be proclaimed on the first day of January by the Secretary of the Treasury.

Section 2. That in all payments by or to the treasury, whether made here or in foreign countries, where it becomes necessary to compute the value of the sovereign or pound sterling, it shall be deemed equal to four dollars eighty six cents and six and one-half mills, and the same rule shall be applied in appraising merchandise imported, where the value is, by the invoice, in sovereigns or pounds sterling, and in the construction of contracts payable in sovereigns or pounds sterling; and this valuation shall be the par of exchange between Great Britain and the United States; and all contracts made after the first day of January, eighteen hundred and seventy four based on an assumed par of exchange with Great Britain of fifty-four pence to the dollar, or four dollars forty-four and four ninth cents to the sovereign or pound sterling, shall be null and void.

Section 3. That all acts and parts of acts inconsistent with these provisions be, and the same are hereby, repealed.

Approved, March 3, 1873.

☞ The Pennsylvania Railroad Company has received a Cable dispatch from London that the application for a loan of two million of pounds sterling (£2,000,000) under the new consolidated mortgage fo the company, dated July 1, 1873, were very largely in excess of the amount offered. The bonds are issued in sums of £200 each, and were brought out on the market by the London, Asiatic and American Company, the financial agents of the Pennsylvania Railroad Company, at 90 per centum, or £180 per bond, equivalent at the present rate of exchange to 90 per centum currency here.

☞ Contracts have been made for a truss bridge 190 feet in length, which will complete the Portsmouth and Dover Railroad bridge across the Piscataqua river at Dover Point. The cost of this truss will be $24,000.

☞ The grading of the Pennsylvania Railroad between Mifflin and Harrisburg, with the view of laying a third track, has been commenced.

FOR SALE.

Four new passenger Coaches for sale; two 60 passenger each, price $5,250; two 76 passenger-price $7,000 each, now ready for lettering. Also a 30 ton new Locomotive ready for use.

WELLAND CANAL
ENLARGEMENT.

Notice to Contractors.

SEALED TENDERS, Addressed to the undersigned, and endorsed "Tender for Welland Canal," will be received at this office until noon of

Saturday, the Eighteenth Day of October Next,

For the construction of fourteen Locks and fourteen regulating Weirs, a number of Bridge Abutments and Piers—the excavation of the Lock and Weir Pits—the intervening Reaches, Face ways, &c., on the new portion of the WELLAND CANAL, between Thorold and Port Dalhousie.

The work will be let in sections, six of which, numbered respectively 2, 3, 4, 5, 6, and 7, are situated between Port Dalhousie and St. Catherines Cemetery, and three (numbered 12, 13 and 14) extend from the northern side of the Great Western Railway to near Brown's Cement Kilns.

Tenders will also be received for the enlargement and deepening of the prism of the present Canal between Port Robinson and the Aqueduct at Welland; work to be let in sections, each about a mile in length.

Tenders are also invited for the completion of the deepening and enlargement of the Harbor at Port Colborne.

Maps of the several localities, together with Plans and Specifications of the work, can be seen at this office, on and after THURSDAY, the TWENTY-FIFTH day of SEPTEMBER instant, where printed forms of Tender will be furnished. A like class of information relative to the works north of Thorold, may be obtained at the Resident Engineer's Office, Thorold; and for works at and above Port Robinson, Plans, &c., may be seen at the Resident Engineer's Office, Welland.

All Tenders must be made on the printed forms supplied, and to each must be attached the actual signatures of two responsible and solvent persons, residents of the Dominion, willing to become sureties for the due fulfilment of the contract.

This Department does not, however, bind itself to accept the lowest or any Tender.

By order,

F. BRAUN.
Secretary.

Department of Public Works, Ottawa, 4th Sept., 1872.

RAILROAD IRON.

ENGLISH and AMERICAN RAILROAD IRON for delivery in New York and other markets in the United States. For sale by

WM. H. PETIT & PIKE,
72 Wall-st., New York.

LANSDELL'S
Patent Steam Railroad Water Station.

DISPENSES WITH Tanks, Tank Houses, Stationary Power, AND Attendance.

CAN NOT FREEZE IN ANY CLIMATE, UNDER ANY CIRCUMSTANCES.

COSTS LESS Than One Half the Price of a FROST PROOF TANK.

The Engineer in charge of the Locomotive attaches the Hose A to a steam valve in the boiler. Steam passed through the pipe D and slip joint F into the globe H, producing a vacuum; the water is then lifted through the pipes I I and forced through the column E and hose C into the tender, filling any ordinary tender in about three minutes. When steam is shut off all the water in the pipes returns into the well, and any condensed steam passes off through the drip valve G, leaving nothing to freeze. The handle B serves to turn the discharge pipe and hose in any direction. The water delivered into the tender is warm, thus utilizing the steam used. The discharge tubes, represented above made of hose, can be made of iron if preferred.

THE WHARTON

Safety Railroad Switch.

BOTH RAILS of the main track absolutely immovable, continuous and unmutilated.

This Switch provides perfect safety for both the main track and the side track, besides removing all switches from the main track as effectually as if there were no sidings on the whole line.

They have been in use on various important Railroads for over two years, and have repeatedly saved passenger trains from destruction, when running at high speed, (from 30 to 45 miles per hour,) at places where by accident the Switch had been left set for the siding.

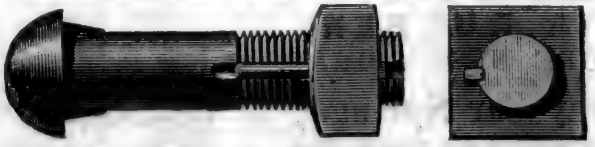
CONSIGNMENTS SOLICITED.



WM. COURTENAY, President. CHAS. F. COBB, Secretary.

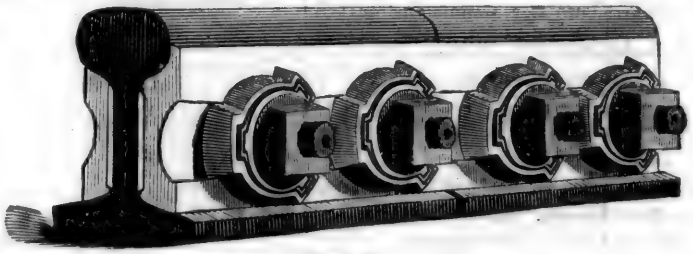
THE LOCK-NUT & BOLT COMPANY OF NEW YORK,

No. 61 Broadway, New York.

Manufacturers of all kinds of **BOLTS** for FISH-BARS, BRIDGES, CARS, MACHINERY, &c., with the "CUMMING NUT-LOCK," the only method of locking a nut to the bolt.

PATENTED June 16, 1868.

IMPROVED August 23, 1870.



Unequalled for Cheapness, Simplicity and Effectiveness.

DESCRIPTION.—A pointed copper key is placed in a groove cut in the threaded part of the bolt, *over which* the nut is screwed to its position, cutting its own thread in the copper, thereby taking up all the slack between the bolt and the nut. By riveting up against the face of the nut the projecting portion of the copper key, the nut is firmly locked in its position, but can be readily adjusted or removed with a wrench without injury to either bolt or nut.

Severely tested for over *four years*, they have *never failed*, and are *now in use on over fifty Railroads*, giving perfect satisfaction. We solicit a trial *anywhere*.

Licenses Granted to R. R. Companies, Car Builders and others.

PRATT'S PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,

IRON AND STEEL MANUFACTURERS,

No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

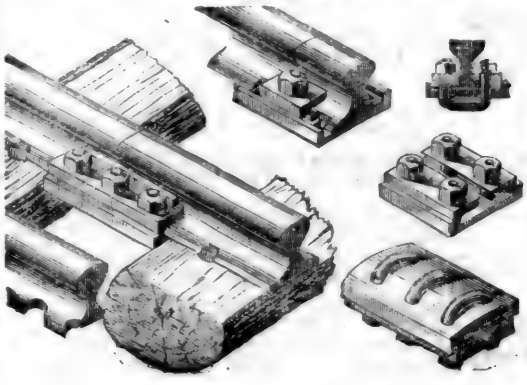
The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.



That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

FISHER'S PATENT

Wrought Iron

RAIL JOINTS,

MADE BY

FISHER & NORRIS,

TRENTON, N. J.

The Superiority of these Joints has been proved by eight years' use on different Roads.

That New Snow Plow.

In accordance with an oft-repeated determination to make note of all new and valuable improvements appertaining to railroad matters, it becomes our agreeable duty this week to make mention of Signor ABBIATTI'S great invention for clearing off snow and all other impediments from railroad tracks.

We had heard a good deal said about it by railroad people, and the great benefit they expected it to be in the long winter season on all our Northern roads, and especially the Prairie and Pacific lines. So we devoted Tuesday afternoon of this week to an investigation of its merits, and truth compels the admission that our trouble and curiosity were amply rewarded. Our columns will not permit us giving the readers of the JOURNAL anything more than a birds-eye notion of this useful machine.

We found an ordinary, though small, railroad track laid on a raised platform, and on this was a pretty good sized six wheeled working model, operated, of course, by hand. The plow proper somewhat resembled an irregular, upright cylinder revolving on its axis, or the lower section of a colossal Augur, with sharp, vertical and also horizontal flanges or blades. The diameter of this curious machine is fully equal to the width of any track, while its height will be from 6 to 8 feet. Just imagine this monster being shoved forward on the track, and worked at the rate of 500 revolutions a minute, by a 40 horse power engine! What must become of the snow, or indeed of any other obstruction short of a mountain on the track?

The upright blades are set at such an angle that the snow or other matter is whirled laterally quite clear of the track, and on whichever side may be desired.

In the event of a narrow cut, or gorge, the plow may be so adjusted as to throw the snow, &c., upon platform cars attached, and thus may be backed out and dumped; so on until any length of obstructed defile is cleared out.

The plow may have its engine of any required power, or may be affixed as head-piece to an ordinary locomotive, and will also serve admirably in lieu of the common "cow-catcher." In either case it will be attached and worked by the ordinary gearing and appliances. The Signor has also devised, and will operate in conjunction, a set of revolving brushes, which keep both tracks as clean as a parlor floor.

With some modifications, the machine is equally well adapted for use on our city lines. New Yorkers, in particular, we think, could appreciate its value. It may be worked either by steam or horse power.

While we were present, on the occasion stated, there was placed on the track a great quantity of sawdust, in imitation of snow; the little machine rushed along the track, and through these little hillocks, scattering and throwing the entire mass a long distance aside the track. Indeed the dust danced around in a manner most interesting to behold.

We candidly think this invention of Signor Abbiatti is by all odds the best thing in its line yet brought out; and we hear of several parties who are ready to give orders for machines as soon as a full sized one can be built and set to work.

We suggest to officers of railroads, city and otherwise, that they should lose no time in making themselves acquainted with the merits of this improvement. It may be interviewed any day at rooms 122 and 124 Trinity Building, 111 Broadway, New York.

How Railroads should be Financed and Built.

We have seen it stated recently in several daily papers, which assume to be more or less authority in such matters, that the business of railroad building in the United States was being overdone. This is a naked assertion without proof, and one which we cannot subscribe to. Our opinion on these subjects is, not that the business is overdone, but as now conducted is both wrongly and badly done. It is not our purpose to inquire at this time to what extent the present financial disturbance was caused by reckless railroading; nor shall we attempt to lay down any rules for the guidance of banks and banking houses in their dealings with, or support of, such enterprises. Our object is quite a different one, as will presently appear.

The construction of a line of railroad, whether long or short, is simply a question of finance and engineering. The whole subject is now so well understood, and so much reduced to a system, that cost and ultimate results can be almost as accurately predicted by competent engineers and experts before breaking ground, as can the expense of building a bridge or a barn.

Then why all this bother every now and then about bonds, suspension of work upon roads, &c? Simply because the matter has been conceived in dishonesty, or badly financiered. And this brings us to the main point intended to be made in this article.

A longer experience in these and like affairs than is possessed by any other similar paper in existence—having been established before a mile of railroad was constructed in the United States—gives this JOURNAL the right, perhaps, to have pretty decided views as to what is, and what is not, sound railroad policy.

How then is this oft recurring trouble respecting their bonds and finances to be obviated?

We answer, first; let no road be built at all unless the region of country which it is proposed to traverse already offers sufficient business, active or dormant, to pay, from the day of opening, its entire running expenses, and the interest, as it accrues, on all its bonds. Second; no railroad should be manipulated or officered except by men

of character and standing, and in whose fitness and ability the public can and do repose confidence. Third; the company's bonds should never be offered or seen on the market until at least one-half the entire line has been constructed and operated from six to twelve months, and its actual business and earnings practically ascertained.

In many cases large contributions in the shape of "local aid," are proffered. This is all very well, and not only harmonizes with and strengthens the general plan, but is especially valuable as indicating the necessity for a road, as well as a practical belief in its feasibility and success, by those best qualified to judge.

Just here we are of course met by the very pertinent inquiry: "How are we to build and equip our road at all unless we are allowed to use our bonds and credit?" We *will* use your credit, but in a far different, more effective and safer manner than is usually done.

We think it may safely be assumed that any new company which can place itself squarely on the foregoing platform, and honestly subscribe to its thrice simple propositions, will have but little difficulty in obtaining all needful capital.

Let all the company's bonds be securely locked up, subject to the control of no one or two individuals; then let a syndicate or association be formed of a sufficient number of capitalists who shall put up in cash the requisite amount for building and equipping the whole, if possible, or at least, one-half the line; the contracts to be made, the work to be done and the monies disbursed, subject to the closest supervision and scrutiny of the trusted officers and agents of the syndicate and the company, acting conjointly.

Thus the road will be economically and rapidly constructed, and when completed, whether wholly or in part, and its business and profits known and established, its securities will at once assume their proper value, and may then either be divided among those entitled to them as previously stipulated, or they may be put on the market with the certainty of obtaining their real value.

During the whole period of its existence, this country never required so many miles of new railroad for the development of its resources and business as at the present time; but henceforth these roads must be built upon some such system or basis as we have here briefly outlined. The events of the last few days clearly portend that the day of wildcat railroading and railroad stock and land jobbery is past, and we rejoice at it.

The money centres of our own country and of Europe, will not soon again be flooded with worthless bonds on roads running nowhere and having no existence or status except in the hopeful brain of the promoters, *al a* Trans-continental; and those only who have something tangible to sell will be able to realize, and only those having security to offer be enabled to borrow.

We have the assurance that in all such cases there is ample capital, both in our own country and in Europe, seeking just such investment; and the writer of this article takes this occasion to announce to all newly organized, sound companies, that he is prepared to receive proposals at the office of this paper for the formation of such Syndicates, and thus provide the capital necessary to carry through their enterprises to completion on the plan which is herein but imperfectly explained.

The Value of the Pound Sterling.

The Secretary of the Treasury has prepared a circular soon to be issued, inviting the attention of importers, exchange dealers, and the public generally, to the act, published in our last issue, establishing the custom-house value of the sovereign, or pound sterling, of Great Britain, and to fix the par of exchange, approved March 3, 1873.

By an usage, it says, dating back to an early period in our colonial history, the dollar has been rated as equivalent to fifty-four pence sterling; the pound, therefore, at $4.44 4-9, or £9 equal to $40. The dollar, which was the original subject of comparison, was the old Spanish silver dollar, or piece of eight, and the computation at the time was approximately true, as compared with the British silver money. In all transactions of exchange, involving the dollar and British money, the par was therefore assumed at fifty-four pence to the dollar, any differences from this par being attributable to premium or discount. The practice thus begun has been continued through all the changes, and they are considerable, which have affected the coins current in this country and Great Britain, during nearly two centuries, for the British standard is now gold, and the Spanish dollar no longer circulates with us; but our unitary dollar is a gold coin, worth nearly 9 per cent less than a dollar of fifty-four pence.

By a pure fiction, retained by usage only, and not by any law, exchange with Great Britain appears permanently against the United States, while our bonds are quoted at a fixed discount of nearly 8¾ per cent below their real value. The remedy for such anomalies is in the abandonment of the false par or valuation of the moneys of the United States in British money. The law, while prescribing the close of the present year as the term for the discontinuance of the old rating of exchange, does not prohibit, but rather invites an earlier change in the practice.

The Secretary recommends that the change be entered upon at once, and, with a view to facilitate this, he has caused to be prepared a series of tables (to be appended to the circular), which he trusts will be found to embody useful information, and aid in passing from an erroneous to a correct system.

Terre Haute and Indianapolis Railroad.

The earnings of this road for the year ending November 30, 1872, were:

From passengers		$264,058 54
" freights		780,231 75
" express matter		9,132 31
" U. S. mails		16,495 90
" miscellaneous sources		436 90
		$1,070,354 40
Expenses:		
Conducting transp	$203,741 22	
Motive power	224,360 45	
Maintenance of way	227,430 87	
Maintenance of cars	71,554 05	
		727,086 59
Leaving net transportation earnings		$343,267 81
The earnings in 1871 were		$1,002,720 74
And in 1872		1,070,254 40
Showing an increase for 1872 of		$67,633 66
The expenses for 1871 were		$591,787 63
And for 1872		727,086 59
Showing an increase of		$135,298 96

The increase in the expenses is principally in the maintenance of way: 1,104 tons of steel rails being charged in the operating expenses, amounting to $126,591 81. But for the substitution of steel rails for iron, the per centage of operating expenses would not have exceeded that of last year. A contract was made early in the year for 1,000 tons of Brown's steel rails, for 1873, on favorable terms. Our experience of the advantage in using steel rails is confirmed, and we recommend that about the same quantity be replaced yearly.

The earnings of the St. Louis, Vandalia and Terre Railroad, of which your company is lessee, were:

From passengers		$349,927 66
" freight		775,050 38
" express matter		22,117 62
" U. S. Mails		43,244 51
" miscellaneous sources		864 10
		$1,191,204 27
Expenses:		
Conducting transp	$273,011 01	
Motive power	200,872 07	
Maintenance of way	192,278 65	
Maintenance of cars	57,336 71	
		723,498 44
Leaving net transportation earnings		$467,705 83
The transp. earnings in 1871 were		$1,053,129 33
And for 1872		1,191,204 27
Showing an increase in 1872 of		$138,074 94
The expenses for 1871 were		$716,503 09
And for 1872		723,498 44
Showing an increase in 1872 of		$6,995 35

The First and Second Mortgage bonds of the St. Louis, Vandalia and Terre Haute Railroad Co., amounting to $4,500 000, ($3,500,000 of which are guaranteed by the lessee,) and $1,000,000 Income bonds, making a total of $5,500,000, bear seven per cent interest, and require $385,000 per annum to discharge the interest thereon. Thus it will be seen that the net earnings exceed the amount required to pay interest on the bonds by $82,705 83. The business of the road has increased equal to our anticipations and any doubt as to the wisdom of the construction of this short line, and the propriety of guaranteeing the pay ment of the principal and interest by your company is now removed.

During the past year $207,087 30 was expended in the extension of branches in the coal fields of Clay county, and purchasing equipment and providing other facilities, the necessity of which was referred to in our last report. It will be seen that earnings from the transportation of coal has increased from $209,046 07 in 1871 to $281,044 39 in 1872. For the purpose of further developing these fields and making as large an area as possible tributary to our road, further large expenditures should be made in the construction of branches and such permanent improvements in the way of elevated tracks as will facilitate and cheapen the handling of coal at the termini of the road. The rolling stock added in 1872 was thought to be ample to meet the necessities of the company; but the demands of the public for increased transportation facilities have proved to be inadequate. A further increase of rolling stock, extension of sidings, and other facilities required by a railroad to meet the increased traffic, and the means necessary for that object, should be provided. It is gratifying to be able to say that the line extending from St. Louis to Indianapolis, and known as the "Vandalia Line" has grown steadily in public favor, and now holds a conspicuous place among the great lines extending East from the Mississippi.

On the Terre Haute and Indianapolis Railroad November 30, 1872, there were 36 locomotives, 21 passenger, 9 baggage and express, and 960 freight, etc., cars; and on the St. Louis, Vandalia and Terre Haute Railroad, 28 locomotives, 14 passen-

ger, 8 baggage and express, and 924 freight, etc., cars. The mileage of engines on the former road was 816,350; and on the latter, 899,848—a total of 1,716,198. Number of through passenger carried on the former road, 81,192; way do., 118,805—total, 199,997. And on the latter road: through, 53,827; way, 123,706—total, 177,533.

GENERAL ACCOUNT.

Receipts:

From transportation	$1,070,354 40

☞ The stockholders in the Johnstown and Somerset Railroad Company have voted, 1789 to 836, instructing the board of directors to secure the right of way and extend the road from Johnstown to Sprucetown.

Railroad Signals—Want of Uniformity.

All travelers have of course observed the almost total lack of similarity in the signals used for the various purposes on all our different lines of railroad. On through lines, in the course of a single day, one may pass over three or four totally independent roads, and yet, to all intents and purposes, they form but one continuous route. Now, as the system stands, there is most likely an entirely new and distinct set of signals in use on each of these different roads, and it not unfrequently occurs that they are in diametric opposition to each other. The conductor and brakemen who accompany the train through, must need have their wits at hand, and their heads clear of cobwebs, in order to bethink themselves in time, and be ready at an instant's notice, a single whistle, it may be, to take action that is to save perhaps the lives of hundreds intrusted to their charge. When signals are reversed, or are given conflicting interpretations, all within an hour, it requires lively action of the brain on the part of those in charge—rather more so, we think, than is consistent with safety to the passengers. The same signs, as we have observed, often denote quite different and even wholly diverse meanings. The same style of flag may require stoppage at some insignificant way-station; then, again, it will be used to warn of a broken rail, a washed out culvert, or a weak and fatal bridge.

But why trouble our readers or ourselves to go further into details and proofs which are already too familiar. It is quite too apparent that the meanings given the various signals are entirely too diverse, uncertain and irregular.

Again, employees are constantly being changed from one road to another; then, as the signals in use on each are so different, the poor operative is required instantly to unlearn the meaning of those he has been familiar with, for years perhaps, and all at once commence operations under an entirely new and strange code. If, under these circumstances, he makes a mistake, or an accident occurs, he loses his position, and perhaps gets indicted by a grand jury, while the company, the only culpable party, goes scot free. Here, then, is glaring injustice added to all the rest.

Engineers, too, as well as other employees of railroad companies, are continually shifting. Imagine one who has been for years on the same road, running the same engine, and using all the time, the same signals. Now, it will, at the best, be some time before he can possibly accustom himself to an entirely different set of signals. It is well understood by all that the force of long habit is superior to any power of the reasoning facilities, more especially in the presence of great danger. How easy, indeed, at such a time for him, in the confusion or indecision of the moment, to mistake the signal to slow up, for what is intended as the warning of an open draw-bridge, and thus rush his whole train on to destruction. All this from a mere mistake, a little want of uniformity of signals. This same thing, too, is the unreported cause of numberless accidents—accidents followed up by the consoling sequel of a coroner's jury, "nobody to blame."

We have seen it proposed as a remedy for this state of things that the Congress of the United States pass an act establishing one definite code of signals which shall be obligatory on all the railroad companies, formed and to be formed, in the United States.

It is claimed that the General Government can lawfully do this by virtue of that clause in the Constitution which gives Congress the right to regulate commerce and navigation. This is, however, a question for the lawyers and law-makers. Certain, it is, State legislation cannot reach the evil complained of. For our part, we care not how or from what source the remedy comes, only let it be applied at once and effectually.

But our plan of obviating the difficulty is as follows: let due notice be given, and all the Railroad Presidents or Superintendents, we care not which, of each State, meet at the Capital, or other convenient point in such State, discuss the matter, and proceed to appoint a committee of from one to three to act in behalf of all the companies in that State. Then, on a given time, let these committees or delegates from every State and Territory of the Union meet at some central point, say Cincinnati or St. Louis, and after mature discussion and interchange of sentiments, proceed to arrange a national railroad signal code. There would be little or no diversity of opinion, and a session of two or three days would settle the whole thing. The code thus formed and promulgated would readily be accepted by every one, as being the best that the combined wisdom and experience of the railroad men of the country could devise, and would surely result in a great saving annually, of life, limb and property.

Though without legal sanction, such a convention would practically have the force of law; and, indeed, if deemed necessary this code might thereafter be enacted into a law, by Congress.

And while the question of railroad signals is being settled, that in regard to right of way, and right or left side, in case of double tracks, ought also to be considered. In the latter case, perhaps, there is no better rule than that which obtains on the turnpike and common road, where every one keeps to the right.

Though we have expended considerable thought upon these and kindred subjects relative to greater safety in railroad traveling, yet the foregoing ideas are thrown out in the hope that they may ere long be productive of more system in our railroad signal service, and of a greater degree of personal security to the great traveling public.

☞ The St. Paul *Press* says that the branch line of the St. Paul and Pacific, from St. Anthony to Brainerd, has been purchased by F. R. Delano, of St. Paul. By the terms of the purchase Mr. Delano agrees to complete the gap of unfinished road between Watab and Brainerd, about forty miles in length, before the first of December. Nearly all of this forty miles has been graded, and the ties and bridge material are on the ground.

☞ At a meeting the directors of the Grafton Center (Mass.) Railroad, held on the 16th inst., Hon. J. D. Wheeler was elected president, A. A. Ballou clerk, and Henry F. Wing Treasurer. Engineers are already engaged and the work of locating the road will begin at once.

☞ The New Castle and Franklin Railroad is completed to within five miles of Mercer, and is being lengthened at the rate of half a mile per day.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An asterick (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An asterisk (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "†."

American Railroad Journal.

Saturday, September 27, 1873.

Stock Exchange and Money Market.

The week, which has elapsed since our last review was prepared, has been, as far as Wall street affairs were concerned, one of unparalleled excitement, confusion, panic, and sensation. Uneasiness and distresses have been the predominating features in all business circles. The banks have been endeavoring to maintain their own position, while rendering all practicable assistance to their customers. The failure of the banking house, referred to in our last, was followered on Thursday by the suspension of Messrs Jay Cooke & Co, on Friday of Messrs Fisk & Hatch, and on both of those days, as well as on Saturday, by several other failures of less magnitude, but yet of an important and serious nature. The suspension of the Union Trust Co., of the National Trust Co., with that of the National Bank of the Common wealth, served to aggravate the trouble. Monday was a comparatively calm day. Tuesday opening hopefully, but closed feverishly, because of the announcement of the suspension of Messrs. Henry Clews & Co., and rumors of other failures and suspensions, and on Wednesday, the want of confidence was also quite notable. The Government action, in ordering the continuous purchase of Five Twenties, at equal to par in Gold, helped to relieve the unprecedented pressure materially. The action of the banks, in relation to the use of loan certificates, for clearing house purposes, also aided towards the same end. The closing of the Stock Exchange for several days tended to calm down the excitement and allow time to settle accounts, resulting from the extraordinary events of the closing half of last week. Up to the close, the panic and revulsion were substantially confined to the financial classes. The merchants, having had their business on an unusually solid foundation, were far less adversely affected than might have been anticipated. The blocking of the foreign exchange market, partly by the closing of the Gold Exchange, and the total derangement of Money affairs, were the chief sources of mercantile embarrassment, impeding very seriously the progress of commercial negotiations. Altogether the week was one of the most unfortunate in the history of financial affairs. There has been for several days, practically no Money market, and no quotations for accommodation. Loans and discounts have been almost impossible to obtain, on any conditions, and prices of Money have been utterly nominal. The very latest indications were more hopeful and encouraging. It was believed that the City had seen the worst effects of the financial storm, whatever might be the developments in the country. The city banks have shown a further material loss on their obligatory reserve, the last statement showing that they had $3,211,075 less than the 25 per cent reserve which the National banks are required by law to keep on hand. The U. S. Sub-Treasury, last week, increased its coin balance about $80,738, and reduced its currency reserve $6,297,925. Its currency reserves at the close of the week were $24,559,036; and its coin hoard, $53,034,165. The clearances of the city banks averaged through the week about 109½ millions a day. The specie reserve of the city banks according to the latest return is $18,844,600, against $12,399,500 same time last year. The city bank deposits are now $198,040,100 against $201,127,800 week ending Sep. 21, 1872. The legal tender reserve amounts to $34,307,900 against $44,467,000 same time last year. The circulation now stands at $27,414,200 against $27,668,100 same time last year. The loans are now $278,421,700 against $280,845,300 at this date last year.

There has been less doing in the Gold line. Speculation has been limited through the week. The customs drain has been moderate. The range of the price during the week as far as reported has been from 111@113⅛, and the quotation on Wednesday was 111⅜ against 111⅜ on Wednesday of the preceding week. The specie outflow last week, was only $500,478.

The customs demand for Gold last week, averaged $436,650 a day. The total customs revenue of the Government, in coin, at this port, since Jan. 1, 1873, has been $96,418,049 against $114,205,649 during the same time in 1872. Government has disbursed through the U. S. Sub-Treasury here, on account of the coin interest on the public debt, since January 1, 1873, $54,826,529, against $58,635,228 during the same time in 1872. The export drain of specie since January 1, 1873, has been $41,757,057 against $57,975,499 during the same portion of 1872.

Foreign Exchange was unsettled early in the week, and almost nominal through the closing days. The financial derangement prevented negotiations. Bankers' sixty day bills on London closed on Wednesday nominally at 106@106½; sight bills on London, at 106¾@107¼. The week's exports of Domestic Produce have been to the currency value of over 6½ millions.

Government securities, have been almost nominal in price, in the absence of other than Government dealings.

Railway Mortgage Loans have been wholly neglected, and utterly nominal as to values.

The Railway and Miscellaneous share speculation was very feverish and excited through the early part of the week, with values literally tumbling down, from day to day. The closing of the Stock Exchange put an end temporarily to all regular transactions, and during the later half of the week, business was unsettled, and values very difficult to ascertain.

General business has been seriously impeded by the financial disturbances; and values on most kinds of produce have been quoted much lower, especially for cash. Breadstuffs were particularly depressed, and all descriptions closed heavily. Provisions, and Naval Stores, declined and left off dull and weak. Cotton was much cheaper. Middling upland Cotton closing at 18 cts. per lb. Groceries favored buyers. Dry Goods were less sought after and closed less buoyantly. Ingot Copper is depressed and lower on a very slow movement; quoted at 25½c@26c., cash, and 27c. for forward delivery. Iron has been very quiet, with Scotch Pig held firmly and American Pig quoted weak, particularly No. 1; other kinds essentially unchanged. We quote nominally: Eglinton Pig at $45@$46; Glengarnock, $47; Coltness, $51@$52; No. 1 American Pig at $44@$46; No. 2 do. at $36@$38; English Rails at $64@$67, gold; American Rails at works, $75@$77; Old Rails, $46@$47; Wrought Scrap, $40@$45, from dock and yard. Pig-lead has been inactive but steady, with foreign quoted at 7c., gold, for ordinary, and domestic at 6¼c.@6¾c., gold. Spelter quiet, at $7 37½@$7 87½, gold. Pig-tin has been in limited demand, with Straits quoted at 30¼c.; English at 28¼c. Tin Plates have been dull, but steady. Charcoal Plates quoted at $10 62½@$11; Charcoal terne, $9 50@$10; Coke, $8 37@$8 75; Coke Terne, $7 37½@$8 25, gold, per box. Zinc wholly nominal. Tobacco and Wool steady, but inactive. Ocean freights lower and irregular, on a lighter movement. At the auction sale of Scranton Coal on Wednesday, 90,000 tons were disposed of at a shade easier prices, varying from $4 75@$5 35 per ton.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Ohio and Miss. consol., 90; do. consol. S. F., 90½; Boston, Hartford and Erie 1st mort., 28½; Burlington, Cedar Rapids and Minnesota 1st mort., 86; Canada Southern 1st mort., 73; Mil. and St. Paul 1st mort. Iowa div., 81; do. LaC. div., 85; Chicago and Northwestern Interest bonds, 96; Central Pacific State-aid bonds,

Inventors and Manufacturers of Railroad Improvements or Specialties,

Of whatever kinds, whether pertaining to the road proper, or to any branch or part of its rolling stock, should not fail to bear in mind that in the columns of this JOURNAL, they will have a direct and legitimate avenue through which to reach all the Railroad Companies and principal Railroad men of the United States and Canada. Besides, we have a wide circulation among the solid people of that class both in Great Britain and on the Continent of Europe.

All such parties, therefore, as desire to spread out the merits of their several articles before ready purchasers, in the columns of this paper, should not fail to call or address this office, giving some idea of their goods, or inventions, whereupon they will be duly advised as to the best method of accomplishing their purposes.

We must not omit to mention in this connection, that it is our intention to hereafter keep the public, and especially the Railroad portion of it, well advised of all new and useful Safety devices, particularly; hence if accidents occur through a niggardly policy, or other neglect to employ the latest and best improvements and preventives, all such companies will be held doubly accountable morally, as well as in damages before the courts.

Railroad Car Brakes.

We are every now and then inquired of to know which is the best and most effective car brake. Several very good ones have been patented—two or three, we believe, on the pneumatic principle—but as at present posted, we are in some doubt which to recommend. We wish the party having the best thing in this line, would let us and our Railroad Patrons know all about it.

Jay Cooke & Co's Suspension.

Probably no private banking institution ever existed in this country which carried on a heavier business, or was more favorably known, and whose suspension created more real alarm, regret and suprise, than that of the financial Colossus whose name stands at the head of this article. The fall of such a house, be it of ever so short duration, is indeed a national calamity. Certain it is that the heartiest sympathy and good will is expressed toward all the members of this firm, throughout this country and Europe, if we may judge from the tenor of the editoral columns of all our exchanges. The great and invaluable services performed by this house for our government during and since the late war gave it the well-earned prominence it subsequently enjoyed—that of second to none in this country. We are happy to state that we have good reasons for believing the present embarrassment to be temporary only. Money to the amount of many millions of dollars has been loaned by this firm to aid some of the greatest and most extensive railroad projects ever conceived by the mind of man; and though every dollar thus loaned is well secured, they were unable to at once realize sufficiently upon their securities to meet the enormous demands suddenly made upon them during a time of great financial stringency, and the house has therefore deemed it advisable to close its doors for a time. Those who have had the privilege of becoming well-acquainted with the character and ability displayed by Messrs. COOKE & Co. are loud in their assertions (and we think justly so), that no more far-seeing and honorable men ever existed, and that they will soon again resume their position in the very front rank of financiers. Not the least spot or stain rests upon their names, not a whisper even of defalcation or dishonesty is heard; and that is saying much now-a-days. The immense private fortunes of the five members of the firm will be turned over, if need be, to cover all liabilities as soon as the amount required shall be ascertained. Public confidence in each individual member remains unshaken, and we are pleased to state that the London branch house of Jay Cooke, McCulloch & Co. is not seriously injured by the embarrassment of the great American firm, but continues transacting its business with the Bank of England and other great monied institutions in Europe, enjoying meanwhile the unabated respect and confidence of all classes in the British Metropolis. Probably before the issue of our next number events will have transpired which will more than prove the truth of our assertions. Let us wait then, and wait in confidence. Such a house, whose very name is a tower of strength, whose resources are enormous, and still unimpaired, and the financial and social characters of whose individual members are so entirely above reproach, surely cannot fail.

☞ The earnings of the Erie Railway Company for the week ending Sept. 15, 1873, were $526,778, and since July 1, $4,415,035—an increase over the corresponding period of the previous year fo $368,802.

☞ William K. Kirkland, of New York, has been elected president of the New York, Housatonic and Northern Railroad Company.

Messrs. Fisk & Hatch.

Among the suspensions of prominent banking houses, none occasioned more surprise, and none elicted more general or more kindly and honorable expressions of sympathy than that of Messrs. Fisk & Hatch. This firm, of whose solvency there has been no question, were forced to succumb, temporarily, to the extraordinary Monetary stringency, which rendered it impossible for them to realize on their securities, with a view to meet the sudden and heavy calls upon them for loans and deposits, without involving sacrifices which some of their largest creditors deemed imprudent and unnecessary. With a view to the protection of the interests of all their customers, the firm deemed it but just that they should save the property, in the form of securities, which they had in abundance, while ready Money was unobtainable on any terms, by bankers or merchants. The firm promptly acted in this spirit, and appealed to their creditors for forbearance, until they could ascertain the actual condition of their affairs. This work has been about completed, and the house, having submitted the very satisfactory result to several of their friends and customers, have received assurances not only of indulgence, but of substantial aid. With this, and with the good wishes of all who have had dealings with them, through their eminently honorable business career, there is every likelihood that they will resume their old position very speedily.

☞ Contracts for building a railroad from Paola to Garnett, Kansas, have been let, and the road will be completed by April 1st, 1874. It will be known as the Holden, Paola and Fall River Railroad. The east end of the road is completed from Holden to Paola, and the western terminus will be the Arkansas river, thus intercepting the Abilene cattle trail, and making a direct route via the Missouri Pacific Railroad to St. Louis without change. The directors of the road are Messrs. Wm. Springs, E. S. Niccolls, E. S. Hunt and G. W. Iler, of Garnett; Col. Goss, of Neosho Falls; Major Williams and Mr. Smith, of Ossawatomie; Mr. Crowell, of Paola, and Judge Hanway, of Lane.

☞ The Philadelphia *Ledger* reports the total anthracite coal tonnage for the week ending September 13, at 506,312 tons, and for the coal year 13,858,657 tons, against 13,371,876 tons to corresponding time last year, being an increase of 486,881 tons. The bituminous tonnage for the week is 78,612 tons, and for the year 2,215,378 tons, giving a total of all kinds for the week of 584,924 tons, and for the year of 16,074,035 tons, against 15,328,795 to same time last year, being an increase of 745,240 tons.

☞ Surveys for the Chicago, Millington and Western Railroad have been completed to the Mississippi river, and the engineers are now engaged in mapping out the route. A convention is to be held in Chicago on the 9th of October to devise means for forwarding the construction of this projected line.

☞ The Lafayette, Muncie and Bloomington Railroad Co. have elected an entire new board of directors, with O. W. Pierce, President, John Green, Vice President, and John W. Heath, Treasurer.

Incombustible Roofing Material.

No structures in the world require so thorough protection against fire as the Sheds and Depots, and other buildings along the immediate line of our Railroads—exposed, as their roofs constantly are, to showers of sparks and ignited cinders from passing Locomotives. Our railroad friends in all parts of the country are continually complaining, and writing us to inquire if there is any known material wherewith the roofs especially of such buildings can be protected from this ever-present danger. If any body in the world has got a really good invention or article that will accomplish the purpose, and cure the crying evil named, such persons ought forthwith to make its merits known through the columns of this Journal to all the railroad companies of this country and Canada. Surely publicity of this sort would be of immense and direct benefit to both parties. Really, the inventive genius of the country ought to be equal to the exigencies.

Lumber Preserving Processes.

In reply to several letters received from the various persons in the lumber districts of Michigan, inquiring as to the quickest and best method of curing or seasoning lumber, we can only say, on that subject our stock of information is very limited, and as at present advised should not feel warranted in recommending either this or that method.

There is a steam-seasoning process we have heard favorably spoken of; then there is the French method, quite extensively used in that country, where boiling water and a solution of borax are employed to remove the albumen and other destructive properties existing in the wood. But, as intimated, we have not as yet sufficiently investigated any one to be able to give it the preference over another.

In denial of the rumor that the Pennsylvania Railroad Company had some financial difficulty, the Philadelphia *Ledger*, after making inquiry in the proper quarter for reliable information, says that the finances of the company were never in better condition, the whole business of its treasury moving easily and smoothly. It is demonstrated beyond peradventure that the gross receipts of the company for the current year will exceed twenty-five millions of dollars, and to meet the current expenditures for contemplated improvements the company has a credit abroad for ten millions of dollars, against which but little over one hundred thousand has been drawn. The officers of the company express themselves sanguine as to the payment in cash of the usual semi-annual dividend of five per cent in November—have no more doubt of it than they have had at this same length of time before the period of payment at any time in the past. With nearly ten millions in London subject to call, and the importance to the company of maintaining dividends, there would seem little reason for doubt on the subject.

☞ The Newport Street Railway Co., with $25,000 capital, has been organized to build a street railroad from the Suspension bridge in Cincinnati to the corner of Fourth and Vine streets. The corporators are: John A. Williamson, Henry Morton, John G. Isham, Lawrence Williamson and David S. Carrick.

[From the "New York World," September 17.]

A NEW SNOW PLOW.

A private view was afforded yesterday of a Liliputian model of Signor Abbiati's Track and Snow Cleaner which seems fitted to do away with the blockades that are the wintry scourge of Northern railroads. The machine, which will be of different calibre proportionate to the various degrees of climate in which it will be used, is an oblong structure, weighing about as much as an average locomotive, and propelled by a powerful engine, at the head of which a sort of circular saw of immense size and power is suspended. This saw or fan, which in a machine of average size will be from 4½ to 6 feet in height, and will weigh from four to five tons, is worked by a separate engine set in the body of the machine, entirely disconnected with the propelling power. The advantages of this separation of forces are obvious. While the propelling power keeps the machine in position, the fan impelled by the other engine will have time to dig at the snow at its leisure. No amount of snow and ice, of whatever hardness, apparently, will be able to resist the inroads of this weighty saw revolving with great rapidity. The fan, too, is so contrived that it flings the snow at such a distance that it cannot be clogged by its flying back. In forcing a passage through a snow-bank that extended high on each side of the track, so that the accumulations upon it of the snow forced out of the way would be only a choice of evils, the fan can throw the snow entirely over and behind the machine onto platform cars ready to receive it. In the machine intended for use on street railroads, to be drawn by horses, the fan is placed in the middle, but the principle is the same. Experiments were made with the model yesterday, in which sawdust was used in place of snow, and the little engine, with the utmost ease, scattered to the four winds piles of that material.

A working model of the machine is now on exhibition at Rooms 122 and 124 Trinity Building, 111 Broadway, from 9 A. M. to 4 P. M.

☞ The Providence and Worcester Railroad Corporation has decided to build the long contemplated branch from Valley Falls, through Cumberland, Attleboro' and Pawtucket, to Bold Point in East Providence, for the transportation of coal and other freight, which now has to be transported by horse power directly across the city of Providence. The track will be laid with steel rails, and the road bed made with reference to four tracks ultimately.

☞ The two centre sections of the arch between the western abutment and pier of the new bridge at St. Louis, have been completed. Each consists of an upper and lower arch, and their completion is regarded at St. Louis as "one of the greatest triumphs of engineering skill in the world." It is expected that three grand arches of the bridge will be finished by December.

☞ The development of the Virginia coal and iron fields promised by the opening of the Chesapeake and Ohio Railroad, is going forward rapidly. Already seventeen coal miles have been opened along the road, and seven iron beds, while twelve iron furnaces are already or nearly in operation, with an annual capacity of 120,000 tons of pig iron.

Journal of Railroad Law.

RAILROAD COMPANIES—RESPECTIVE DUTIES OF COMMON CARRIERS AND OWNERS IN REFERENCE TO DELIVERY OF BULKY FREIGHT.

The late case of Goodwin *vs.* The Baltimore and Ohio R. R. Co., (50 N. Y., 154), was an action brought to recover damages alleged to have been sustained by the plaintiffs, through the negligence of the defendant, in not caring for and protecting from rain a lot of sheet iron consigned to plaintiffs, which had been brought from Baltimore in the Steamer Carrol, belonging to the defendant.

The Carrol arrived at her wharf, pier No. 13 East River, on the 4th or 5th of September, and immediately sent notice to the plaintiffs, whose store was less than eighty rods distant from the pier, and landed the iron on the pier in the usual way in which iron is landed. A part of the iron was piled on the side of the pier near the street (South Street) and the residue in two piles at the southeasterly end of the same pier. It was piled in a space by itself, and separate from all other cargo. That part which laid near the street was taken away by the plaintiffs.

The vessel began discharging freight on Monday and finished Wednesday. On Friday a heavy shower occurred, by which the iron was wet and rusted. The iron could have been removed in one day.

The following is the opinion of the court delivered by—

RAPALLO, J.—Where bulky articles of freight are landed from a vessel in the customary manner upon a public wharf with due notice to the consignee, and he thereupon pays the freight and takes steps toward removing them, and is afforded a reasonable opportunity to do so, but unnecessarily delays that operation, and in consequence of such delay on his part they are injured by inclement weather, the carrier cannot be held responsible for such injury. It is not his duty to store the goods after the consignee has paid the freight and signified his intention to remove them, and is apparently about to do so. If, after the consignment has been thus accepted and the goods have been separated from the rest of the cargo and the consignee has been afforded a reasonable time to remove them, he voluntarily or negligently allows them to remain upon the wharf, he does so at his own risk, and it is his duty and not the carriers to protect them from the weather.

Where, instead of being landed upon a public wharf, the goods are placed in a depot or storehouse or other premises of the carrier, they being in his actual custody, he his bound to take ordinary care of them notwithstanding unreasonable delay by the consignee in removing them. And where the consignee cannot be found, or after notice refuses to receive the goods, the carrier is bound to take care of them or put them in a place of safety for the benefit of the consignor or owner.

In all these cases, after his duty as carrier has been discharged, he becomes a species of involuntary bailee, and his only means of relieving himself of the custody of the goods is by placing them in the hands of some responsible warehouseman.

But the principle of these cases does not apply where the consignee is present, accepts the consignment and pays the freight, and the goods are landed on a public wharf, with notice to him, and he is afforded a reasonable time and opportunity to take charge of and remove them. Their legal custody is then transferred from the carrier to the consignee, at least where the latter is owner of the goods or bound to accept them. (Chickering *vs.* Fowler, 4 Pick., 371; Cope *vs.* Cordova, 1 Rawle, 203). Whether ina case where the consignee was not the owner the carrier would owe any further duty to the true owner in case of the neglect of the consignee to remove the goods, it is not now necessary to consider, this action being between the carrier and the consignees.

In the present case, the parcel of sheet iron in question lay separated from the rest of the cargo and piled up by itself at the end of the pier (which was a public wharf), for several days after notice to the consignees of its arrival. They had paid the freight upon it at the time of receiving the notice, and had sent their carman several times to remove it and had removed another parcel of the same consignment. The main contest at the trial was upon the point whether a reasonable opportunity had been afforded to the plaintiff to remove the parcel in question, before the storm by which it was injured, the claim upon the part of the plaintiffs being that the defendent had so obstructed the wharf with other portions of the cargo that the carman could not remove the parcel in question before the storm, and the defendant controverting this and claiming that the omission of the carman to remove it was owing to his own negligence and misconduct, and that with proper diligence he had ample time to remove it before the damage occurred. The evidence upon these points was conflicting, and they were submitted to the jury. The judge in the first instance complied with the request of the defendant's counsel to charge the jury that if the plaintiffs had a reasonable time to remove the iron or to put it under proper care and custody before the storm they could not recover, but afterward in delivering his charge, the judge departed from this view and charged in substance that even if the plaintiffs had a reasonable time, then from the time that the reasonable period for the removal of the goods expired the defendant became liable as warehousemen, and if proved to have neglected to take that degree of care of the property which is required of warehouseman, it was liable, though its duty as common carrier was ended. For the reasons above stated, we are of opinion that under the circumstances of this case, the latter instruction was erroneous, and that the judge should have adhered to the first position.

The judgment must therefore be reversed and a new trial ordered.

Judgment reversed.

☞ The latest estimates announce that the cost of the construction of the proposed line of railway from Buenos Ayres to the Andes, by way of San Juan, will reach $26,000,006, and that among the chief obstacles in the way are the necessity of a tunnel nearly two miles in length and a shed covering for nearly the entire road, as a protection against the heavy snows of the Andes.

☞ The Germantown, Pennsylvania, *Telegraph* thinks the iron product of that State can be easily doubled in a few years if the requisite capital and railway facilities can be obtained.

Pennsylvania Railroad.

It is estimated that upwards of $5,000,000 will be expended on the improvements in and near Jersey City by the Pennsylvania Railroad Company. To begin with one of the most conspicuous, but almost the least in importance, of their works, there is the new passenger depot, the foundations of which are just being laid close to the site of the present depot. The approaches to this new depot from the New York side will be through six ferry slips, which will extend out into the river 100 feet further than the old ones. Passengers will step from the ferry-boat into a waiting room 100x84, adjoining which are ticket offices, restaurant, retiring rooms, &c. Doors will also communicate from the waiting room to the depot, which is 580 feet long and 156 feet wide. The structure will rest on four rows of oak columns, making three spans, two 86 feet in width, and one intermediate one of 84 feet. The roof will be made of wooden rafters and iron truss-work, tastefully ornamented. Eight tracks will be laid in the depot, and there will be five platforms running down between them. The cost of this will be between $400,000 and $500,000, and the work is to be finished about the 1st of January next. Four acres of land will be comprised under the roofs of the depot buildings, all of which is made land, formed by driving down piles and then filling in with earth and stones.

Leaving the sound of the pile-driver behind and proceeding out over the road as far as Marion, a distance of about three miles, one comes upon new evidences of the industry and enterprise of this giant corporation. It is here that the company have decided to build their new shops to supply the needs of their Eastern branches. They have purchased a broad strip of land extending all the way from near the Marion watch manufactory west to the Hackensack river, and every square yard of this land is to be covered with side tracks and buildings. Whole regiments of men are here at work. In the first place the whole space has to be filled in and raised several feet, so as to bring it up to a level with the main track.

Seventeen tracks will be laid side by side, or as many as can be laid. Within a stretch of a few thousand feet there will be about fifteen miles of track. Among the buildings now in course of construction or finished at this place, is a shop built in the form of a circle, 400 feet in diameter, where freight cars are to be constructed. Next to this, toward New York, is a shop 400x135 feet for painting, upholstering and finishing cars.—Then come the transfer tables, covering a space 480x60 feet, for making sheet-iron and boilers and constructing locomotives. Then there is a blacksmithing shop 155x120; a planing mill 135x70, a boiler and engine house 80x50, a dryer 65x30, besides a lumber shed 100x60, an oil and waste house, and a round house 300 feet in diameter, capable of accommodating twenty-four engines. A little farther down the road towards the Hackensack river, is the coaling station, where a locomotive is to be supplied with coal in three minutes. The coal is all drawn up an incline plane and deposited on a staging. The locomotives will run in under the staging and the coal will be shot down into the tender. Close to the east bank of the Hackensack river is the new abattoir, 842 feet long. The cars loaded with cattle and hogs will be run in close to the slaughter house and their burdens deposited—hogs in one end and calves and bullocks in the other end. It is the intention to bring the slaughtered meat to New York in boats, running down the Hackensack and up New York Bay. The company will have side tracks enough between the Hackensack river and the village of Marion to accommodate 2,200 cars at a time. It is expected that all these structures will be completed within one year.

But all of this is not so much as one half of what remains to be seen. Turning back and going towards Jersey City by the same road, a distance of about a mile, Baldwin avenue is reached, where now the railroad takes a sharp turn to the right to get around the lower end of Bergen Hill,

after which it proceeds in an almost straight line down to the North river at the foot of Montgomery street. Now, however, a new line is being cut through the hill, coming out about a quarter of a mile further up the river than the old line, where the company have acquired new and vast possessions of land on the water front.

The old line is not to be abandoned, but it is to be retained for passenger trains, the new cut being intended for freight trains exclusively. The road will then have two termini, one at the foot of Montgomery street for passenger trains, where the new depot is building, and another for freight at the foot of Sixth street.

From the eastern end of the cut the trains will run down through the city over trestle-work a mile and a half long, which is already built. The trestle is forty feet high, where it connects with the cut through the hill and twenty feet high at the water-front. Freight trains through from St. Louis will be rolling in through this cut and over the trestle-work in less than one year from this time.

The present plan for laying out the immense depot for the reception and transhipment of the cereals and minerals of the West, besides the merchandise, is to construct three docks, extending from the mainland to the bulkhead line, each dock to be separated from the other by a water basin large enough to receive an ocean steamer and half a dozen small craft beside. Trains are to be run down each dock, not in the centre, but sufficiently on one side to give room for a warehouse one hundred feet wide and one thousand feet long. On the other side will be a simple platform, to facilitate the unloading and reloading of trains. From each of these long docks will be built one or two piers, varying from forty-two to eighty feet in width, and extending into the river five hundred feet. The outer end of these piers will be very high, so that vessels lying on the water around them will at all tides be far below. The trains loaded with grain for foreign markets will reach the pier by going up an inclined plane. When in position the doors will be opened and the contents of each car poured into the hold of the vessel below. The company already have one of these docks nearly completed on the southern side of their property, so that the plan is no longer a mere idea. There stands the warehouse, one thousand feet long by one hundred feet wide, and throughout its length and breadth ring the strokes of a hundred hammers and axes in the hands of carpenters who are finishing the inside work.

One of the piers is nearly finished, and already a steam locomotive has been up and looked over the end of the broad river. Three water basins have been laid out between the docks by the engineers, their dimensions being as follows; 1, 200x180 feet, 1,500x180 feet and 1,900x160 feet. At present the water in these basins is not deep enough to admit ocean steamers, and some difficulty is in the way in the shape of rocks. For the present the cars will deposit their contents into lighters, which will go out and tranship the cargoes to the large steamers. The company intend, at some future time, to build coffer dams around their basins, and take out the rocks by blasting. The company have also made excellent arrangements for conveying such of their cars as are loaded with freight and merchandise for New York and the Eastern States across the river on floats, and sending them on their destination by other lines.—*N. Y World.*

The Susquehanna River Bridge.

Several conflicting statements have recently been published relative to alleged contemplated renewals of the bridge over the Susquehanna at Havre de Grace, and which have led the public to believe that the entire present wooden structure is to be taken down and an iron one erected in its place, but such is not the case. A few weeks ago the management of the Philadelphia Wilmington and Baltimore Railroad contracted for a single span of the bridge, to replace one that was damaged by a tornado. Proposals were invited for the work, to be executed in iron, and the contract was awarded to the Baltimore Bridge Company, as heretofore stated. The iron work is now being prepared at Wilmington, Del.—*Baltimore Sun.*

Commerce of New York.

The foreign imports at New York for the month of August, 1872 and 1873, are officially stated as follows:

	1872.	1873.
Entered for consumpt'n.	$23,353,773	$18 383,799

Railroad Extensions in Massachusetts.

Of new road, about 50 miles have already been constructed, or opened this year, which is more than the average rate of increase for some years past. The Springfield, Athol and Northeastern Extension to Springfield—16 miles—will probably be finished in October, and work is actively proceeding on the extension of the Ware River road from Gilbertville to Winchenden—28 miles—of which seven miles is already completed. Work, we believe, is also going on on an extension of the Boston, Barre and Gardner. A branch of the Worchester and Nashua road is also being built from Manchester to Hudson, 7 miles. The Massachusetts Central has between 70 and 80 miles under contract, a part of which is to be done this year, while the remaining 20 miles of the line is being located. Last and most important of all, is the Hoosac Tunnel, which is to be completed this year. Most, if not all, of these lines, except the tunnel, are mainly of local importance, although it is reported that the Boston and Lowell Company intends to extend its new Middlesex Central line eventually to Fitchburg, there to connect with the line to the Hoosac Tunnel.

Of projected roads, on which work is not yet begun, the only line which seems to promise much is the Lowell and Andover, from Lowell to Ballardvale, on the Boston and Maine, eight miles. This, it is said, is intended not only to give a line from Lowell to Boston, but also to enable the Boston and Maine to forward eastern freight to or towards New York over the Boston, Clinton and Fitchburg's Lowell and Framingham Division and its New Bedford line. The Worcester County Central is yet only in the stage of talk, and the Springfield and Longmeadow seems to depend mainly, if not entirely, on the action of Springfield in voting aid. Nothing has been done about the proposed branch from the New Haven and Northampton to Springfield, and the Lee and New Haven Company has stopped work altogether since the failure to obtain an extension of the State grant of aid, though it is said the company intends to make another trial next year.—*Whitney's Railway Chronicle.*

New York and Norfolk Railroad.

The *Eastern Virginian*, published at Onancock, Accomac county, has the following:

At a meeting of the New York and Norfolk Railroad Company, held at Accomac Court House, Va., on the 9th day of September, Hon. Henry B. Wright, of Pennsylvania was elected president of the company, and Hendrick B. Wright, Isaac Carpenter, Amos Y. Smith and Solomon Stormer, of Pennsylvania, Custis W. Wright, of Delaware, and William H. B. Custis, John W. Gillet, Upshur B. Quinby, and William T. Fitchett of Virginia, were elected directors of the said company. And at a meeting of the board of directors, held at the same place on the same day, Custis W. Wright, Esq., was appointed treasurer, and Upshur B. Quinby, Esq., was appointed secretary of the said company. The company propose to commence the survey of the route for the road about the 20th of October next, and after a little piece of special legislation is put through work will immediately commence; so that we may confidently expect to have the road completed and cars running as far as Drummondtown by the 4th of July next.

LANSDELL'S

Patent Portable Railway Syphon.

The Portable is invaluable on a freight or construction train, being used to take water at points where there are no water stations. With it water can be taken from any point within one hundred feet of the track where there is water six inches or more in depth. The valve C is tapped into the locomotive boiler; steam is let on through the hose B, water is drawn through the orifices D D, and forced through the hose E into the tender, filling any tender with warm water in from six to twelve minutes.

Lansdell's Patent Steam Syphons, Double Suction, adopted by the United States Board of Supervisors, and approved by the Secretary of the Treasury for use on Steamboats.

For Price and particulars, apply to the General Agents of the Steam Water Station Company,

WELLAND CANAL
ENLARGEMENT.

Notice to Contractors.

SEALED TENDERS, Addressed to the undersigned, and endorsed "Tender for Welland Canal," will be received at this office until noon of

Saturday, the Eighteenth Day of October Next,

For the construction of fourteen Locks and fourteen regulating Weirs, a number of Bridge Abutments and Piers—the excavation of the Lock and Weir Pits—the intervening Reaches, Face ways, &c., on the new portion of the WELLAND CANAL, between Thorold and Port Dalhousie.

The work will be let in sections, six of which, numbered respectively 2, 3 4, 5, 6 and 7, are situated between Port Dalhousie and St. Catherines Cemetery, and three (numbered 12, 13 and 14) extend from the northern side of the Great Western Railway to near Brown's Cement Kilns.

Tenders will also be received for the enlargement and deepening of the prism of the present Canal between Port Robinson and the Aqueduct at Welland; work to be let in sections, each about a mile in length.

Tenders are also invited for the completion of the deepening and enlargement of the Harbor at Port Colborne.

Maps of the several localities, together with Plans and Specifications of the work, can be seen at this office, on and after THURSDAY, the TWENTY FIFTH day of SEPTEMBER instant, where printed forms of Tender will be furnished. A like class of information relative to the works north of Thorold, may be obtained at the Resident Engineer's Office, Thorold; and for works at and above Port Robinson, Plans, &c., may be seen at the Resident Engineer's Office, Welland.

All Tenders must be made on the printed forms supplied, and to each must be attached the actual signatures of two responsible and solvent persons, residents of the Dominion, willing to become sureties for the due fulfilment of the contract.

This Department does not, however, bind itself to accept the lowest or any Tender.

By order,

F. BRAUN.
Secretary.

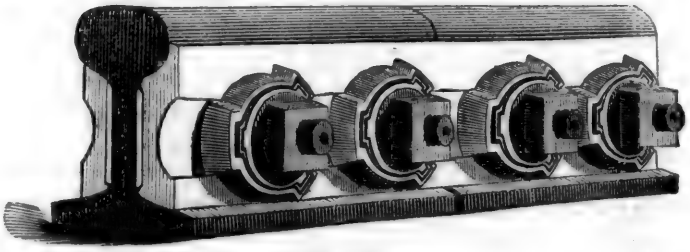
THE LOCK-NUT & BOLT COMPANY OF NEW YORK,

No. 61 Broadway, New York.

Manufacturers of all kinds of **BOLTS** for FISH-BARS, BRIDGES, CARS, MACHINERY, &c., with the "CUMMING NUT-LOCK," the only method of locking a nut to the bolt.

PATENTED June 16, 1868.

IMPROVED August 23, 1870.



Unequalled for Cheapness, Simplicity and Effectiveness.

DESCRIPTION.—A pointed copper key is placed in a groove cut in the threaded part of the bolt, *over which* the nut is screwed to its position, cutting its own thread in the copper, thereby taking up all the slack between the bolt and the nut. By riveting up against the face of the nut the projecting portion of the copper key, the nut is firmly locked in its position, but can be readily adjusted or removed with a wrench without injury to either bolt or nut.

Severely tested for over *four years*, they have *never failed*, and are *now in use on over fifty Railroads*, giving perfect satisfaction. We solicit a trial *anywhere*.

Licenses Granted to R. R. Companies, Car Builders and others.

No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

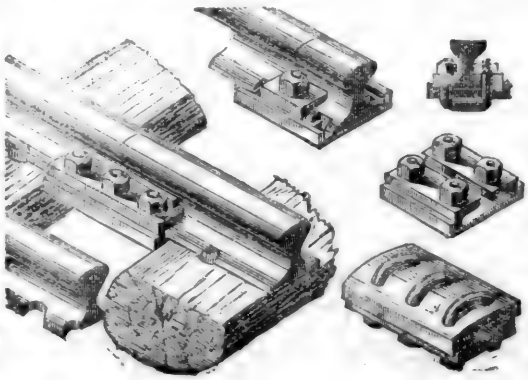
The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.



That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

Railroad Bonds—How Affected.

The question is frequently asked, "what will be the effect of the late monetary spasm on Railroad Bonds?" particularly those of new and incompleted roads. Inasmuch as there are several classes of railroad bonds, no one answer will meet every case. In railroad securities, as in every other species of property, there are distinctions as widely as those of any other class of property. It is well-known that the issue of bonds by railroad corporations grew out of the uncertainty and fluctuations of share property, and have been so popular as to almost supersede capital stock as means for building roads. Formerly roads were built mainly or wholly by subscriptions to stock; now they are largely built by bonds secured by a mortgage on the property. Capitalists prefer to hold the lien of a mortgage, to that of proprietary ownership.

So long as our laws are executed, therefore, there need be no apprehension of a loss of real value in good railroad mortgages. Those which were good before the panic are no worse now. The market price may be lower; but that depends on the scarcity of money. First mortgage bonds on roads which are completed, with scarcely an exception, will be found to suffer less in estimation than other species of income-bearing property. Roads that are but half built, or roads that are laid through the western unsettled country, may have to wait a few years before the business grows up to a point where expenses and interest can be met out of traffic receipts. There are but few such roads in America at this time. Notwithstanding the haste, and in some cases the extravagance, with which they have been constructed, not two-and-a-half per cent of the railroad mileage of the entire country has fallen in arrears of its interest on first mortgage debt. For the floating debt incurred, creditors in many cases must be content to wait as in any ordinary commercial business. Considered as a whole, the railroad industry of the United States, both old and new lines, was never more busy, never more prosperous, and a general improvement in finances is sure to follow for all roads that are now in operation.

At the same time, there must be a postponement of nearly all new or projected lines. This is especially true of lines designed merely as competitors to draw off the traffic of existing lines. Most of these will be put back from five to twenty years. For this the western farmers agitation may be credited. They have not only crushed the only rational remedy for their grievances—more competition—but have strengthened the existing lines, which they denounce as monopolies. It is obvious that a large number of small borrowing corporations are swept from the field for a long time, there will be less fierce competition for loans among the survivors who will have the field left to themselves. For these, among other reasons, we should predict a decidedly better prospect for the holders of railroad bonds, on productive roads.

☞ The East Alexandria Railroad, which is designed to connect the Baltimore and Ohio Railroad with the Orange and Alexandria Railroad, by means of a ferry across the Potomac, is being pushed rapidly forward, and it is expected that the proposed connection will be made early next year.

Car Brakes—Stopping of Railway Trains.

Many of our readers are aware that for some time past careful experiments have been made on the Baltimore and Ohio Railroad by Mr. Wm. Loughridge, of Baltimore, Md., for the purpose of stopping railway trains quickly and for stations. The company first tried the Westinghouse air brake and carefully noted the results. They then had their master mechanic, J. C. Davis, to examine plans and specifications submitted by Mr. Loughridge, whose long experience in brake matters is well known to the country. This resulted in the equipment of a local train that ran from Baltimore to Winchester, Va., for over one year, making upward of twenty-five thousand stops without accident. In the mean time the cars belonging to the Baltimore and Ohio Company, running from Washington to New York in the through line, were equipped to work in conjunction with the Westinghouse brake, and have worked well. Then a train of ten cars and several engines were equipped on the Washington branch, with which a series of interesting experiments are now being made with a view to securing the best possible results before the other trains are equipped. These experiments were to determine the uniformity of action and effect of the brake. They were made on three separate days with the following results, which are deemed extraordinary. Three trips were made from Baltimore to Washington with a local train consisting of six cars for two of the trips, and seven cars for the third. On the third trip the cars were loaded to excess, as passengers were going to camp meeting. The first trip was made with engine No. 318, William Galloway, engineer, and the time required to make the stops noted by one person appointed by the company and the other by Mr. Loughridge. Each timer held a stop watch (or horse timer) in his hand, and the instant the engineer applied the brakes the watches were started, and when the train was brought to a state of rest at the platforms so as to receive the passengers, the watches were stopped and the time required noted. Galloway made fifteen stops, and the average time required for each was twenty four and one half seconds, or six minutes and 7-60 for stopping fifteen times. The second trip was with engine No. 320, Reuben Zepp, engineer, and his average time was twenty-four and 59-60 seconds. The third trip was with engine No. 322, William Kelley, engineer, and his average time was twenty-four and 8-13 seconds. The engines were each of the same pattern, weighing about thirty-six tons, and were not reversed. The speed of the trains was from thirty to forty-five miles per hour. The following is the summary: Galloway, 24½ seconds: Zepp, 24 59 60; Kelly, 24 8-13. Thus the difference in the average time required to stop was not quite one sec-

ond. This is reducing the stopping of railway trains to a science. Further experiments will be made to determine the exact distance required to stop, &c.—*Balt. Sun.*

Concord Railroad.

The receipts from operations of this road for the fiscal years ending March 31, 1872 and 1873, have been as follows:

Paid two div. of 5 per each	150,000 00	
		154,368 87
Balance carried to contingent fund		$758 29

From the foregoing statement it appears that the sum of $125,339 39 has been expended for new locomotives, freight cars, and railroad iron, besides other large and extraordinary expenses. This is a much larger amount than was expended last year for such purposes, especially for iron; but it is certain that the necessities of the road required the outlay.

The condition of the funds and accounts in the treasurer's office appears from his trial balance, which accompanies this report.

The new item of $116 793 36, which appears therein on the debit side, is the sum which has been paid out on account of the Suncook Valley Railroad for construction, as will be more fully explained hereafter. The other assets of the road, which do not appear in the treasurer's trial balance, are shown in the accounts on the books in the office of the superintendent, and the facts in relation thereto are substantially the same as in the previous year, except that the construction account of the Suncook Valley Railroad has been paid and closed in his office, by crediting thereto the unexpended balance of the appropriations reserved out of the earnings of the year ending March 31, 1872, and the appropriation out of the earnings of the year ending March 31, 1873; and that account has been transferred to the office of the treasurer, and appears in his trial balance, as before stated.

The stock account has been increased, as it appears from the annexed statement, the past year, and more than in the previous year, and exceeds the amount then on hand in the sum of $9,645 76. This excess is in the repair shop, and materials for the repair of the road, now on hand.

The rolling stock it still insufficient to meet the reasonable demands of the public, notwithstanding the large additions that have been made thereto during the past three years. Two new first-class passenger cars have been purchased, paid for, and put on the road during the year, and another is being built in the shop of the road, and will soon be ready for use. The passenger equipments of the road are in a good condition, and are fully sufficient, in quantity and quality, for its ordinary use, and the travelling public are apparently well satisfied with the passenger accommodations furnished it by the road.

Thus far, the increase of the number of freight cars has not been equal to the constantly increasing requirements of the business of the road. Since the last report, there have been built sixty new platform cars, which our now in use, and twenty-five coal cars have been purchased and paid for, and the number of freight cars has been thereby increased eighty-five, during the year. There is still need of one hundred more freight cars, and preparations are being made to build so many thereof as can be reasonably done during the coming season. It is important that the freight equipments of the road should be fully sufficient to promptly meet the wants of its patrons, and efforts will not cease in that direction till that object is accomplished.

One new first class passenger locomotive has been built and completed during the past year, and a new freight locomotive is nearly done, and will be ready for use on or before July next; and the motive power of the road is in a better and more efficient condition than heretofore, and, for the present, is sufficient for its ordinary necessities.

The road bed and track have been kept in thorough repair during the past year, and in many particulars much improved. There have been laid upon the Concord Road and branches 583 tons of new iron rails, and 1,363 tons of rails have been taken up, welded, and relaid; and 502 tons of new steel rails have been purchased and laid on the main track, in continuation of those laid during the previous year southerly for more than five and one half miles, so that the whole distance from Concord of steel rails is more than thirteen miles. Every year's additional experience in their use makes it more evident that it is good economy to replace iron with steel rails upon the main line, as fast as the same can be reasonably done. There have been placed in the track 61,720 new sleepers, and, so far as the steel rails have been laid, both tracks of the road have been ballasted with gravel to the depth of one foot, which is a permanent improvement of the tracks; and it will require less expense hereafter to keep them in such repair as will insure safety and security, so far as may be, to passengers and employes on the trains. The road bed and tracks are in a good condition, but it is intended to continue to improve them, as heretofore.

The fences on the Concord Road and branches are in a good condition of repair and efficiency. During the past year there have been built 5,045 rods of new fence, or more than fifteen and three fourths miles; and it will only be necessary hereafter to build new fence sufficient to replace and make good the ordinary annual decay of it.

The depots and other buildings have been improved during the past year, but not as much as was desirable, and would have been done, had circumstances favored it. A new passenger depot has been built at Candia, which was much needed, and greatly improves the passenger facilities at that place. The passenger depot at Newmarket Junction has been repaired, new platforms built, and its conveniences thereby greatly enhanced. A new iron turn-table has been put in at Nashua, and the facilities for handling locomotives at that terminus of the road have thereby been much improved. As stated in the last report, a new passenger depot is needed at Nashua; and it would have been built during the past year, if it had not been for the difficulty in determining the location which would not only best accommodate the passengers desiring to take the cars there, but those intending to go from this road on to the other roads terminating in that place, and connecting therewith. It is still thought expedient to delay building a passenger depot there, and make the old one, however in convenient, answer till the railroads which are now being constructed, and which lead from Nashua, are fully finished and completed, and then it is expected that a Union depot will be erected by the several roads, on such a location and of such dimensions as will best accomodate the inhabitants of that growing and thriving city, and all the railroads centering there.

A new engine house at Concord has not been built during the past season, notwithstanding the necessity therefor still exists; but arrangements have been made for building one, and it is now expected that it will be erected this season. The passenger depot at Concord is not sufficient to meet the wants of the road, and will be replaced with a larger, more commodious and convenient one as soon as it can be done, with a reasonable regard to its financial condition.

The directors, by such further experience as they have had in the use of coal, and such further information as they have obtained in relation thereto, have no occasion to change the views which they expressed in their last report—that coal is more economical fuel than wood; and therefore, they will continue to increase the amount of coal now used, as fast as the same can be conveniently and practically done.

The Miller Platform and Coupling have been used on the road during the past year, with complete success; and experience has conclusively proved their superiority, in many respects, over the ordinary platform and coupling heretofore in use. This platform and coupling have been put on to eighteen passenger cars, in addition to those put on to the cars during the previous year, so that nearly all the passenger and baggage cars on the road are furnished with them; and thereby the safety of passengers is much increased, and the liability of the road to the payment of damages for the injury of passengers on the cars much lessened.

The Suncook Valley Road has been in operation under the lease since January, 1870, and there has been an annual increase in its gross earnings sufficient to render it reasonably certain that the income derived therefrom will, in the future, be equal to the expenditures incurred in operating the road, and the rent to be paid therefor.

As stated in the last report, by the terms of the contract between that road and the Concord Road, the latter was to complete the road and adjust and settle such land damages as then remained unpaid. The amount expended thus far therefor is $116,793 36, and the account thereof up to this time has been kept in the office of the superintendent, under the head of construction, and payments have been made thereform of such sums as have been expended in the completion of that road; but that account has been paid, and closed in his office, and transferred to the office of the treasurer, as before stated, and the above sum, expended as stated, appears in his trial balance as an indebtedness against that road, and the payment thereof is secured by a pledge of stock which is now held by the road.

The Manchester and Lawrence Railroad was operated under a contract between that road and this, prior to the decision of the Supreme Court of this State, rendered in the suit of David Currier *et als v.* Concord R. R. *et als*, in which that contract was held to be invalid and illegal. Since then that road has been managed by its own directors, and the relations between the two roads have been harmonious, and the business between them has

been done in accordance with the provisions of a parol agreement therefor.

The total tonnage of the road for the year has been 692,768, equal to 20,222,956 tons transported one mile. Total number of passengers carried 613,842; total carried one mile, 13,333,060. Number of miles run by trains, 802,162.

Coal Lands of the United States.

The following is a copy of an act passed by Congress to provide for the sale of lands of the United States containing coal:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any person above the age of twenty-one years, who is a citizen of the United States, or who has declared his intention to become such, or any association of persons severally qualified as above, shall upon application to the register of the proper land-office, have the right to enter, by legal subdivisions, any quantity of vacant coal lands of the United States not otherwise appropriated or reserved by competent authority, not exceeding one hundred and sixty acres to such individual person, or three hundred and twenty acres to such association, upon payment to the receiver of not less than ten dollars per acre for such lands, where the same shall be situated more than fifteen miles from any completed railroad, and not less than twenty dollars per acre for such lands as shall be within fifteen miles of such road.

Section 2. That any person or association of persons severally qualified as above, who have opened and improved, or shall hereafter open and improve, any coal mine or mines upon the public lands, and shall be in actual possession of the same, shall be entitled to a preference right of entry, under the foregoing provisions, of the mines so opened and improved: *Provided*, That when any association of not less than four persons, severally qualified, as in section one of this act, shall have expended not less than five thousand dollars in working and improving any such mine or mines, such association may enter not exceeding six hundred and forty acres, including such mining improvements.

Sections 3. That all claims under section two of this act must be presented to the register of the proper land-district within sixty days after the date of actual possession and the commencement of improvments on the land, by the filing of a declaratory statement therefor: *Provided*, That when the township plat is not on file at the date of such improvement, filing must be made within sixty days from the receipt of such plat at the district office: *And provided further*. That where the improvement shall have been made prior to the expiration of three months from the passage of this act, sixty days from the expiration of said three months shall be allowed for the filing of a declaratory statement, and no sale under the provisions of this act shall be allowed until the expiration of six months from the date thereof.

Section 4. That this act shall be held to authorize only one entry by the same person or association of persons under its provisions; and no association of persons any member of which shall have taken the benefit of this act either as an individual or as a member of any other association, shall enter or hold any other lands under the provisions of this act; and no member of any association which shall have taken the benefit of this act shall enter or hold any other lands under its provisions; and all persons claiming under section two hereof shall be required to prove their respective rights and pay for the lands filed upon within one year from the time prescribed for filing their respective claims; and upon failure to file the proper notice, or to pay for the land within the required period, the same shall be subject to entry by any other qualified applicant.

Section 5. That in case of conflicting claims upon lands where the improvements shall be hereafter commenced, priority of possession and improvement, followed by proper filing and continued good faith, shall determine the preference right to purchase. And also where the improvements have already been made at the date of the passage of this act, division of the land claimed may be made by legal subdivisions, to included, as near as may be, the valuable improvements of the respective parties; and the Commissioner of the General Land Office shall be, and is hereby, authorized to issue all needful rules and regulations for carrying into effect the provisions of this act.

Section 6. That nothing in this act shall be construed to destroy or impair any rights which may have attached prior to its passage, or to authorize the sale of lands valuable for mines of gold, silver, or copper.

Approved, March 3, 1873.

State Aid to Railroads of Missouri.

AUDITOR'S OFFICE,
JEFFERSON CITY, Sept. 1st, 1873.

His Excellency Silas Woodson, Governor of Missouri:

DEAR SIR: In reply to your favor of 26th ult., allow me to submit the following statements, which are as full and complete as can be obtained from the records of this office:

1. The following is a list of railroads in the State aided by the State, and the amounts loaned each in the bonds of the State:

Pacific	$7,000,000
St. Louis and Iron Mountain	3,501,000
Platte County	700,000
Hannibal and St. Joseph	3,000,000
North Missouri	4,350,000
Cairo and Fulton	650,000
Pacific, guaranteed	3,800,000
Southwest Branch	2,589,000
Total	$25,590,000

From this amount should be deducted $2,589,000, direct six per cent bonds issued in lieu of $2,589,000 Pacific seven per cent bonds guaranteed, returned and cancelled. This leaves the sum of $23,000 000 as the amount loaned to railroads.

2. It will be impossible for me to give you the exact amount of interest paid on these bonds by the State, as no accurate account appears to have been kept in this office prior to 1860; but from entries made upon the books of the office at different times from January, 1860, to July, 1873, inclusive, I find that the sum of $19,500,000 interest alone has been paid upon these bonds issued to railroads. In this amount I include $4,000,000 consolidation bonds issued under act of March 12, 1867, to pay interest on railroad bonds due from January, 1864, to July, 1867, inclusive.

I do not include the interest on Hannibal and St. Joseph Railroad bonds, as this company has promptly paid all interest on its bonds.

The amount of railroad bonds still outstanding is as follows:

Hannibal and St. Joseph	$3,000,000
Pacific	4,615,000
St. Louis and Iron Mountain	2,879,000
S. W. Branch Pacific	1,456,000
North Missouri	2,964,000
Platte County	504,000
Cairo and Fulton	892,000
S. W. Branch Pacific, guaranteed	1,589,000
Total	$16,899,000
Of the 6 per cent consolidation bonds issued to pay overdue interest on railroad bonds, there are still outstanding	2,727,000
Total amount of bonds outstanding issued on accounts of railroads	$19,626,000

3. The amounts realized by the State in cash from the sale of railroads for which it indorsed are, so far as appears of record, from—

S. W. Branch Pacific	$325,000
Pacific	5,000,000
St. Louis and Iron Mountain and Cairo and Fulton	305,916
North Missouri	200,000
Platte County	407,180
Total	$6,238,096

4. These amounts were paid in cash, bonds and coupons; were placed in the State interest fund and used for the purpose of paying the outstanding interest on railroad bonds.

5. The St. Louis and Iron Mountain railroad was allowed a credit of $675,000 on the amount of purchase money for extension of road, and the Platte County Railroad was allowed a credit of $913,321 for the same purpose.

6. The amount of the State debt at this date, less the amount of bonds issued to the Hannibal and St. Joseph Railroad, is $18,366,000, and of this amount $16,626,000 is the result of aid given to the other railroads in the State.

Hoping that the above may prove satisfactory, I am, very respectfully, yours,

GEO. B. CLARK,
State Auditor.

By W. MCGRAIN, Chief Clerk.

☞ The article on railroads reported to the Michigan Constitutional Convention provides that the Legislature shall establish reasonable maximum rates for transportation of passengers and freight, and shall prohibit contracts between such railways and companies in favor of either as against other companies owning connecting or intersecting lines; also, that no railway corporation shall issue any stock, bonds or other evidence of indebtedness except for money, or labor, or property actually received and applied to the purpose for which the corporation was created.

☞ The New Jersey Midland Railroad Company have resumed control of that section of the road lying between Unionville and Bloomingdale, lately operated under lease by the New York and Oswego Midland Railroad Company. The latter company having failed to make the payments called for by the lease. The section of the road reclaimed by the New Jersey Midland was the connecting link between the two sections of the New York and Oswego Midland Railroad Company.

☞ Messrs. A. & P. Roberts & Co., of the Pencoyd Iron Works, Philadelphia, Pa., have just finished a new mill, doubling the former capacity of the works, and it will start at once.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An asterick (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An asterisk (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

American Railroad Journal.

Saturday, October 4, 1873.

Stock Exchange and Money Market.

Money has been working more comfortably for the borrowing interests, as compared with the absolute stringency of the preceding week, which shut out all chances of obtaining accommodation. The later negotiations in the call loan line have been on the basis of the legal rate of 7 per cent to the best of the street houses. In the way of discounts, there has been more of a demand for choice to very good mercantile paper within, however, the extreme range of 15@20 per cent per annum. The closing days of the week were characterized by a quite general revival of confidence, and the financial, as well as the commercial prospect was much improved.

The U. S. Sub-Treasury, last week, reduced its currency balance $20,151,700, and its coin reserve $1,655,315. Its, currency balance at the close of the week was $4,407,336; and its coin reserve $51,378,851. Under orders from Washington, the November coin interest on the public debt is now being paid, with the customary rebate. The receipts of the Sub-Treasury, from all sources, in September, were $53,698,937; payments, on all accounts, $82,085,189.

Gold has been more active, with wide and frequent fluctuations reported. The speculative dealings have been on a more extensive scale. The customs call fair, and the export drain unimportant. Specie in considerable amounts is now on the way from England to this port. The range of the price during the week as far as reported has been from 110⅜@115½, and the quotation on Wednesday was 110⅞ against 111⅜ on Wednesday of the preceding week. The specie outflow last week, was only $461,125.

The cash balances of the Treasury Department on Tuesday were: Currency, $2,446,487; special deposits of legal tenders for the redemption of certificates of deposit, $11,250,000; coin, $85,319,568. Coin certificates, outstanding, $34,240,000; outstanding legal tenders, $356,000,000.

The customs demand for Gold last week, averaged $318,000 a day. The total customs revenue of the Government, in coin, at this port, since Jan. 1, 1873, has been $98,326,049, against $117,176,443 during the same time in 1872. Government has disbursed through the U. S. Sub-Treasury here, on account of the coin interest on the public debt, since January 1, 1873, $55,026,529, against $59,070,841 during the same time in 1872. The export drain of specie since January 1, 1873, has been $42,268,252 against $58,382,126 during the same portion of 1872.

Foreign Exchange improved in price toward the close, on a partial revival of the demand, with a view to facilitating the produce exports. Bankers' sixty day bills on London closed on Wednesday nominally at 106½@107; sight bills on London, at 107½@108. The week's exports of Domestic Produce have been to the currency value of nearly 6½ millions.

Government securities, have been more sought after, especially since the opening of the Stock Exchange on Wednesday, which aided in the execution of orders. Prices, however, have been much lower than those ruling a few weeks ago.

U. S. sixes of 1881 closed on Wednesday of this week at 113½@114½; U. S. Five-Twenties of 1862, 107@108; U. S. Five-Twenties of 1864 at 108@109; U. S. Five-Twenties of 1865 109@109½; U. S. Five-Twenties of 1865 consolidated 112@112½; U. S. Five-Twenties of 1867, 113½@113¾; U. S. Five-Twenties of 1868, 113@113½; U. S. Ten-forties at 107@107½; U. S Fives of 1881 (Funding Loan) 106@107½; Six per cent. currency Sixes from 108@108¼.

The dealings in Railway and Miscellaneous securities were comparatively limited, and at materially depressed and somewhat nominal prices, previous to the opening of the Stock Exchange on Tuesday, which event was followed by a more active and regular movement; and the prospect at the close was, on the whole, an encouraging one.

More demand has been noted for State and Railway bonds, but at low prices—showing the serious effect of the panic on even substantial properties. Central Pacific first mortgage six per cents closed at from 89½@90.

The Central Pacific Railroad Company announce that the October coupons of its $6,080,000 first mortgage bonds (San Joaquin Valley branch) will be paid in New York at the office of Philip Speyer & Co.

☞ General business has been reviving toward the close quite encouragingly. Breadstuffs have been in much better demand and held higher, as a rule. Cotton, fairly active, but lower. Provisions, in moderate demand; Bacon closed dearer; other kinds weaker. Wool and Tobacco tamer, and less buoyant as to values. Groceries much less firm, on a moderate business. Metals very dull throughout; prices without marked alterations. Live Stock, about steady, with restricted dealings noted. Ocean freights, firmer and more active.

☞ The import entries of foreign merchandise at New York, including dry goods, amount for the past week to $10,902,468 as compared with $8,387,201 same week last year.

☞ The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

Chesapeake and Ohio Railroad—Completion of the Church Hill Tunnel.

The Richmond *Dispatch*, of October 1, thus refers to the opening of the great tunnel under the streets of Richmond, an Extension of the main line, whereby the freight and mineral cars can be hauled alongside the steam and sailing ships at the new wharves, immediately below the city:

Track-laying in the tunnel has been completed as far as shaft No. 3 and Twenty-ninth and Broad streets, this being the eastern terminus of the tunnel proper, and the point at which the portal for that end was to have been erected. Since the commencement of the work, however, it has been deemed advisable to arch over the approach for several hundred feet to a point in the rear of the colored church. This has been nearly finished, and the track will be laid under it to-day.

☞ The estimated earnings of the Denver and Rio Grande Railway for the week ending September 14, are: freight, $3,044 99; passengers, $3,710 80—total, $6,755 79—an increase over the same week of 1872 of $131 77.

Railroad Taxation in Illinois.

A committee appointed by the Illinois State Board of Equalization to make a valuation of the several roads for the purposes of taxation has divided on one point, and two reports are submitted to the full board. They differ in this: that the majority reckon the full cost of roads, buildings and equipments, while the minority think the cost of grading should be deducted. There is something to be said on both sides, but it seems to us that the minority have taken the correct view. The standard for taxation should be not what a road has cost, but what it is worth. The cost of grading is very variable, but when it is large it does not make the road more valuable, but quite the reverse. The cost of grading apparently varied according to these reports between $901.33 and $10,507.24 to the mile, and the aggregate difference of valuation by the two systems amounts to more than thirty-eight millions of dollars. The list is made up however on the basis of seventy per cent of the true value, so that the real cost of grading varied between $1,287.01 and $15,010.34 to the mile.

Some other interesting figures may be drawn from these reports. We get, for the first time we believe a true statement of the railroad mileage of Illinois. The Central road is taxed under the constitution on a basis of its own, but all the other roads are included in the table, and they aggregate 5,701 miles, 3,059 feet. Add to this the 708 miles of the Illinois Central and we have a total of 6,410 miles in the State. The total value of railroad property, including grading, is given as $98,400,545.53, but as it is on the basis of seventy per cent the true value would be $140,572,207.90. The cost of construction and equipment of the Illinois Central is reported to be $33,902,987.55. The entire cost of the railroads of the State would therefore be $174,485,195.45, or an average of $27,189.89 a mile. The true cost of grading a mile is found by a similar process to be $9,585.55.

Taxation of Railroad Land Grants.

Complainants asked for an injunction to restrain the levying of a tax upon certain lands held under acts of Congress and of Michigan, donating them for the construction of railroads. The United States Circuit Court, sitting at Detroit, on the 23d ult., rendered a decision, which the *Free Press* reports as follows:

If lands are held by a railroad company not for the purposes of road bed, station-houses, or other objects connected with their public duties, but for the purposes of sale, as a natural person would hold them, they do not come within the provision of the Constitution or the statute authorizing the specific taxation of the general property of the corporation, and may be taxed like the property of citizens. It would, however, be unjust to the State not to mention the clear assertion of a power to tax these lands, contained in the seventh section of the same act, which contains the contract relied upon. It is there provided that they shall not be liable to taxation for seven years, unless sold or improved. The implication is irresistible that after that period they may be taxed though still held by the company, and at any time when sold or improved. These very lands, which it is argued the Legislature intended wholly to exempt from everything but specific taxation while in the hands of the company, are asserted to be the subject of general tax if at any time the company improves them even without sale. That the Legislature quite understood the settled construction which had been given to the clause in reference

to specific taxation in section twenty is clearly shown by the provisions of section seven.

Union Railroad.

On the 29th ult. a number of New Jersey gentlemen met at the Fifth Ward Savings Bank in Jersey City and organized a new company to be called the "Union Railroad Company," and they propose to take the route laid out by the National Railway Co. J. B. Culver, R. M. Broas, J. D. Banghart, John P. Culver, G. P. Kimball, John Onderdonk, William A. Kimball, Samuel McBurney, Peter Bentley, Jr., Cornelius Vreeland, and John Cummings constitute the board of directors. Peter Bentley, Jr., was elected president; Gardner S. Kimball, treasurer; John P. Culver, secretary; J. B. Culver, chief engineer, and Johnson D. Banghart, attorney and general manager. The capital stock was fixed at $500,000, of which $10,000 was paid in cash. The present enterprise is understood to be in the interest of the Pennsylvania Railroad Company, which the National, or Air line, proposed to rival. At least two of the board of directors of this new company were largely interested in the National. It will be remembered that immediately after the passage by the last Legislature of the general railroad law, the National Railway stockholders filed their articles of association, and then proceeded to make the necessary surveys for the road. Since that time nothing has been done, although by the general railroad law any company proposing to build a road through the State is required to commence the work within six months from the date of their organization, else the franchises given by the act are forfeited. The six months expired on the 1st of October.

☞ Those correspondents who have been writing us about the patentability of a new signal system, also a new fish plate, and one or two other matters, for which patents are sought, can not in our opinion do better than to seek the advice of Messrs. KELLER & BLAKE, patent solicitors and experts. If patents are to be had, they will obtain them; and in the case referred to, where an immense sum in royalties is claimed, this firm will doubtless find a way of bringing the infringers to a settlement directly.

☞ The earnings of the Northern Central Railway for the eight months ending August 31, 1873, were $3,286,661 23, the expenses $2,470,794 12, and the net earnings $815,867 11. For the corresponding period of the previous year the earnings were $2,847,274 95, the expenses $2,257,221 31, and the net earnings $590,053 64—showing an increase in earnings of $439,386 28, in expenses of $213,572 81, and in net earnings of $225,813 47.

☞ The Philadelphia *Ledger* reports the total anthracite coal tonnage for the week ending September 20, at 500,365 tons, and for the coal year 14,258,020 tons, against 13,749,721 tons to corresponding time last year, being an increase of 608,299 tons. The bituminous tonnage for the week is 79,396 tons, and for the year 2,226,940 tons, giving a total of all kinds for the week of 579,761 tons, and for the year of 16,654,960 tons, against 15,762,648 to same time last year, being an increase of 892,312 tons.

Toronto and Nipissing Railway.

The annual meeting of this company was held in Toronto, Ca., on the 9th ult. The annual report states that the revenue from all sources was $183,896 and the total expenditure $114,558 leaving a balance of $69,338 available for interest of bonds, &c. The interest on the company's bonds during the year amounted to $48,090 and on floating debt to $17,276 98, in all, $65.366 98, leaving a balance of $3,971 50, which, added to the balance of last year's account, $7,730 28, still leaves $11,701 78 at the credit of net revenue. The expenditure on capital account to 30th June, 1873, was $1,566,112 41, a further expenditure of $33,887 59 for ballasting, workshops, &c., is still necessary, thus raising the capital account to $1,600,000, made up as follows: Municipal bonnses, $375,072 59; government bonus, $104,860; shares, $197,100; bonds, $673,000; total, $1,350,032 59 leaving a balance of $249,967 41 for which it is necessary to provide before any dividend can be paid to the stockholders. To meet this liability the directors recommend that new shares be subscribed for by the present shareholders, *pro rata* according to the number of shares held by them, which will enable the directors to issue additional bonds. The total amount of bonds and stock necessary to cover the actual and estimated expenditure on capital account would stand at $1,120,100, the annual interest on which, at 8 per cent, is $89,608. The sum of $4 000 was voted to the Managing Director for his services during the year, and the following board was elected for the current year. Messrs. Wm. Gooderham, jun., A. T. Fulton, J. E. Ellis, Wm. Copland, H. McDonald, H. P. Dwight, Joseph Gould, George Gooderham, and W. S. Lee. The directors subsequently elected Wm. Gooderham, jr., President and A. T. Fulton, Vice-President.

Inventions Required.

Inquiries have recently been made at this office for the following improvements and compounds—that is, where the best thing respectively, of each kind named could be found. Thus far we have been unable to give the information desired:

The best Traction Engine.

An apparatus for effectually regulating the supply of water in buildings, to tanks, &c.

A machine for hulling rice, and similar cereals.

The best known process and apparatus for preserving meats of all kinds.

A method of obtaining axle grease—the article of that kind that will stand wear.

A tip-top article of steam packing is also wanted in large supply.

The most powerful and durable stone-crusher.

A reliable air-compressor.

A rock-drill that can be proven to be first-class.

Also a steam shovel, for use chiefly on railroads.

Parties any way interested in the manufacture or sale of either of the above named articles will find it greatly to their interest to make known, through our columns where they can be found, as well as the merits and chief features of their several articles.

☞ The estimated earnings of the Kansas Pacific Railway for the week ending Sept. 15, are: freight, $42,951 84; passengers, $34,468 21—total, $77,420 05.

[From the Nederlandsche Financier.]

The General Committee of the Exchange for the Public Funds in Amsterdam.

It having been ascertained that there have been put in circulation on the Exchange here, Bonds for the construction of the *Tebo-Neosho Zijtak* issued under a mortgage by the Missouri Kansas Texas R. R. Co. dated 1st Feb'y, 1871, being a new series of Bonds amounting to $2,500,000, numbered 14,001 to 16,500, and secured with the bonds numbered up to 14,000 by the above mentioned mortgage and also by a mortgage dated 1st June 1872;

And whereas in a prospectus dated 15th May 1871, it was declared that the capital of the company shall in addition to its stock consist of $14,000,000 bonds, to which for greater security is attached under certain conditions a land grant in Kansas and in the Indian Territory;

That to the first named obligations (Tebo-Neosho Zijtak) no land grant is attached;

That the holders of the original capital have the right to decide that the bonds constituting the increased capital shall not go upon the market under the same name or on the same footing with the others—

Resolved that although the issue is authorized by Article 10 of the mortgage dated 1st Feb'y 1871, the obligations of the Missouri Kansas Texas R. R. Co. numbered above 14,000 are not deliverable with those under 14,000.

The above named Exchange Committee,

L. H. WEETJEN,

Chairman.

☞ The drift way, or trial tunnel, of the St. Gothard Railway was advanced 51 metres between the 1st and 31st July on the north or Goeschenen side of the mountain, and 47-40 on the south or that of Airolo. The length of the great tunnel excavated up to the 31st July amounted to 259-20 metres on the north, and 266-60 on the south side, and, as the total length of the tunnel will be 14,920 metres, there will remain to be completed 14,394-20 metres (nearly nine miles).

☞ The trunk recently sent from Halifax to San Francisco by the general baggage agent of the European and North American Railway, in order to test the facilities of transportation, reached Halifax on its return trip on Saturday last, having been nine and one-half days from San Francisco. In going out it was detained eighteen days at Omaha. Eleven different railroads furnished the transportation.

☞ The Washington *Chronicle* says that "a distinguished business man in Holland has made a proposition, now in possession of Senator Morton, to build a four-track railway from New York to some point in Indiana or Ohio, with two tracks thence to St. Louis or Chicago, the road to be built of steel rails in the most complete manner. No grants, subsidies or subscriptions are asked; the proposition exacts only that the road shall be chartered by Congress."

☞ The earnings of the Erie Railway Company for the week ending Sept. 23, 1873, were $530,366, and since July 1, $4,945,401—an increase over the corresponding period of the previous year fo $425,424.

☞ Ground will be broken for the railroad from Tucson, Arizona, to Guaymas, about the 9th of November.

New Cattle Cars.

Those at all familiar with the condition of cattle on their arrival at the great stock yards of the country know that the present method of shipment is not only barbarous as respects the treatment of the cattle, but inimical to public health, and consequently entailing a great loss. In other words, the cattle suffer terribly for want of rest, food and water; are delivered at their destination in a sick, famishing, and bruised condition, with a great loss of weight; and are soon after slaughtered and served up as food. When we state that thousands of cattle are confined from forty five to fifty hours in crowded cars, without a particle of food or water; that they are often so exhausted as to be unable to stand; but their flesh becomes bruised and their blood feverish; that they often die before reaching their destination, and that a large percentage of them are sold and butchered in an unhealthy condition, we state what will not be denied by any one familiar with the shipment of live stock. The evil is known and admitted on all hands.

In view of these facts inventors have been at work devising better means of shipment; and judging from what was witnessed in this city yesterday, the great consideratum has been obtained in the shape of a new stock car, invented by Mr. J. T. McCarty, of Salem, Ohio. The car is thirty-six feet long, and has accommodation for sixteen head of cattle or horses. Each animal has a separate stall, and the gates are on slides and move with the cattle. They stand eight in a row on each side of the car, and all facing outward. The hips of the animals come together, and they are exempt from all hurts or bruises. The car is so arranged that the stock can be fed and watered on the way. This car has been in use since May last, but is now being run from Chicago to New York (over the Pennsylvania Central), at the request of Mr. Cassatt, General Superintendent of the road, for the purpose of making a thorough test of its advantages. Mr. McCarty loaded two of his cars at Chicago, the thirty two cattle weighing 42,180 pounds, or considerably over the average weight. The cars arrived here at 2 o'clock yesterday, and attracted great attention in the stock yards while they remained there. The cattle were in excellent condition, having been regularly fed and watered, and a number of them were lying comfortably in their stalls, taking their ease. The cattle are owned by Mr. Peter Klemans of East Liberty. Contrast this method of shipment with that now prevailing on our railways—it being the custom to run the cattle through from Chicago to Pittsburg without food or drink, and then from Pittsburg to New York without feeding or watering. Leaving out of view the terrible sufferings of the animals and the unwholesome character of their flesh, the owners of cattle will make money by having this car brought into general use, in the single item of "shrinkage" alone. The average weight of an ox is 1,200 pounds, and average shrinkage is put at ten per cent., or one hundred and twenty pounds per head. In 1872, over one million head of cattle were received at New York, Philadelphia, Baltimore, Albany, Washington, Boston and Providence—so that there was a sum total of 120,000,000 pounds of beef starved, goaded and jolted out of the cattle brought to the above named seven cities in a single year. Putting even the lowest money value on this wasted beef, the wholesale price—and it runs over $8,000,000 of an animal loss. Some authorities estimate the shrinkage at considerable more than ten per cent, and those most interested in keeping it at a low average admit it to be eight per cent. Now Mr. Carty will guarantee, by the use of his improved car to save fifty pounds shrinkage per head between Chicago and Philadelphia, or 800 pounds per car. Cattle owners can figure the value of this saving for themselves. At seven cents a pound it would amount to $56 a car.

Mr. McCarty has tested his car sufficiently to give him the fullest confidence in it, and we are glad to know that so influencial a corporation as the Pennsylvania Central has determined to demonstrate its merits, with a view to its adoption if successful. A better day seems to be dawning for the dumb animals on their way to the slaughter pens, and a better day for those who make beef an article of daily diet.—*Pittsburg Commercial.*

The Decision in the La Crosse Bridge Case.

The Milwaukee and St. Paul Railway Company, desiring to cross the Mississippi river at or near La Crosse, procured the passage of an act by Congress, permitting it to bridge the river between the counties of La Crosse, in Wisconsin, and Houston, in Minnesota, but this and previous acts subjected the location of bridges to the approval of the Secretary of War. The Milwaukee and St. Paul Company selected a point about two miles above the main portion of the city of La Crosse. This location the Secretary of War refused to sanction, on the ground that it would impede navigation, and he designated another point in the city of La Crosse more acceptable to the citizens, and at a point where other parties had been authorized to bridge the river. The company appealed to the Legislature of this State and Minnesota for authority to bridge the river at the point they desired. Both bodies passed bills to that effect, but the one passed by the Wisconsin Legislature was vetoed by Gov. Washburn on the ground that the river is a great national highway, and, as subject to the control of the general government; that to grant the States the power to authorize the building of bridges *ad libitum* would be to give them the power practically to prevent free navigation.

Meanwhile the company had begun the building of a bridge at the point chosen by it. An appeal was had to the United States Court for an injunction to restrain the company from proceeding with its work. That appeal has just been granted by the United States Circut Court at La Crosse, Judges Drummond and Hopkins, and an injunction ordered to issue. The decisions of the judges coincide, and the question is discussed at considerable length by each. Judge Drummond's position is in brief as follows: The Mississippi is a great national highway, free to all citizens of the United States; that if it is to be bridged, it is, therefore, competent for Congress to determine under what regulations it shall be done, to the end that navigation may not be unnecessarily impeded. It can say where and in what manner bridges may be built, and can delegate power to any one to see that its regulations are observed. This it has done, the Secretary of War having been intrusted with that power. It follows then that Congress having this power and having exercised it by the passage of laws, and appointed a representative to see that the laws are observed, the courts must sustain the decisions of this officer so long as they are in accordance with the laws and do not transcend the scope of his duties. This also is the position of Judge Hopkins, expressed in a somewhat different course of reasoning.

Both judges proceed further to argue that the Secretary of War, in refusing to sanction the location of the Milwaukee and St. Paul Company, did not transcend his powers, even granting what was claimed for the company, that he had no right to say where the bridge should be built. The judges do not pass upon the question whether the Secretary of War has the right, having refused to sanction the Company's location, to select one, because so far as the question before them is concerned this is not material.

Judge Drummond indirectly justifies the Secretary of War in refusing to sanction the company's location, notwithstanding, looking at the river, it may be difficult to determine how a bridge where the company desire it would obstruct navigation more than at any other point. He says that, in sanctioning or refusing sanction to a location, the Secretary must have regard to convenience of access, and to the prevention of the frequent occurrence of bridges. These considerations, as we understand the matter, influenced the Secretary in refusing to sanction the location above the city of La Crosse: it would not accommodate other companies as well as the point at the city, where there is to be a bridge built by special charter, we believe; while it would bring two bridges within two miles of each other, and that near a considerable city, where boats are more numerous than at other and less important points.

We believe we have thus correctly stated the situation of the bridge question and the points of the decision. The question, outside of local consideration, is one of much importance, and on this account as well as because an important and growing city of the State is deeply interested, we have thought it worthy of more than a passing notice as a matter of news. Whether an appeal will be taken to the Supreme Court or not is yet a matter of doubt.—*Milwaukee Wisconsin.*

The Illinois Railroads.

With regard to the operation of the new official freight and passenger schedule, the Chicago *Times* of the 23d ult., says:

In the case of the Northwestern and the Chicago, Burlington and Quincy roads, the result has been so far satisfactory that the freight earnings of the two roads have been higher than they were in the corresponding months of last year; with the Illinois Central, the two months of the new law has produced about the same result as seen on the two roads last mentioned. The Chicago and Rock Island road suffered a considerable loss in traffic during the first month, but under the new arrangements which have been made the revenue from freight has been fully equal to the earnings of previous years. For some time it appeared doubtful what would be the experience of the Chicago and Alton Railroad. Running north and south and depending for a good deal of its traffic at points at which there was competition with east and west roads, Mr. Smith, the general freight agent of the road, was less able to anticipate the result of the operation of his tariff issued on the first of July.

During the past week, several of the railroad authorities have discussed the question of new rates in connection with the tariff recently promulgated by the State board of railroad commissioners. The announcement contained in telegrams from Springfield that the State board considered these new tariffs as being in their opinion for the guidance of courts in cases of alleged extortionate rates, has led the authorities of one or two of the roads to decide to issue amended tariffs.

Railways in Japan.

Of late we have heard a great deal of Japanese progress in many ways, and of their imitation of European institutions generally, but in no respect is this more noticeable than in regard to the recent introdnction of the railway system into that country. The construction of railways in Japan is being carried forward with considerable activity, and we may usefully give our readers some information with regard to the subject. The first railway in Japan was opened last year, and the support which it has received and the completeness of its management and receipts cannot fail to give satisfaction to the Japanese Government. This line runs from Yokohama to Shinagawa, and the State opening on the completion of the line to the Yedo terminus took place on the 12th October last. Appropriately to this subject it may be pointed out—although no information is given as to the cost of the line—that railway construction ought to be cheap enough in Japan, as money is easily procurable, material is plentiful and at hand, and labor is cheap. Preliminary outlay, such as parliamentary expenses, cannot amount to much, while the sums given as compensation must be inconsiderable. So far it is satisfactory to record that the Japanese line above referred to has been worked without accident, which is attributed to the foreign supervision and foreign workmen employed. There is, however, a growing desire on the part of the Japanese to get into their own exclusive management such works as these, but it is stated that the time has by no means arrived when they can dispense with foreign aid. The

total length of the line opened last year is only 18 miles and amongst those who constitute the foreign *personnel* are one resident engineer, ten engine-drivers, six fitters and smiths, one traffic manager, five travelling inspectors, two medical officers, &c. The wish is expressed in reference to this line that its success, coupled with the enterprise of the Japanese Government in the matter of railway development, will stimulate the sister empire, China, to take steps in a similar direction. An important new railway in course of construction in Japan is that connecting Yedo Yokohama, Hiogo, and Osaka. The Yedo and Yokohama section is finished, but with regard to the other portion it may not be completed until next year. The line between Osaka and Kioto has been surveyed. The first section of the trunk railway, intended to connect Yedo and Yokohama with Osaka and Hiogo, has been completed, as we before stated, and this first section has been opened with the greatest success. Already it attracts more traffic than it can conveniently carry on a single line of rails. The native public avail themselves of the advantages of the line to the utmost, and thus it appears certain that with these favorable conditions the railway system of Japan ere long will take a very material development. The Japanese Government have certainly been enterprising in regard to the matter. Telegraphs have also been largely introduced of late into the country, and nearly all the chief commercial ports have been or are being connected in this way. Altogether Japanese "progress" is a gratifying sign of the times.—*Herapath.*

Mortgage Taxation.

The Supreme Court of California has rendered an important decision affirming the unconstitutionality, in that State, of double taxation of mortgages or any other evidence of debt. In rendering its decision, the Court said:

The burdens of taxation cannot be shifted from those on whom the law imposes them, by stipulations between private persons; but, in the absence of such a stipulation, an inexorable law of political economy would impose upon the mortgagor the burden, in a different form, of paying the tax on the mortgage debt. Interest on money loaned is paid as a compensation for the use of the money, and at a rate of interest as agreed upon, is the amount which the parties stipulate will be a just equivalent to the lender. If, however, by the imposition of a tax on the debt, the government diminishes the profit which the lender would otherwise receive, the rate of interest will be increased sufficiently to cover the tax, which in this way will be ultimately paid by the borrower. The transaction would be governed by the same immutable, inflexible law of trade, by reason of which import duties on articles for consumption are ultimately paid by the consumer, and not by the importer. The rate of interest on money loaned is regulated by the supply and demand which governs all articles of commerce, and the burdens imposed by law, in the form of a tax on the transaction, which would thereby diminish the profits of the lender, if paid by him, and will prompt him to compensate the loss by increasing to that extent the rate of interest demanded. If his money would command a given rate of interest without the burden, he will be vigilant to see that the borrower assumes the burden, either by express stipulation, or in the form of increased interest. This is a law of human nature which the statute laws are powerless to suppress, and which pervades the whole realm of trade governed by the law of supply and demand. Nor would the enactment of the most stringent usury laws produce a different practical result. Human ingenuity has hitherto proved inadequate to the task of devising usury laws which were incapable of easy evasion; and wherever they exist, they are and will continue to be subordinate to the higher law of trade which ordains that money, like any other article of commercial value, will command just what it is worth in the market, no more and no less. Assuming these premises to be correct, and I am convinced they are, it results that it is the borrower, and not the lender, who pays the tax on borrowed money, whether secured by mortgage or not. But, if secured by mortgage, he is taxed not only on the mortgage property, but on the debt which the property represents, and which is held as a security for the debt.

Cruelty to Animals.

The *N. Y. Herald* of 30th ult. re published the Law of the United States in reference to "Cruelty to Animals," given in our issue of the 6th, with the following comments:

We publish to day the text of a humane and acceptable law which was passed at the last session of Congress and which goes into effect to morrow. It seeks to put a stop to the cruel practice of carrying cattle long distances and detaining them on roads for days, shut up in closely packed cars or boats, without food, water or rest. The law provides that when cattle, sheep, swine or other animals are carried from one State to another in vessels, boats or cars, where they cannot and do not have proper food, space and opportunity for rest, they shall not be kept in confinement for a longer period than twenty-eight hours, including all stoppages and transfers from road to road, at the end of which time they shall be released for five hours for rest, feeding and watering. The expense of food, care and custody is made a lien on the animals, and every violation of the law is punishable by a fine of from one to five hundred dollars, its enforcement being placed in the hands of United States marshals and their deputies. The law will evidently be a difficult one to carry out, but it is to be hoped that the officers will find some way to detect its violation and to rigidly enforce its penalties.

Baltimore's Railway Facilities.

Baltimore is not unfrequently referred to as a "slow" place, an overgrown village, and in other ways our city is made the subject of scurrilous remarks. These remarks can only be directed to matters of public improvement, which the citizens of Baltimore lament as much as outside people. In matters of commerce, railroads and business improvements, Baltimore can justly refer to with pride, and the following statement, compiled from the railroad time-tables, and showing the number of trains leaving the various railroad depots in this city every twenty four hours, may be of interest.

At the Baltimore and Ohio Railroad main line depot at Camden Station, six express and eight local trains arrive and leave for the West, making connections at Cincinnati, Columbus and Sandusky for all points in the West and Southwest. Sixteen express and sixteen local trains leave and arrive on the Washington Branch, most of these trains making connections at Washington for all points in the South. The local trains stop at every station, for the benefit of those living in the country and doing business in the city.

There are also ninety freight and passenger trains that leave from and arrive to the various stations of the Baltimore and Ohio Railroad located about the city, and go to all parts of the West and South. To carry out this daily schedule 250 passenger coaches, 8,000 freight cars, and 450 locomotives are used.

At the Northern Central Railway depot, Calvert Station ten express and twelve accommodation trains leave for and arrive from the North and Northwest, and make connections for all points in the West and Southwest, via Pennsylvania Railroad, its branches and connections. There are also 32 through and 4 local freight trains making the same connections, and to carry out the daily work 80 passenger coaches, 800 freight cars, and 164 locomotives are used.

On the Baltimore and Potomac Railroad and leaving Calver sttation, there are ten express and ten accommodation trains leaving for and arriving from Washington; four express trains of this number leave and arrive at Union Depot, Charles street, and nearly all make connection at Washington for all points in the South and Southwest. The rolling stock daily employed numbers fifty passenger coaches and twenty-five locomotives.

The Western Maryland Railroad have arriving to and leaving from Calvert Station four express and four accommodation trains, and four freight trains. This schedule employs daily ten passenger cars, twelve engines and fifty freight cars.

On the Philadelphia, Wilmington and Baltimore Railroad there arrive at and leave from President Street Depot twelve through and two way passenger trains, and twelve express and two way freight trains. These all make connections for the North and Northwest, and also with the Philadelphia and Baltimore Central Railroad for Port Deposit. Fifty-one passenger coaches and one hundred and seventy-five freight cars are daily employed.

The Baltimore and Drum Point Railroad is approaching completion, and will soon swell the number of trains arriving to and leaving the city. Other railroads are contemplated and projected, and the foregoing statement will soon be increased very largely, and the railway facilities of Baltimore will increase in proportion with the demands of the immense volume of trade seeking this port as its natural outlet.—*Balt. Am.*

☞ Interest coupon No. 6 on Land Grant Bonds and Interest Coupon No. 1 on Consolidated Mortgage Bonds of the Atchison, Topeka and Santa Fe Company will be paid in gold on and after Oct. 1, 1873, at the office of the company, No. 15 Devonshire street, Boston. Holders are requested to furnish a schedule of their coupons, with numbers, at or before the time of payment.

☞ The officers of the Cincinnati and Terre Haute Railroad, recently elected, are: L. A. Burnett, President; James B. Foley, Vice-President; A. B. Quackenbush, Secretary and Treasurer.

COSTS LESS Than One Half the Price of a FROST PROOF TANK.

The Engineer in charge of the Locomotive attaches the Hose A to a steam valve in the boiler. Steam passed through the pipe D and slip joint F into the globe H, producing a vacuum; the water is then lifted through the pipes I I and forced through the column E and hose C into the tender, filling any ordinary tender in about three minutes. When steam is shut off all the water in the pipes returns into the well, and any condensed steam passes off through the drip valve G, leaving nothing to freeze. The handle B serves to turn the discharge pipe and hose in any direction. The water delivered into the tender is warm, thus utilizing the steam used. The discharge tubes, represented above made of hose, can be made of iron if preferred.

WELLAND CANAL
ENLARGEMENT.

Notice to Contractors.

SEALED TENDERS, Addressed to the undersigned, and endorsed "Tender for Welland Canal," will be received at this office until noon of

Saturday, the Eighteenth Day of October Next,

For the construction of fourteen Locks and fourteen regulating Weirs, a number of Bridge Abutments and Piers—the excavation of the Lock and Weir Pits—the intervening Reaches, Race ways, &c., on the new portion of the WELLAND CANAL, between Thorold and Port Dalhousie.

The work will be let in sections, six of which, numbered respectively 2, 3, 4, 5, 6, and 7, are situated between Port Dalhousie and St. Catherines Cemetery, and three (numbered 12, 13 and 14) extend from the northern side of the Great Western Railway to near Brown's Cement Kilns.

Tenders will also be received for the enlargement and deepening of the prism of the present Canal between Port Robinson and the Aqueduct at Welland; work to be let in sections, each about a mile in length.

Tenders are also invited for the completion of the deepening and enlargement of the Harbor at Port Colborne.

Maps of the several localities, together with Plans and Specifications of the work, can be seen at this office, on and after THURSDAY, the TWENTY FIFTH day of SEPTEMBER instant, where printed forms of Tender will be furnished. A like class of information relative to the works north of Thorold, may be obtained at the Resident Engineer's Office, Thorold; and for works at and above Port Robinson, Plans, &c., may be seen at the Resident Engineer's Office, Welland.

All Tenders must be made on the printed forms supplied, and to each must be attached the actual signatures of two responsible and solvent persons, residents of the Dominion, willing to become sureties for the due fulfilment of the contract.

This Department does not, however, bind itself to accept the lowest or any Tender.

By order,
F. BRAUN.
Secretary.

Department of Public Works,

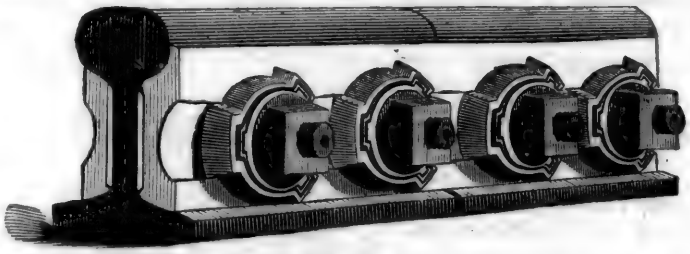
THE LOCK-NUT & BOLT COMPANY OF NEW YORK,

No. 61 Broadway, New York.

Manufacturers of all kinds of **BOLTS** for FISH-BARS, BRIDGES, CARS, MACHINERY, &c., with the "CUMMING NUT-LOCK," the only method of locking a nut to the bolt.

PATENTED June 16, 1868.

IMPROVED August 23, 1870.



Unequalled for Cheapness, Simplicity and Effectiveness.

DESCRIPTION.—A pointed copper key is placed in a groove cut in the threaded part of the bolt, *over which* the nut is screwed to its position, cutting its own thread in the copper, thereby taking up all the slack between the bolt and the nut. By riveting up against the face of the nut the projecting portion of the copper key, the nut is firmly locked in its position, but can be readily adjusted or removed with a wrench without injury to either bolt or nut.

Severely tested for over *four years*, they have *never failed*, and are *now in use on over fifty Railroads*, giving perfect satisfaction. We solicit a trial *anywhere*.

Licenses Granted to R. R. Companies, Car Builders and others.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,

IRON AND STEEL MANUFACTURERS,

No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

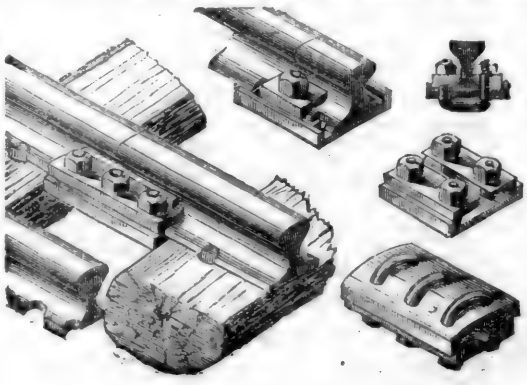
The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.



That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

FISHER'S PATENT

Wrought Iron

RAIL JOINTS,

MADE BY

FISHER & NORRIS,

TRENTON, N. J.

The Superiority of these Joints has been proved by eight years' use on different Roads.

Who shall Control our Railroads?

We think the signs of the times clearly portend that a radical change is impending in the manage ment of the railroad system of the country. Precisely what that change may be, or just how it will be effected, it is as yet too early to predict.

We are sure, however, that we hazard nothing in saying that the Grangers, as they are called, the farmers of the country, are destined to play a most important part in effecting that change, whatever it may be. That large and influential class of our people, aided by several others scarcely less numerous and important, will, when united, be almost omnipotent, when they come to make their demands upon our several Legislatures for enactments bearing upon and restraining railroad corporations. These Grangers, or associations of farmers, are already quite numerous, especially throughout the West, are rapidly multiplying there, and are indeed spreading throughout all the States. Like many other popular uprisings occurring in our day, the farmers in the flush of success will, we fear, make demands for such severe legislation as will, if allowed, not only depreciate greatly the value of railroad property, but seriously impede their operations and progress, and consequently impair their usefulness as public carriers. It is the duty, we think, of those who foresee such a calamity, to sound the note of warning in time, and to urge moderation on both parties in the forthcoming contest.

That hostile legislation will be invoked to restrain and regulate the companies in their operations and charges, there is not the shadow of a doubt. But, in our opinion, separate State legislation will only make the matter worse.

Standing as an impartial adviser between the parties, we suggest that they mutually agree to sumbit the whole matter at once to the arbitrament of Congress; for that body, in our opinion, is the only one competent to deal adequately and justly with the whole subject. To that it will finally come, rest assured. There are besides, many reasons why our State Legislatures better not touch this subject at all. The National Legislature can alone deal properly with the subject; and that this body has ample power to do so, under the clause of the Constitution clothing it with power to regulate commerce and navigation, as well as intercourse between the States, we have not a shadow of doubt. Such a tribunal would, no doubt, do justice to both parties, and harm to neither, while its enactments, emanating from the highest legislative source in the land, would command respect and be the more readily acquiesced in by everybody.

Therefore, believing that the solution of this most important problem should and will devolve finally upon Congress, we cannot perhaps do a better service than to give a short synopsis of the English act of Parliament on the same subject.

That Government has taken the bull by the horns in assuming complete jurisdiction of all matters whatever between the railway and canal companies and the public. The act of Parliament referred to is new, and went into operation on the first of last month.

It would appear that the action of the British Government was somewhat precipitated, if not directly induced, by a threatened fusion of several of the great railway lines of the Kingdom. The prospect of a huge monopoly considerably hurried up things. So a joint committee of the two Houses was raised to examine into and report upon the subject. During numerous sittings a vast amount of testimony was taken, and a report thereon made, embracing all the chief features of the law under which the existing commission was appointed. It was found by the committee that no tribunal in the country possessed the requisite qualifications and powers for treating adequately the various questions of passenger and goods rates, competition, consolidation, extension and general protection of the public; all which and many others would come before this new court for adjudication.

The Board of Trade have not proper judicial functions; all the law and equity courts were sadly deficient in the requisite practical knowledge of the subject, while a joint Committee of Parliament would possess no permanency. So from sheer necessity, an entirely new tribunal had to be established, and the result was the present commission, whose members are appointed by Government. These are, Sir Frederick Peel, Mr. Price, formerly a member of Parliament from Gloucester, and a Mr. McNamara, a lawyer, appointed on account of his reputed knowledge of all laws relating to railways, this latter being a requirement of the organic act.

This tribunal is to be assisted by two assistant commissioners, and also by such assessors as the commission may elect, and may be removed for good cause shown, by the Lord Chancellor.

Every member of the commission is obliged by law, within 21 days after his appointment, to sell all shares of Railway or Canal stocks he may possess; and he is inhibited from buying any during his official incumbency. Besides, should any such property vest in him during that period, in any manner whatever, he must proceed to dispossess himself of it in the manner before stated.

From a casual glance at a synopsis of the act, as we find it in our English exchanges, the functions of this commission are novel and somewhat extraordinary. Whenever any person, in a written complaint, charges a canal or a railway company with extortion or violation of law, the commissioners are required to demand an explanation from

the offending party. And whenever any dispute arises between any two companies this tribunal must proceed to adjudicate it.

They have full power to examine and settle all questions arising under the laws respecting through traffic, way rates and the like; and they can define what is, and what is not reasonable time and facilities, for receiving, forwarding, delivering, storing and handling of goods, and also what is improper preference or favor to any person or company, and the remedy therefor.

The hearing and settlement of all sorts of complaints by local authorities is also provided for, as well as the regulation and publication of rates and terminal charges, where the same are not previously fixed by law.

This Commission is also authorized to prohibit or restrict all engagements or contracts whereby the ownership or control of any canal may be given up to a railroad company, and *vice versa*. Maintenance and good repair, with fullest facilities for business on all these throughfares must be insisted on by the commission.

They are bound also to determine all questions of both law and fact; can enter upon and examine any railway or canal property; may command the attendance of witnesses, and proceed to their examination under oath; can compel the production of books and papers, and punish for contumacy or contempt in the same manner as a court of law.

Thus it will be observed that Great Britain has really started out on the experiment in legislative control of her canals and railways. The law enacted for the purpose, as well as the tribunal created by it, are novel and almost radical. If the experiment fails, it will not be for the want of ample power and jurisdiction.

While these and similar questions are becoming subjects of lively discussion among us, the result of the present attempt at Parliamentary control over the subject in Great Britain, will be awaited with the deepest interest; and if the great question of railway control among us must be entered upon, we suggest it would be well before starting out upon an untried experiment in matters of such magnitude, to wait awhile and carefully note the working of the new system among our British cousins across the water.

Pennsylvania Railroad.

The Pennsylvania Railroad Company furnishes the following figures of the earnings for the month of August and for the eight months of the year, compared with the earnings in the same time last year: Earnings in August, 1873, $1,996,133 15; same month last year, $1,862,100 45; increase, $134,032 70. Earnings from January 1, 1873, to September 1, 1873, $16,252,705 02; same period last year, $14,148,624 32; increase, $2,104,080 70. The same ratio of increase for the remainder of the year will show an increase for 1873 over that of 1872 of more than three millions of dollars. The loan recently so satisfactorily negotiated by the company in England is sufficient to liquidate all the company's current liabilities, leaving entire the large and steadily increasing net revenues to the payment of interest and the usual semi-annual 5 per cent dividends, which, at present, there is no reason to doubt will be continued.

Ship-Building in Delaware.

The Wilmington, Del., *Commercial* says that the steamer Johns Hopkins was launched on the morning of the 1st inst. from the yards of the Harlan & Hollingsworth Company in that city, and then adds—

This vessel was built for the Merchants and Miners' Transportation Company, and will ply between Baltimore and Boston. She is named after Johns Hopkins, of Baltimore, a stockholder in the company, who by his munificence and philanthropic donations from the immense worldly fortune of which he is possessed, is familiar to many of our people. The Hopkins is a fine propeller steamer, 250 feet long, 38 feet in depth of hold, 26 feet in breadth of beam and of 1,800 tons burthen. She has three decks, is built in five watertight compartments, and is schooner rigged. Her machinery will consist of one inverted, direct acting, surface condensing, propeller engine, with cylinder 60 inches in diameter and 40 inch stoke. Her propeller wheel is 13 feet 3 inches in diameter, and has 21 feet pitch. The steam will be generated in two tubular boilers. Seam hoists will be built at the hatchways, and steam attachments will be provided for working the windlass.

The Johns Hopkins is the seventh steamer of the line for which she is building. Of these three others—the S. R. Spalding, built in 1859, the Ben DeFord, in 1860, and the William Crane in 1871—were constructed by the Harlan & Hollingsworth Company, while the three others were built in Eastern cities. It is a significant fact, however, in connection with the ability of the Harlan & Hollingsworth Company to turn out strong and satisfactory work that the whole of these last orders should be given to them.

[From the Boston Journal].

Vermont and Canada Railroad.

STATEMENT OF THE DIRECTORS.

Perparatory to the annual meeting of the Vermont and Canada Railroad, which occurs at White River Junction, Vt., Oct, 16, the directors of that corporation have got ready a long statement to the stockholders, with full details concerning its lease and the operations of the receivers. They review the history of the road since the lease was given, and charge that the receivers, by unwise leases of undesirable roads at excessive rates, have gone heedlessly into debt, and that their contracts with the car companies were expensive for the road, and very remunerative to the companies, among whose proprietors were the managers of the road. They state the increase of the debt in five years at $3,495,813 68, being at the rate of $700,000 yearly, or more than the entire earnings of the company. The receivers, according to the directors' statement, finding the earnings insufficient to carry the burden they themselves had added, denied the prior right of the stockholders to the rent, with the intention of first providing for the debt they had contracted. Upon this the directors appealed to the chancellor of the court in Vermont in which the old suit was brought, for an order on the receivers to comply with the provisions of the decree directing them to make payment of the rent from the net earnings. The application was withdrawn after being practically denied. The directors then made an application for leave to sue for the rent to the court appointing the receivers, but the application was denied. The after attempt of the directors to negotiate with the Central Vermont Railroad Company was met with the statement that they would not be prepared to negotiate until they had first acquired such a status as might be gained through the receivership which they expected to obtain. Concerning the condition of the road itself, the directors say:

"The railroad belonging to you in Vermont is sixty miles or more in length, extending from Burlington and Essex Junction (where it connects with the Vermont Central road), on the south, to Canada line and Rouse's Point, N. Y., where it reaches the Ogdensburg road on the north. In construction it is first-class in every respect; its grades nowhere exceed forty feet to the mile. It has two long and expensive bridges crossing Missisquoi Bay and Lake Champlain. The stations, workshops, building and grounds at St. Albans are of the most commodious, extensive and expensive kind, the value of which alone is not less than half a million dollars. The station at Burlington is also a large and fine structure; and you also own there very extensive and valuable wharf property along the lake shore; and we have no doubt that your railroad is capable of earning, and is now earning, though you do not receive it, a handsome income upon its present capital, and that it has a permanent value fully equal to the amount of the capital stock; and we know of no reason why you need to suffer any ultimate loss on your investment, if you shall firmly assert your legal rights and not be alarmed at the temporary denial of them thus far without the authority or sanction of any court or chancellor. The incidental expenses of the Vermont and Canada Railroad Company for some time past, payable to you (according to the decree), from the earnings of the Vermont Central line, have not been paid by the receivers. The amount so in arrear at this time is $8,250, and temporary provision has been made therefor by giving the notes of the treasurer, thereby creating a debt against the corporation to that amount."

On Tuesday the 14th, an informal meeting of the stockholders will be held at Union Hall, 300 Washington street, to give those who are unable to be present at the Vermont meeting an opportunity to act together.

The Flour and Grain Trade.

During the month of September the receipts of grain at this port by lake (including flour reckoned as wheat) were 12,389,001 bushels, an increase over the corresponding period of 1872 of 3,262,502 bushels, when they were 9,126,499 bushels. From the 1st of January to October 1 the aggregate receipts were 49,588,568 bushels—an increase over 1872 of 7,028,889 bushels, the figures of that year being 42,559,679 bushels. This exhibit shows greater receipts than have been known for many years—certainly during the last decade—in either the monthly or season's business.

The export of grain by canal since the opening of navigation to October 1 (exclusive of flour, 3,030 barrels) were 34,290,496 bushels; as compared with the corresponding period in 1872, viz., 33,355,134 bushels, they show an increase of 945,362 bushels. The shipments of grain this year compared with 1872 exhibit a decline of 9,406,275 bushels of corn, 1,663,777 bushels of oats and 271,268 bushels of barley; and an excess of 11,784,503 bushels of wheat and 492,179 bushels of rye. If the oat crop of 1872 had been equal to that of 1871, the condition of the corn of 1872 up to the standard of 1871, and the barley movement of 1873 had commenced, doubtless our lake receipts would have been greater, and our canal commerce would have attained much larger proportions.

The receipts of canal tolls at this place for September were $269,585 24, against $246,979 99 in September, 1872, showing an increase of $22,605 25. The tolls from the opening of navigation aggregate to October 1, $1,003,892 34—only a small decrease of $15,508 85 as compared with 1872, when the figures were $1,019,401 19. The number of boats cleared in September was 1,661, and from opening of navigation to October 1, 6,460; showing an increase for the month of 151, and for the season thus far of 191.

Canal freights to New York opened at 10½c. on

wheat and 9½c. on corn; gradually advancing to 13c. and 11c. on the 19th; from the 20th to the 24th wheat was shipped at 14c. and corn at 11½@11c., and from the 26th to the 30th inclusive at 12c. and 10c. respectively.

Lake freights declined about the middle of the month; coal was taken to Chicago at $1 per ton, and in some instances even at a lower rate.

The export movement from our elevators, by the Central and Erie Railroads, from January 1 to October 1, aggregated 7,220,835 bushels of grain of all kinds—showing an increase over corresponding period of 1872 of 1,608,149 bushels.

The receipts at Buffalo by the Lake Shore and Michigan Southern Railway for the three months ending October 1 aggregated 897,700 barrels of flour and 5,161,300 bushels of grain of all kinds. —*Buffalo Courier.*

New Haven, Middletown and Willimantic Railroad.

An adjourned meeting of the first mortgage bondholders of the New Haven, Middletown and Willimantic Railroad was held at the office of Hatch & Foote, No. 12 Wall street, New York on the 2d inst. The committee (Messrs. Sands, Camp and Anderson,) appointed at the last meeting to examine into the condition of the railroad reported that the road was found to be in good order, except that ballasting is required from Middletown to Willimantic, the average cost of which will be $250 per mile. The base and feet of the trestle work need filling in to protect them from frost. The ironwork of the valuable viaducts needs painting and cleaning to prevent it from rusting. These matters would require an expenditure of $5,000. Some other alterations are needed, involving an expense of $4,550—the total amount needed being $19,550. The road is almost destitute of rolling stock, and entirely unable to meet the requirements of the local business. With a suitable equipment they would obtain large freightage in stone lead, tin, brass and coal. The road is now able to run, beside the local trains between New Haven and Middletown, only one train per day between Willimantic and New Haven. Under these circumstances the road derives no benefit from through travel or business. At Willimantic, the Hartford, Providence and Fishkill, the Boston, Hartford and Erie, and the Air Line all converge; and the committee are satisfied that the Air Line must in time attract to itself a large and remunerative business. The rolling stock required to equip the road—part of it this Fall and part in the Spring—is fifty flat freight cars, forty box cars, six passenger cars, two engines and one baggage car, costing in all $134,500. With this equipment the committee believe that the earnings of the road could be doubled in six months, and that in two years time it could earn the interest on its first mortgage. The gross receipts for September were from seven to nine thousand dollars. The current revenues will probably enable the trustees to complete the deficiencies of its construction. The rolling stock, however, can only be supplied by those directly interested in mortgage bonds of the road. The committee recommended that a committee of three be appointed, to be known as the equipment committee of the New Haven, Middletown and Willimantic Railroad, to solicit and receive from the first mortgage bondholders and other interested parties such sums as they may be willing to contribute; the committee also to confer with the administrators of the road and purchase such rolling stock as might be deemed proper. The committee may make such arrangements as they may deem prudent for leasing the rolling stock to the administration of the road, stipulating for suitable compensation for its use for annual per centage, payment of its cost, and for an eventual transfer of the title to the rolling stock after the same shall have been fully paid for. All subscribers are to share in the moneys received by the committee in the proportion which the amount paid by each subscriber shall bear to the whole amount subscribed and paid for. The committee shall make no purchase or contract beyond the amount of subscriptions actually paid in; nor shall they have any power to bind the bondholders on account of any contract. No subscriptions to the said equipment fund to be binding until the sum of $50,000 should be subscribed.

The report and resolution were adopted, and Messrs. Hatch, Watson and Gondy appointed as the Equipment Committee.

Messrs. D. B. Hatch, A. M. Colgrove, A. E. Anderson, Samuel S. Sands and John N. Camp were appointed an advisory committee to confer with the trustees of the second mortgage who are now managing the road.

The amount of bonds represented in the meeting was $1,061,000.

The Iron Export from Great Britain.

An official statement of the export of rails from Great Britain for the month of August, and for eight months ending August 31st, 1873, when compared with corresponding returns for 1871 and 1872 confirms in many ways, the statements already published of the growth of the iron industry of this country. The strikes in the coal mines of England, and other causes, have injured the general business, but as the loss has been mainly in exports to America, the conclusion may be fairly drawn that the competition of our own works has influenced the decline in exports in as great a degree as the strikes, although some allowance must be made for a general falling off in the demand for rails. For the first eight months of 1872 the exports of rails to America amounted to 441,184 tons; in the corresponding period of 1873, to 204,873, a falling off of 128,131 tons. The entire exports for the same periods were, in 1872, 627,587 tons, in 1873, 499,456 tons, a falling off of 236,311 tons. The aggregate loss in exports to other countries than America was 108 180 tons—a smaller per centage of loss in proportion to the whole amount of such exports in 1873 than the per centage of loss in exports to America. The returns for the months of August in the two years exhibit still more strikingly the effects of home competition. The exports to America in August, 1872, were 57,171 tons; total exports, 94,982 tons; to America, August, 1873, 16,800 tons; total exports, 73,906 tons. Although America imported last month less than one third of the amount imported in the corresponding month of the preceding year, yet other countries increased their imports by nearly 20,000 tons, or more than the whole amount of America's imports for August, 1873. The cause of this difference in the effects of the strikes in coal mines is further shown by the fact that although the exports to America have been greatly decreased, the greatest per centage of such decrease was in exports to the United States. Our iron manufacturers, although possibly able to compete with those of Great Britain in all American markets, can do so with the least risk and greatest profit in the markets of the United States, and hence the first effects of competition show themselves in our own exports rather than in those of our neighbors. The decline of the iron trade in other branches than in that of rails is not so noticable, but in pig iron alone the exports to the United States have fallen off from 152,331 tons in the first eight months of 1872 to 78,408 tons in the corresponding period of 1873. —*Phila. Ledger.*

Portland and Rochester Railroad.

The annual meeting of the stockholders of this company was held at Portland, Me., on the 1st inst., President John Lynch presiding. The directors' report shows the road to be in excellent condition and quite prosperous. The earnings for the past year were $142,570 89, an increase over the previous year of $11 009 60. The expenses have been $101,595 46, an increase of only $612,81 over the previous year.

Special improvements have been made along the road, including a tank at Lebanon, woodshed at Rochester, turn-tables at Gorham and Portland, and repairs on Saco river and mill pond bridges, &c. All the bridges and track are in first rate condition, and the trains run with excellent regularity. The number of passengers carried was 142,846; tons of freight, 64,290.

The expense of running the road has been increased largely, and earnings diminished last winter owing to deep snows and the unusual severity of the season. The work on the marginal way is progressing finely, and a junction with the Grand Trunk this year is expected, the Directors assuming from the city the contract for the completion of said marginal way. The estimated cost of the specified work, $50,000, will be nearly if not quite sufficient. The importance of the Grand Trunk connection, giving the road access to the front harbor, and the proposed valuable connection with the Nashua and Rochester Road, now under construction, are enlarged upon. This road will be open to Epping by December, and to Nashua by next July. The sinking fund shows $45,479 89 to the credit of the company. The Directors' report was accepted.

The proposition of Hon. A. K. P. Lord of Buxton to contribute $25,000 cash toward a branch road from Saco river to Bonny Eagle, four and a half miles, for lumber business, if the road would raise the remaining $20,000, as also the questions as to the raising of means for additional equipment and for the extension of the road to the front of the city, were referred to a committee of directors to report at a special meeting.

The following were elected directors: John Lynch, Rufus E. Wood, H. J. Libby, A. K. Shurtleff and Frederick Fox of Portland: J. S. Ricker of Deering, Frederick Robie of Gorham, Winthrop G. Ray of York, E. G. Wallace of Rochester.

☞ The Harlan & Hollingsworth Company, Wilmington, Del., have nearly built for the Baltimore and Norfolk Steam Packet Company a new iron freight boat, costing $75,000, to be called the Seaboard, 500 tons capacity. The vessel will be launched in a few weeks, and as soon as finished will be placed regularly on the line between Baltimore and Norfolk, Va.

☞ Twenty miles of the Lynchburg and Danville Railroad, in Virginia, have been laid, and the road will probably be finished to Danville in a few months. It is a branch of the Washington City, Virginia Midland and Great Southern Railroad.

☞ The directors of the Boston, Clinton and Fitchburgh Railroad have voted to purchase 250 coal cars and five new locomotives.

Nashville, Chattanooga and St. Louis Railway.

To the Stockholders of the Nashville, Chattanooga and St. Louis Railway Company:

In conformity to the charter, the president and directors have the pleasure to submit the following report for the fiscal year ending June 30, 1873.

From the report of the general superintendent, it will be seen that the gross earnings of the company have been:

FROM THE CHATTANOOGA DIVISION.

Passage	$388,476 77
Freight	1,222,841 50
Mail	25,580 04
Rents and privileges	18,621 00
Total amount of gross earnings	$1,655,519 31
All expenses, ordinary and extraordinary, in operating and improving the road for the same time	1,182,787 66
Net income	$471,731 65

FROM THE ST. LOUIS DIVISION.

Passage	$230,305 19	
Freight	384,486 85	
Mail	15,002 35	
Rents and privileges	12,886 97	
Total gross earnings	$642,681 36	
Operating expenses	559,150 33	
Net income		83,531 03
Total net income for the line		$555,262 68

We feel fully authorized in saying that at least $100,000 more would have been added to the net income but for breaks in the Western and Atlantic Railroad, and closing of navigation by ice in the Mississippi River, referred to by the general superintendent, and for the additional reason, that the wheat crop in the West last season was comparatively a failure, from the transportation of which our roads received no income at all. With a full crop in Illinois and Missouri, a large quantity would have been shipped over your roads to flouring mills in Georgia. For weeks in the busiest season the ice blockade in the Mississippi River caused a suspension of through business down the river to Hickman, and closed the river against the transfer of through cars at Columbus from the St. Louis and Iron Mountain Railroad to our line. The burning of the bridge over the Oostenaula River, on the Western and Atlantic Railroad (our immediate connection at Chattanooga), in January, caused a blockade at Chattanooga, and a suspension of all through business for about two weeks. The temporary bridge placed over the river was so threatened and damaged by freshets, that about two weeks more of through business was lost to your line in February. To these causes, for falling off in earnings may be added the loss of business caused by the cholera epidemic, which prevailed to an alarming extent at Nashville and most of the towns along the line of your roads during the month of June and most of July. When these unforeseen and unusual causes of decline are considered, our estimate of $100,000, as the probable amount of net income lost, will appear quite reasonable.

The gross earnings for the fiscal year of the Chattanooga Division were	$1,655,519 31
Deducting the earnings of the Shelbyville and Jasper branches, 20 miles	12,932 28
The receipts of the main lines are	$1,642,587 08

An average of $10,878 per mile of road; and for the St. Louis Division $3,758 37 per mile of road; but for reasons given above, the average earnings would, we think, have been at least $700 more per mile. There are but few roads in the country whose average earnings per mile exceed those of the Chattanooga Division of your line, and the present earnings will be largely increased upon the completion of the line from Owensboro, on the Ohio River, in Kentucky, to Nashville, opening up new routes from Chicago and Louisville over your road to the South; also by the completion of the Cumberland and Ohio Railroad, now being built from a point on the Ohio River, opposite Madison, Indiana, to Nashville, crossing the "Short Line" in Kentucky, and thereby giving a new route to Cincinnati, and by a short branch, another line from Louisville.

The through business of these lines, when completed, will be added to the already large through business received from the Louisville and Nashville and St. Louis and Southeastern Railroads and the St. Louis Division of your line, which taps the Mississippi River at Hickman, and by the Mobile and Ohio Railroad from Union City connects with the St. Louis and Iron Mountain Railroad at Columbus, and by boats to Cairo, with the St. Louis, Bellville and Southern Illinois Railroad short line to St. Louis. All of the large business from the North and West to the Southeast, coming from these roads, must pass over the Chattanooga Division of your line. We had, last year, by the completion of the line from Louisville to Montgomery, all the competition we are likely ever to have. Certainly the competition can not be increased materially for many years, as there is no line being built to add to it.

The report of the superintendent shows the encouraging fact that the local business of the Chattanooga Division increased the last year—

From freights	$49,296 56
From passage	12,692 61
Total	$62,989 17

The St. Louis Division of your line is a new road, the purchase of which from the State of Tennessee, was fully explained in last report. At the time of purchase this company took but two-thirds interest in the purchase, individuals taking the other one third. Subsequently, however, your directors believing it to be the best interest of this company to own the whole road, bought out the one third interest held by individuals, and now your company owns the entire road, by purchase from the State of Tennessee, which owned the first mortgage, and by purchase of second mortgage bonds and stock of the Nashville and Northwestern Railroad, the original charter name of the corporation.

The charter of the Nashville and Chattanooga Railroad Company has been amended, changing the name of the corporation from the Nashville and Chattanooga Railroad Company, to that of the "Nashville, Chattanooga and St. Louis Railway Company."

The gross earnings of the St. Louis Division of your road (formerly the Nashville and Northwestern Railroad,) for the last year, were about the same as those of the Nashville and Chattanooga Railroad (Chattanooga Division) at the same age of that road; and, as heretofore explained, the earnings for the last year over this Division would not have been increased materially, but for unexpected and unforseen causes, and the earnings will continue to increase as the country is developed along this new road, and its connections are improved by the completion of the Mississippi Central Railroad's extention to Cairo, which crosses your line near Ralston's Station, about 140 miles from Nashville, and by the construction of the Tennessee Central Railroad from Huntingdon on your road, 107 miles from Nashville, to Trenton, which will open up a fine local trade, and give an improved connection of your road to Jackson, Memphis, Mobile and New Orleans. Connection with these points may be further improved by a road more direct from Huntingdon to Jackson, which this company has under consideration. Another road of vast importance to the St. Louis Division, in fact, to your whole line, is the "River Road," as it is called, from St. Louis to Hickman. A strong company for the construction of this road has been organized in St. Louis, and a preliminary survey of the route has been made, which from the report of the engineer, proves to be very satisfactory. It will shorten the distance by your road to St. Louis about thirty-five miles, as compared with your present connection with the St. Louis and Iron Mountain Railroad, and give you two all rail connections with packets, at Hickman, on the Mississippi River, and at Johnsonville, on the Tennessee River. At McKenzie, 119 miles from Nashville, we cross the Louisville and Memphis Railroad. Near Gardner's Station, 142 miles from Nashville, we cross the Cairo extension of the Mississippi Central Railroad. Three miles east of Union City, 152 miles from Nashville, we cross the Paducah and Memphis Railroad, and at Union City, 155 miles from Nashville, we cross the Mobile and Ohio R. R. and over that road have our all rail connection with St. Louis by the St. Louis and Iron Mountain Railroad from Columbus, at which place all through cars are crossed over the Mississippi River by means of boats.

It is encouraging to notice that the local business of the St. Louis Division, both freight and passenger, shows an increase for the last year. Freight, $29,644 54, and passage $36,036 21, a total of $65,680 75. The through travel over this road also shows an increase of $36,474 21, while the through freight business fell off $80 974 67 from causes already stated, leaving as net increase $21,179 99.

Our connections at the South have been increased and improved since last report, by the completion of the Augusta and Port Royal Railroad.

Your road is now a trunk line in the route from the North and West to the Southeast, with connections in the Southeast running through Georgia and South Carolina to Charleston, Savannah and Port Royal, the latter having one of the best harbors on the Atlantic coast, with a fair prospect of having, at an early day, a line of steamships running between that port and Liverpool.

At the North you connect with Louisville, Cincinnati and Chicago, and in the West with St. Louis, which, with her natural advantages in rivers, running for thousands of miles, draining the finest sections of the West for the production of cereals and the raising of live stock, and her avenues of commerce by rail, extending in all directions, even to the Pacific coast, must very soon become the distributing point for the great West, when the produce and supplies for Georgia and the Carolinas will pass over the entire line of your two roads.

When foreign transportation through Port Royal is secured, and the necessary facilities provided at that place for taking bulk grain out of the cars, and placing it in the vessel; with suitable elevator at Hickman, on the Mississippi River, and through cars, already provided for, hauling grain in bulk, running from St. Louis by our present all-rail connections, the transportation of grain in bulk from the West to the seaboard for shipment to foreign markets will then be practicable; and we think our roads will at an early day, do a fair share of this business, which is now done over Northern and Eastern roads through New York. As soon as steamship connections are provided for at Port Royal, we hope to secure the importation of foreign goods for Western cities through that port and over your roads; also a share of the immigration for the West coming from the Old World. When Port Royal is once established as a shipping port, we see no reason why a large business may not be done in the shipment of flour from the West through that port to the West Indies and South America, and the return of large quantities of tropical products to be passed over your roads.

You now have 341 miles of railway—321 miles of main line and 20 miles of branches, besides 30 miles of side tracks—all in good order, with a full outfit of 33 engines, and 1,164 cars of all kinds, in good order, together with large quantities of real estate for depot purposes, and timbered lands for fuel.

This property represents, as shown by the treasurers' statement marked "A," which includes present capital stock and new bonds to be issued, $13,286,049 44.

Estimating the value of the road including side tracks, branches, &c, at $40,000 per mile for 341 miles, you have	$13,640,000
and engines, cars, tools, depot buildings, depot grounds and other real estate, at	2,000,000
and you have	$15,640,000
As the present value of your property, against which is charged	
Capital stock	6,486,049
New mortgage bonds at $20,000 per mile, the proceeds of which, if all are sold, will much more than pay off all obligations of every kind	6,800,000
	$13,286,049

Besides important improvement made in the roadway annually and charged to operating expenses, net profits, before and since the war, to the amount of $1,500,000, have been expended in bettering the condition of the road, and adding to the outfit of the Chattanooga Division alone, mostly since the war, in addition to all dividends paid to stockholders and interest on funded debt and reduction of that debt by the purchase of bonds.

About $900,000 have been expended in improving the roadway and adding to the outfit of the St. Louis Division, (formerly the Nashville and Northwestern Railroad,) and in payment for second mortgage bonds and stock of the old company, since its purchase from the State.

The road is now in first-class condition, and fully equipped, with engines and cars in good order, with plenty of depot grounds, etc. And in future the company will be able to divide and pay to the stockholders what it makes after paying interest on its bonded debt, which we think cannot amount to more than $375,000, after the sale of the new bonds, and paying off all indebtedness, as explained in this report.

The interest account will then stand as follows:

Interest on $1 425,000 indorsed bonds at six per cent	$85,500
Interest on $20,000 unindorsed bonds at six per cent	1,200
Interest on $1,000,000 to United States Government at four per cent	40,000
Interest on $3,500,000 new first mortgage, six per cent gold bonds, equal at present to about seven per cent in currency.	245,000
	$371 700

This item of interest may be somewhat increased or reduced, by the sale of more or less new bonds.

Taking the average increase of earnings for the last five years, and we think it entirely safe to estimate the receipts of the line at $2 550,000 for the next fiscal year, and net profits at 30 per cent. or $765,000, which will leave $390,000, after paying all interest on bonds to be divided among the stockholders, being six per cent per annum on $6,486,149 44, the present capital stock of the company.

As soon as the other connections, now being built, and referred to in this report, are finished, we think the gross earnings of your line cannot be less than $3,000 000, and that at least 33 per per cent, or $990,000, will be net earnings; leaving $590 000 to divide among the stockholders, being over nine per cent per annum on the capital stock of $6 486,000, after paying interest on bonded debt allowing that the interest account may be increased to $400,000, and so continue to improve as the country through which your roads run is developed, and important new connections made.

In conformity to legislative authority, and by direction of the stockholders, given in annual convention the 14th of August, 1872, your directors are now having prepared a first mortgage bond on the whole line and branches, not to exceed twenty thousand dollars per mile, the proceeds of which will be applied; first, to secure the payment of the present mortgage debt on the Chattanooga Division, consisting of $1 425,000 of the company's six per cent bonds, indorsed by the State of Tennessee, falling due at various dates in the next thirteen years; $20,000 of unindorsed six per cent bonds of the company, falling due July 1, 1878; and $364,165 six per cent bonds of the State of Tennessee, loaned to the company, and $1,000 000 of four per cent bonds given to the United States Government, for rolling stock, etc., one-half of the bonds given to the Government falling due 1st of June, 1881, and the other half June 1, 1891, and payment to the State of Tennessee for her interest in the Nashville and Northwestern Railroad, of $2 400 000 in Tennessee State bonds, with January 1, 1871, and subsequent coupons, attached.

These obligations are all, of every kind, outstanding against either of your roads, except a small floating debt of about $250,000, balance on account of improvement of roadway, and increase of engines and cars; and $148,220 due for interest on indorsed bonds, which accrued during the war, and which is fundable under the law of the State. This small floating debt will be paid out of the proceeds of new bonds, together with balance of liability of $480,520, on account of improvement of road-way and added to outfit of the St. Louis Division, which amount is to be carried by our financial agents until the new bonds are sold, and the surplus proceeds of these new bonds will be held to be used for the best interest of the company as may be seen by the directors or instructed by the stockholders, leaving all future profits to be divided among the stockholders after the payment of interest on bonded debt.

This company has paid to the proper officer of the State one half of the $2,400,000 of the Tennessee bonds referred to above, being all of the installments due at this date, and will soon be ready to pay over in advance, the balance of this item, together with balance of $364,165, loaned to the Nashville and Chattanooga Railroad. These aggregate amounts will be greatly reduced by discount in the purchase of the State bonds.

To secure the prompt redemption of the $1,425,000 of the company's bonds, indorsed by the State, a similar amount, dollar for dollar, of bonds now to be issued, will be deposited with the Comptroller and withdrawn as the old bonds can be bought up.

For the amount of unindorsed bonds of the company, $20,000, and the four per cent debt of $1,000,000 to the United States Government, a similar amount of the new bonds, dollar for dollar will be deposited with the "Real Estate Trust Company" of New York, trustee for the new bonds.

The character of these new bonds (being six per cent gold bonds) and the character of indebtedness (as above stated) for which they will be deposited, will give, of course, much greater aggregate value to the new bonds.

These provisions made, will leave $4,375,000 of the new bonds to be sold now, the proceeds of which will meet all of the wants of the company indicated above, and leave a handsome cash surplus to be used in improving connections, or in some other way increasing the influence and interest of the company, if all the new bonds are sold.

These new bonds will run for forty years, with interest at six per cent per annum, payable semi-annually; and both interest and principal payable in gold, and will be a first mortgage on the line of road, and all the property of the company of only $20,000 per mile; while the line of road alone, could not now be constructed and put in its present good condition for less than $40,000 per mile, to say nothing of the large amount of property in engines, cars, tools, depot buildings, depot grounds, real estate, etc., which in addition to the road, is mortgaged for the security of these bonds.

For these reasons, we think they must take a high rank in the bond markets of the world, and be much sought after by capitalists.

The second mortgage bonds, heretofore issued but not used, are all to be cancelled before the new first mortgage bonds, referred to in this report are issued.

The Nashville, Chattanooga and St. Louis Railway, is in its infancy, and by enlightened, liberal and energetic management, can be made one of the most important and profitable lines in the country; being the shortest line from the West to the Southeast, and besides all rail connections with Louisville, Cincinnati, Chicago and St Louis in the North and West, and with New Orleans, Montgomery, Mobile, Atlanta, Savannah, Augusta, Port Royal, Charleston and Wilmington, in the South and Southeast, has the Mississippi, Tennessee and Cumberland Rivers to draw from.

It is both instructive and encouraging to notice the increase of local business, especially in the transportation of coal, and while this business now averages about forty-five cars per day, for working days, the year round, we may consider its development as just begun; the supply tributary to the Chattanooga Division is inexhaustible, and of the best quality of bituminous coal suitable for grates and manufacturing purposes, with a constantly increasing demand at Nashville and south of us.

Our business relations with the managers and officers of all connecting railroads continue to be of the most satisfactory character.

The use of steel rails on the Chattanooga Division has been determined on for future repairs or renewals.

It is gratifying to note with what freedom from accidents your roads have been run during the last year, showing intelligence and fidelity on the part of the officers, agents, and other employes of the company.

Attention is directed to the balance sheet of the treasurer, which shows the cost of the line, outfit, depot grounds, real estate, etc., and the financial condition of the company; also to the report and statements of the superintendent, showing in detail the workings of the line, and to the report of the resident engineer, showing the operations in his department, and present improved condition of your property.

The increasing prosperity of Nashville as seen by shipment over your roads, is a fact, gratifying to your directors.

In conclusion, the directors congratulate the stockholders upon the present good condition of the company and flattering prospects of future prosperity.

Submitted on behlaf of the directors by

E. W. Cole, President.

Nashville, August 13, 1873.

☞ Two construction trains, comprising two locomotives and thirty cars, are now employed on the New York, Boston, and Montreal Railroad between Kings Bridge and Brewster's Station. About four miles of track have been laid at the lower or Kings Bridge terminus, and six to seven miles in the neighborhood of Brewster's. Rails will hereafter be laid at the rate of a mile a day, half a mile at each end, until the road is completed, in about forty to fifty days hence. It is the intention of the company to keep the channel of the Harlem River open for the passage of their steam-boats during the Winter months.

☞ The Philadelphia *Ledger* reports the total anthracite coal tonnage for the week ending September 27, at 477,514 tons, and for the coal year 14 836,878 tons, against 14 179,752 tons to corresponding time last year, being an increase of 657,126 tons. The bituminous tonnage for the week is 78,646 tons, and for the year 2,373,882 tons, giving a total of all kinds for the week of 556,160 tons, and for the year of 17,210,561 tons, against 16,240,841 to same time last year, being an increase of 970,720 tons.

RAILROAD EARNINGS—MONTHLY.

Central Pacific (in gold):	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Total.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An asterisk (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "†."

American Railroad Journal.

Saturday, October 11, 1873.

Stock Exchange and Money Market.

The Money movement, though very gradual in its progress, has been more favorable to responsible borrowers. The supply has been on the increase, and rates have been settling to a more uniform and less oppressive basis. Call loans have been quoted off to the legal rate of 7 per cent, and in instances a fractional commission, for prompt accommodation. And in the discount line, the quotations have been from 10@18, generally 12@15 per cent per annum, on marketable grades of business paper. The demand for aid has been, of course, quite active, but lenders have been meeting it with more readiness and liberality. The city banks have been considering their resources, and have made encouraging headway in this direction. Their deposit line has been augmented, indicating reviving confidence in the general situation. They have not as yet resumed the publication of their weekly averages, and probably will not do so until they shall have retired and cancelled the interest bearing certificates made use of during the severity of the pressure for Clearing House purposes, and the need for which is now diminishing with the improvement in business affairs, and the certain, even if tardy, return of financial and commercial negotiations to their legitimate channels.

The U. S. Sub-Treasury, last week, reduced its currency balance $1,322,697, and added to its coin reserve $2,952,033. Its currency balance at the close of the week was $3,084,639; and its coin reserve $54,330,884.

The Gold movement has been less active, and under the influence in part of the free importations of specie from England, the price has declined and closed weak. The range of the price during the week as far as reported has been from 109⅝@110⅞, and the quotation on Wednesday was 109¾ against 110⅞ on Wednesday of the preceding week. The specie outflow last week, was $674 861, mainly in silver.

The cash balances of the Treasury Department on Tuesday were: Currency, $3,946 857; special deposits of legal tenders for the redemption of certificates of deposit, $11,300,000; coin, $81,-407,244. Coin certificates, outstanding, $38,589,-200; outstanding legal tenders, $358,649,000.

The customs demand for Gold last week, averaged $352 000 a day. The total customs revenue of the Government, in coin, at this port, since Jan. 1, 1873, has been $100,431,349, against $119,-420,941 during the same time in 1872. Government has disbursed through the U. S. Sub-Treasury here, on account of the coin interest on the public debt, since January 1, 1873, $55,235,-229, against $59,361,321 during the same time in 1872. The export drain of specie since January 1, 1873, has been $42,940,112 against $60,483,350 during the same portion of 1872.

Foreign Exchange has improved in price, and has been of readier sale, though closing irregularly, and rather lower. Bankers' sixty day bills on London closed on Wednesday at 107@107¼; sight bills on London, at 108@108¼. The week's exports of Domestic Produce have been to the enormous currency value of 8⅜ millions.

A much more confident demand has been noted for Government securities, prices of which have advanced, closing firmly and buoyantly. The inquiry has been mostly from investment buyers.

U. S. sixes of 1881 closed on Wednesday of this week at 115¼@115½; U. S. Five-Twenties of 1862, 109@109¼; U. S. Five-Twenties of 1864 at 110@110½; U. S. Five Twenties of 1865 111@111½; U. S. Five-Twenties of 1865 consolidated 113¾@114; U. S. Five Twenties of 1867, 115¼@115½; U. S. Five-Twenties of 1868, 114¼@114½; U. S. Ten-forties at 109½@110; U. S Fives of 1881 (Funding Loan) 107¾@108¼; Six per cent. currency Sixes from 111¼@111⅜.

Business in Railway and Miscellaneous securities has been more active at advanced prices, closing, however, rather variably.

There has been a fair average investment inquiry noted for State and Railway bonds, at much steadier prices. Central Pacific first mortgage six per cents closed at from 93½@94.

From the Central Pacific Railroad, the September statement of earnings is a very encouraging one; showing a total increase from earnings, for that month, of the large sum of $1,392,125, which largely exceeds those of any month since the road opened. The corresponding month last year the total receipts were $1,254,688 or $137,-437 less than the month just closed.

The import entries of foreign merchandise at New York, including dry goods, amount for the past week to $7,764,447.

General business has been quite brisk in the line of dealings in Breadstuffs, especially for export, at firmer prices. Cotton, has been offered less freely and quoted higher, but has been quiet. Provisions have been moderately sought after, closing irregularly. Petroleum and Naval Stores in better demand, and held more confidently. Tobacco, Wool, Hemp, Seeds, and Metals have been quiet; Metals closing in favor of buyers. Groceries have been inactive and depressed. Live Stock have been held higher, but have been quite moderately dealt in. Ocean freights closed less firmly, on a tamer movement.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

Coal and Iron—Coal Superseded—Vapor Fuel.

It has been well said that iron and coal are the corner stones of England's commercial supremacy. But we think it also true that a cunning hand and an inventive brain were equally efficacious and essential in arriving at that result.

Whether this or that nation is henceforth to take the lead in the arts and manufactures, or whether the United States are bound to distance all other nations in the great international struggle for control of the markets of the world, we are not now to stop to inquire.

This point alone we wish simply to record just here and now. The sceptre of "King Coal" is about to pass away. A new heating agent has been discovered and utilized, that is a complete substitute for coal in its every possible application.

We may properly state that we have recently secured for the JOURNAL, the services of a writer and scientist who has made the subject of fuels and combustion, a practical study continuously, for ten years past, and therefore knows whereof he speaks.

The line of his researches has been in the direction of gaseous or vapor fuel rather than solid fuels.

This writer, who is an inventor or discoverer as well, assures us that when the results of those discoveries shall practically be made known, and the new fuel system put into general use, the great coal monopolies and combinations will melt away like snow at the touch of fire.

Those monopolies have chosen the worst possible time for attempting to rivet upon the public their schemes of extortion; for the new fuel, Vapor Fuel as it is properly called, or rather the basis of it, Petroleum, is at this very time being produced in almost fabulous quantities, in all the old and in some new oil bearing districts in our country.

Yes, Petroleum, and all similar substances, are the articles to be used for the production of this new fuel. It is first converted into a gas, and then intermixed with the requisite amount of air and steam under proper conditions, and this product conducted in pipes to the place of combustion and thus ignited and burnt in suitably constructed furnaces.

As a steam fuel, coal, by comparison with it, is nowhere, for its various advantages in this respect admit of no comparison. For reducing and refining ores, for working in iron, steel and metallurgy generally, its merits are infinitely superior to any other fuel.

From the total absence of sulphur and all other hurtful ingredients, Vapor Fuel produces from the poorest of ores, even a better than charcoal iron.

While the results obtained are so greatly superior, it is gratifying to know that the cost of this fuel is less than half that of coal, and the supply increasing and unlimited.

We deem it most fortunate that this great discovery has been perfected at this time, when the price of coal seems to be going up, and the supply of Petroleum so very abundant and cheap.

The great industries of the countries are in process of rapid developement and change, especially

in all those branches relating to iron and steel; and who knows or can predict what important results will be due to the discovery and application of "Vapor Fuel" to the various uses we have named. That it is destined to become a substitute for coal, and to become also an important adjunct to metallurgy no one can doubt.

In this connection we may also state that Petroleum is already being used in many places to furnish illuminating gas, and the gentleman already referred to, connected with this office, informs us he has also devised a method whereby Petroleum and other Hydrocarbons may be successfully utilized to furnish all the fuel and heat of towns and cities, for warming, cooking, &c., in the same manner that illuminating gas is now served out and used.

This is indeed a novel and momentous innovation, and one well worthy the attention of oil producers, as affording a new field for its use, and a profitable relief from the evils of an increasing and already overcrowded supply.

Our associate will doubtless make himself heard soon through these columns on the above and similar subjects.

Safety Car Lamps.

It is only a few days ago that a careless employee on one of our railroads dropped his lighted kerosene lamp, and almost instantly a frightful volume of flame filled half the car, sending the passengers flying for their lives through the windows and every other way. Being an ordinary passenger car, they fortunately escaped with their lives, though many were seriously burned and otherwise injured.

But suppose this thing had occurred at dead of night, in a sleeping car filled with men, women and children, all wrapped in deep slumber. Filled with the most combustible of materials, cotton drapery and the like, instead of a miraculous escape, we would have had to record the sickening details of another fearful holocaust of fire; for in such case it would be a miracle indeed if one should escape.

Here, then, is a loud warning to all railroad companies; for we believe there are excellent devices for lighting up cars, whereby such accidents may be rendered impossible. Then we say, let a knowledge of all such inventions be heralded far and wide, and brought home to the knowledge of every company; and after that, if officers of roads neglect to employ the best known preventives of similar disaster, they will be called to a terrible reckoning in every case of fatal accident arising from such neglect.

☞ The receipts of the Central Railroad Company of New Jersey for the nine months ending September 30, 1873, were $6,552,033 13, the expenses $3,254,282 92, and the net receipts, $3,297,750 21. In the corresponding period of 1872 the receipts were $5,383,675 85, the expenses $3,138 083 01, and the net receipts $2,245,592 84—showing an increase in receipts of $1,168,357 28, in expenses of $116,199 91, and in net receipts of $1,052,157 37.

☞ The estimated earnings of the Kansas Pacific Railway for the week ending Sept. 22, are: freight, $46,596 72; passengers, $33,847 92—total, $80,444 64.

New Steam Passenger Car.—Rapid Transit.

The season is fast approaching when long-suffering New Yorkers must nerve themselves up to endure, as best they may, the terrible discomforts incident to snow blockades, and long, cold, weary hours passed in the horse cars going to and from business.

We see no way of avoiding for the coming winter, and indeed for many winters yet to come, the growing evil of past seasons, but in the immediate application to existing lines of a new steam passenger car, designed to take the place of horses and of dummies entirely.

The last Legislature authorized the employment of any new propelling power on the roads in any city, subject to the regulation of the municipal authority.

It is not a moment too soon to bestir ourselves in this matter.

The plan of the Improvement, as shown and explained to us, comprises a small steam motor of peculiar construction, placed underneath the car, propelled by steam generated by vapor fuel—the whole being noiseless, and without smoke, coals, ashes, cinders, or any puffing whatever. This motor can be worked anywhere from 5 to 20 horse power, can be applied to present cars, and will as readily draw a train of 4 to 6 of them, as one; and if the track could be cleared would run from the City Hall to Harlem in 15 minutes.

For humanity's sake let us try something this season—anything that promises relief, and thus afford some sort of an escape valve for the mountains of pent up indignation that are sure to be engendered by the lack of quick, comfortable transit during the long winter months, so near upon us.

We understand the owners of both the steam car and the rotary engine, as is usual with inventors, are without capital to push matters. Here, then, is a splendid opportunity for somebody.

By way of adding our mite, we will undertake to put any inquirers through this office in immediate communication with the inventor.

A New and Powerful Steam Engine.

We have been shown a small working engine of an entirely new style, which seems to overcome every objection hitherto urged against the rotary principle. Experts in such matters assure us that this machine possesses all the elements of complete success, and a perfect rotary, a desideratum long sought after by steam engineers. It is pronounced at once simple, extremely compact, of great power, economical to run, and can be built and sold for about half the price of any other machine of equal power.

That Fire Extinguisher.

What has become of that wonderful Fire Annihilator, the Stanton Fire Extinguisher, we believe it was called, over in Brooklyn, about which so much was promised, a little time ago? Has it gone up, or what's the matter? We are moved to make this inquiry because several of our friends have been making inquiries about it lately, who were waiting to buy, if it would perform half it promised.

☞ The earnings of the St. Louis, Kansas City and Northern Railway in September, 1873, were $286,242, against $232,819 in September, 1872—an increase of $53,424.

The principal of the public debt of the United States, July 1, 1870, amounted to $2,480,672,427, against $2,353,211,332 on the 1st of July, 1871, $2,253,251,328 on the 1st of July 1872, and $2,234,482,993 on the 1st of July, 1873. This last statement is made without regard to the interest due and unpaid, or accrued, or cash in the treasury at the dates named. By adding interest due and unpaid, and interest accrued, and deducting cash in the treasury for the past two fiscal years, we have the following result: Balance of obligations July 1, 1872, $2,191,486,343 62; balance of obligations, July 1, 1873, $2,147,818,713 57; leaving a net reduction during the fiscal year of $43,667,630 05. The reduction for three years, from July 1, 1870, to July 1, 1873, is $246,189,434. The net reduction during the last fiscal year being only $43,667,530, is rather less than one-fifth of the whole reduction as shown by the aggregate figures given. But this, as assumed by the *New York Evening Post*, is because the net receipts of the year 1872 exceed those of the year 1873 by forty one and a half millions, while the total expenditures of 1872 fall short of those of 1873 by thirteen millions. The cause of this falling off in receipts need not be specifically examined at present, further than to say that the tariff has furnished less by almost thirty millions than it did last year, and the Internal Revenue Department shows a falling off of almost seventeen millions. Five millions more of the income of 1873 than of that of 1872 are, however, credited to miscellaneous sources.

☞ Mr. S. S. Blair, superintendent of the Baltimore Division of the Northern Central Railway, between Baltimore and Harrisburg, has been transferred to the Tyrone Division of the Pennsylvania Railroad, where he will be superintendent of about one hundred and seventy five miles of road, viz: Tyrone to Clearfield, Tyrone to Lock Haven, on the Philadelphia and Erie road, and Tyrone to Lewisburg, (about being completed,) on the Philadelphia and Erie road, six miles north of Sunbury. Mr. Blair has held his position on the Baltimore Division for over ten years. Mr. George C. Wilkins has been appointed to the position made vacant by Mr. Blair. He has been superintendent of the Tyrone Division for several years.

☞ The earnings of the Central Pacific Railroad for the month of September, 1873, were $1,892,125, against $1,254,688 in September, 1872, and $995,921 in September, 1871. For the first eight months of 1873 the earnings have been $10,183,178 against $9,307,441 for the first eight months of 1872, and $6,916,474 for the first eight months of 1871—an increase this year over 1872 of $875,734, and over 1871 of $3,266,704.

☞ The earnings of the Erie Railway Company for the week ending Sept. 30, 1873, were $432,800, and since July 1, $5,378,201—an increase over the corresponding period of the previous year fo $447,936.

☞ Mr. Robert V. Dohaney has been engaged by the Annapolis and Elkridge Railroad as Master of Machinery on the road.

☞ The Eastern Railroad of France owns 905 locomotives, 2,386 passenger carriages and 22,936 goods trucks and wagons of various kinds.

Imports of Dry Goods.

The imports of foreign dry goods at New York for the month of September, were :

ENTERED FOR CONSUMPTION.

	1872.	1873.
Manufactures of wool	$2,478,130	$2,870,605
" cotton	1,492,261	1,247,509
" silk	2,009,211	2,168,343
" flax	973,468	923,069
Miscellaneous dry goods	622,092	548,125
Total entered for consump.	$7,575,162	$7,757,651

WITHDRAWN FROM WAREHOUSE.

	1872.	1873.
Manufactures of wool	$3,251,322	$1,949,632

☞ The last stone of the International bridge across the Niagara river at Fort Erie, was laid on the 2d inst. The bridge is expected to be ready for the passage of trains on the 27th instant.

☞ The extent of new line opened in France from April 1, 1872, to March 31, 1873, was 323¾ miles. The aggregate length of line worked March 31, 1873, was 11,165 miles.

☞ At a meeting of the stockholders of the Toledo, Wabash and Western Railway, at Toledo, Ohio, on the 1st inst., the following gentlemen were elected directors: John F. Tracy, Sidney Dillon, Milton Courtright, John S. Casement, P. L. Cable, John Ross, J. D. Cox, A. J. Crawford, A. Schell, Kenyon Cox, William L. Scott, George Cecil, E. C Benedict, John R. Cecil, and S. W. Phelps. After the election the new board organized and elected ex-Secretary of the Interior J. D. Cox as president.

☞ The Lynchburg *Republican* learns that the track layers on the Lynchburg and Danville Railroad have reached Otter River, distant nineteen miles from Lynchburg. This stream will be crossed with a trestle bridge, the work on which will be urged with all possible expedition, the timbers being all ready to be placed in position.

Statement of the Public Debt of the United States October 1, 1873.

DEBT BEARING COIN INTEREST.

Interest paid by United States, $20,147,986 26; interest repaid by transportation of mails, &c., $4,422,111 38; balance of interest paid by United States, $16,025,874 88.

The foregoing is a correct statement of the public debt, as appears from the books and Treasurer's returns in the Department at the close of business, September 30, 1873.

WILLIAM A. RICHARDSON,
Secretary of the Treasury.

☞ The first rail was laid on the 7th inst. on the Rochester and State Line Railway from Rochester to Salamanca, and connecting the Atlantic and Great Western and the New York Central Roads thus forming a new and direct route between the East and West.

☞ The Westinghouse and Heberlein brakes are about to be submitted to careful trials on the Belgian State lines. Recent accidents have directed a large amount of attention in Belgium just now to the question of brakes.

☞ The Supreme Court of Illinois has decided that telegraph companies are bound to transmit messages correctly in the first instance, and that an additional charge for repeating, to insure correctness, is a fraud upon the public. A similar decision has been given in Ohio.

☞ A contract was executed on the 4th inst. for the leasing of the contemplated Lowell and Andover Railroad to the Boston and Maine R. R. Co. for 99 years, which ensures its construction, for which proposals will immediately be issued.

☞ A new iron bridge is to be built over Little river, between Middletown and Cromwell, (Conn.) at a cost of $4,000.

Steam on the Canals.

We believe the time is near at hand when the final trial is to be made of the numerous devices for more rapid transit on our canals.

As at present advised we don't think the prize offered by the State for the best method has been earned by anybody.

We understand the manipulators of the Baxter scheme are going to make another desperate effort to capture the award of $100,000.

Can anybody tell us what there is about the Baxter machine that entitles it to serious consideration?

In our opinion the time should be extended for further and more effectual competition.

And by the bye we call upon our friend, E. Myers, Esq., now sojourning in this city, to come forward and help us if possible in this emergency. If we are not mistaken, he stands at the top of the engineering profession in London, is perfectly familiar with all the European styles of Canal transit, and, "blue blooded Briton" though he be, surely will not feel himself above lending a hand toward solving this most difficult canal problem—and more especially as the little matter of £20,000, is to be the reward of the successful inventor.

New York, Oct. 5th, 1873.

To the Editors American R. R. Journal:

I am engaged in constructing a line of railroad in one of the Western States, something over two hundred miles in length, and am continually making purchases of various kinds of railroad supplies.

I have carefully looked over the columns of the Journal with a view of ascertaining the best kind of truck for freight and passenger cars, the most approved self-coupling device, and also the best and most effective car brake in use.

Seeing nothing of the kind advertised, I wish to inquire if you can furnish me the desired information respecting the articles named, and oblige

Truly Yours,

E. M.

The writer of the foregoing letter is a gentleman with whom we are personally well acquainted, and he is one of the most reliable, soundest business men in the country. Whatever kind of rail road supplies should be deemed best and accepted by him, would doubtless be adopted by some 6 or 8 other roads building or about commencing in his State. And here, again, is a most forcible proof of the great utility of advertising all such things in the columns of such journals as are read by all railroad people.

☞ At the annual meeting of the stockholders of the New York, Providence and Boston Railroad Company, held at Stonington, Conn., on the 30th ult., the report of the directors for the year ending Aug. 31, was submitted. It showed that the receipts for that period from the business of the road were $933,631, and the current expenses $550,311, making the net earnings $383,319. Dividends and interest to the amount of $272,825 were paid, leaving a surplus of $110,494. The general balance sheet, which includes bonds sold and new stock issued, shows a total of receipts of $1,202,985, and expenditures equalling the same, with the exception of $29,066 cash on hand. The business of the road shows a large increase over the year 1872.

Worcester County Railroad.

The third annual statement of the Worcester County, Maryland, Railroad Company (extension of the Salisbury and Berlin Railroad to Snow hill), has just been made public. The statement covers the operations of the road for ten months and twenty days, and shows the net earnings to have been $2,335 26⅔. The gross earnings were $10,029 40⅙, and the aggregate expenses $7,694 13½, of which $7,111 11⅔ were paid the Washington and Potomac Company for operating the road. Some idea of the value of the road may be inferred from the outlet which it has furnished for the products of the country through which it passes. There were shipped of grain 21,661 bushels; of lumber 1,505,200 feet; of berries 39,510 pounds; of oysters 18,262 bushels, and other things in like proportion. There are few of the old Peninsula Railroads which can show a better annual statement than this. When we remember that there are but three stations on the road the statement is surprising.

Illinois Central Railroad.

The statement of this Company for the month of September, 1873, is as follows:

LAND DEPARTMENT.

Acres Construction Lands Sold	2,633.44 for	$21,369 03
Acres Interest Fund Lands Sold	..... for	.....
Acres Free Lands Sold	120.00 for	1,080 00
Total sales during the m'th of September, 1873	2 753.44 for	$22,449 03
To which add Town Lot Sales	..... for	70 00
Total of all	2,753.44 for	$22 519 03
Cash collected in Sept., 1873		$45,958 49

ESTIMATED EARNINGS—TRAFFIC DEPARTMENT.

	In Illinois. 707 Miles.	In Iowa. 402 Miles.	Total. 1,109 Miles.
Freight	$426,702 00	$144,370 00	$571,072 00
Passengers	125,211 35	48 514 20	173,725 55
Mails	6,375 00	3,059 24	9,434 24
Other sources	119,625 00	2,555 76	122,180 76
Tot'l Sept. '73	$677,913 25	$198,499 20	$876,412 55
Total actual earn'gs, Sept., 1872	$578,489 24	$166,292 99	$744,782 23

☞ The Staunton (Va.) *Vindicator* gives the following as the present condition of the Valley Railroad: "The directors have resolved to build the line to Salem as they did the line from Harrisonburg—that is, the heavy work first and the light work last—and with this view the light parts of the work are not put under working orders, and contractors for them cannot go on. It is stated that the company favorably considers the idea of building the road twenty-four miles to Fairfield, and putting it in running order right away. This would involve the expenditure of $1,000,000 in this section. It is hardly likely any important move will be made, however, until the financial crisis is over. The company propose to adhere to their original intention of finishing the whole road to Salem in three years."

☞ The tax of three Prussian pennies, hitherto levied upon every newspaper sent from this country to Germany, being in direct contravention of the postal treaty between the two countries, is no longer to be enforced.

Preservation of Sheet Iron.

The direction of the Government Railroads of the Netherlands has published the results of some experiments in regard to the preservation of sheet iron used in railroad bridges. From thirty-two sheets half were cleaned by immersion for twenty-four hours in diluted hydrochloric acid; they were then neutralised with milk of lime, washed with hot water, and while warm dried and rubbed with oil. The other half was only cleaned mechanically by scratching and brushing. Four of each kind were then equally painted with red lead, and with two kinds of a red paint of oxide of iron, and with coal tar. The plates were then exposed to the weather, and examined after three years. The result was: (1) That the red lead had kept perfectly on both kinds of plates, so that it was impossible to say if the chemical cleansing was of any use. (2) That one kind of iron oxide red paint gave better results on the chemically treated plate than on the other; in fact, a result equal to that of the plate painted with red lead, while the other kind of iron oxide red gave not very good results on the plates when only scratched and brushed. (3) That the coal tar was considerably worse than the paint, and had even entirely disappeared from those iron sheets which had not been treated chemically, but only cleaned by brushing.—*Engineer.*

☞ During the nine months since the opening of the Chesapeake and Ohio Railroad there have been opened on its line seventeen coal mines, seven iron ore beds, and twelve iron furnaces. The furnaces already built, or to be early completed, represent an annual production of about 120,000 tons of pig iron, and to convert the ore into rails or other manufactured iron will be require a consumption of nearly 1,000,000 tons of coal.

☞ The change of gauge on the Grand Trunk Railway of Canada was completed on the 4th inst. over the entire line, and the trains resumed their regular trips on the 6th. The International bridge at Buffalo will be completed on the 27th, after which trains can pass between Canada and the Eastern and Western States.

FOR SALE.

TWO (2) NEW PASSENGER CARS—47 fee long—low price—can be seen at

Philadelphia Car Works.
31st and Chestnut St.,
PHILADELPHIA.

NICKEL
AND
SILVER PLATING,
Bronzing and Coppering

35tf 5 and 7 DEY STREET NEW YORK

LANSDELL'S

Patent Portable Railway Syphon.

The Portable is invaluable on a freight or construction train, being used to take water at points where there are no water stations. With it water can be taken from any point within one hundred feet of the track where there is water six inches or more in depth. The valve C is tapped into the locomotive boiler; steam is let on through the hose B; water is drawn through the orifices D D, and forced through the hose E into the tender, filling any tender with warm water in from six to twelve minutes.

Lansdell's Patent Steam Syphons, Double Suction, adopted by the United States Board of Supervisors, and approved by the Secretary of the Treasury for use on Steamboats.

For Price and particulars, apply to the General Agents of the Steam Water Station Company,

LENG & OGDEN,

IRON AND STEEL DEALERS & IMPORTERS,

WELLAND CANAL
ENLARGEMENT.

Notice to Contractors.

SEALED TENDERS, Addressed to the undersigned, and endorsed "Tender for Welland Canal," will be received at this office until noon of

Saturday, the Eighteenth Day of October Next,

For the construction of fourteen Locks and fourteen regulating Weirs, a number of Bridge Abutments and Piers—the excavation of the Lock and Weir Pits—the intervening Reaches, Face ways, &c., on the new portion of the WELLAND CANAL, between Thorold and Port Dalhousie.

The work will be let in sections, six of which, numbered respectively 2, 3, 4, 5, 6 and 7, are situated between Port Dalhousie and St. Catherines Cemetery, and three (numbered 12, 13 and 14) extend from the northern side of the Great Western Railway to near Brown's Cement Kilns.

Tenders will also be received for the enlargement and deepening of the prism of the present Canal between Port Robinson and the Aqueduct at Welland; work to be let in sections, each about a mile in length.

Tenders are also invited for the completion of the deepening and enlargement of the Harbor at Port Colborne.

Maps of the several localities, together with Plans and Specifications of the work, can be seen at this office, on and after THURSDAY, the TWENTY FIFTH day of SEPTEMBER instant, where printed forms of Tender will be furnished. A like class of information relative to the works north of Thorold, may be obtained at the Resident Engineer's Office, Thorold; and for works at and above Port Robinson, Plans, &c., may be seen at the Resident Engineer's Office, Welland.

All Tenders must be made on the printed forms supplied, and to each must be attached the actual signatures of two responsible and solvent persons, residents of the Dominion, willing to become sureties for the due fulfilment of the contract.

This Department does not, however, bind itself to accept the lowest or any Tender.

By order,

F. BRAUN.
Secretary.

Department of Public Works

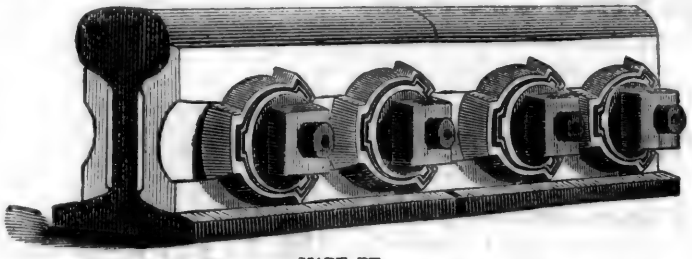
THE LOCK-NUT & BOLT COMPANY OF NEW YORK,

No. 61 Broadway, New York.

Manufacturers of all kinds of **BOLTS** for FISH-BARS, BRIDGES, CARS, MACHINERY, &c., with the "CUMMING NUT-LOCK," the only method of locking a nut to the bolt.

PATENTED June 16, 1868.

IMPROVED August 23, 1870.



Unequalled for Cheapness, Simplicity and Effectiveness.

DESCRIPTION.—A pointed copper key is placed in a groove cut in the threaded part of the bolt, *over which* the nut is screwed to its position, cutting its own thread in the copper, thereby taking up all the slack between the bolt and the nut. By riveting up against the face of the nut the projecting portion of the copper key, the nut is firmly locked in its position, but can be readily adjusted or removed with a wrench without injury to either bolt or nut.

Severely tested for over *four years*, they have *never failed*, and are *now in use on over fifty Railroads*, giving perfect satisfaction. We solicit a trial *anywhere*.

Licenses Granted to R. R. Companies, Car Builders and others.

PRATT'S PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,

IRON AND STEEL MANUFACTURERS,

No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

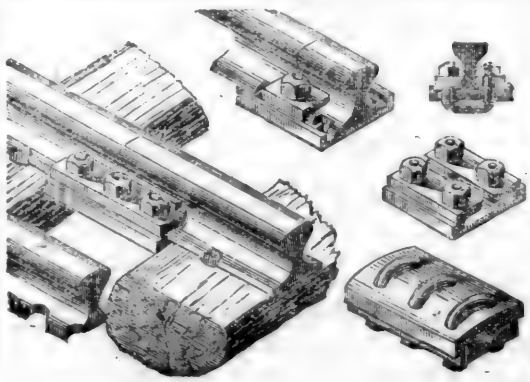
The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.



That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

FISHER'S PATENT

Wrought Iron

RAIL JOINTS,

MADE BY

FISHER & NORRIS,

TRENTON, N. J.

The Superiority of these Joints has been proved by eight years' use on different Roads.

Incombustible Building Material.

At last we have it. If the material and the process we are about to describe briefly, will not afford complete guarantee against the ravages of fire, then we utterly despair of ever finding anything that will protect us against that demon of destruction.

In our issue of the 27th ult., we were led to inquire if there was not some method whereby the roofs especially of the more exposed buildings, such as railroad sheds, depots and the like, might be more effectually protected from the constant danger to which they are now necessarily exposed. That short paragraph has elicited information on the above subject of the highest importance and which we deem it our duty to lay before the public without delay and in the fullest manner that our columns will admit.

Experience has shown that marble, granite and other forms of building material, disentegrate and succumb in the presence of great heat; and brick, though considered superior to all other material commonly used in its resistance to fire, yet like them it proves no adequate safeguard during such terrible conflagrations as those of Chicago and Boston.

But there is a material that absolutely laughs at fire. Asbestos is the article referred to, and exists in great quantity in almost every State of the Union. It is a sort of semi-fibrous, mineral-like substance, found in the earth, appearing sometimes to be almost a mineral, then again it has a soft, silky texture; but in whatever form it comes, it invariably presents the same dogged, obstinate resistance to fire. It is not only absolutely incombustible, but is entirely water and weather proof, as well as the most perfect non-conductor of heat.

Any kind of structure composed in part or whole of iron, if properly and even cheaply coated with this substance, may bid defiance to the fiercest fire—a most valuable auxiliary to our iron manufacturers. It is also specially adapted as a weather coating for corrugated iron.

Asbestos, or Amianthus, for they are really one and the same substance, was well known to the ancients in the time of the Pharaohs, and how much further back towards Adam's time, we cannot trace; but that in those early days it was put to a variety of valuable uses we do know. In later ages, the means of utilizing this article have been lost or forgotten.

It seems to have been reserved to Gen. Joseph J. Bartlett, of this city, to have discovered or worked out again the means for making Asbestos useful in a thousand ways to mankind.

In fact it seems to us that Gen. Bartlett has really been instrumental in recovering one of the long lost arts—an art, too, destined we believe, by his researches and developing hand, to prove of incalculable benefit to present and future generations.

But let us hasten briefly to name a few of the innumerable uses to which this most valuable invention is adapted.

Provention being always preferable to cure, as an auxiliary to fight the fire fiend, it is worth more than all the Fire Departments in the world. Indeed we are fully satisfied, that any house of however combustible material, if reasonably painted or coated over with this substance, would not be burnt down if a fire were kindled up all around it and in every room. It is our firm conviction, based upon observation and experiment with this substance, that had any wooden building suitably coated and sheathed with it, been placed in the hotest centre of the great Chicago conflagration, it would have come out unscathed, and stood there alone, when all others had utterly melted away.

We cannot afford space to enumerate all the uses of this great improvement; but in addition to the protection of buildings, the material itself, being both liquid and plastic may be moulded into any form the fancy dictates, and used for ornamental and decorative purposes wherever required. Any house at trifling cost, may have one or more rooms or closets made absolutely proof against fire for the safe keeping of valuables, &c.

Still another most valuable element is its remarkable facility for the reception and retention of all kinds of colors. In its limpid form, therefore, it may be used externally or internally as a paint, and thus secure every known color and shade, from the deepest navy blue, to the most delicate tints of orange or pink.

In slabs, blocks and even in thick coatings this material is susceptible of a very high polish, and hence is invaluable for statuary, tables, stands, panels, mantels and the like.

In roofing, it may be applied in immense sheets without seam or joint; and being impervious to the weather, and perfectly insensible to atmospheric changes, contraction and expansion, if any, are quite imperceptible.

Whether used in a plastic form, in coating, &c., or as paint with a brush, its power of adhesion is really wonderful, and all the same, whether laid upon wood or iron. Though temperature does not affect this substance, still there is a slight degree of natural elasticity about it, whereby it readily accommodates itself to the warping of wood or any degree of expansion, &c., of the iron or other material on which it may be laid.

In regard to the tenacity with which it adheres, we have ourselves tried to peel or chip off some of the coating shown us on a piece of sheet iron, but were unable to make any impression on the material whatever.

We also witnessed the following most severe test. A three-quarter inch pine board was produced on which was a coating of Asbestos about

one-eighth of an inch thick. Being laid on the floor in such a manner as to give opportunity for deflection, a gentleman weighing about 180 pounds jumped around on it in a very rough manner. A close examination showed only slight scratches from the heavy boot nails; no crushing, cracking or fracture whatever to be seen.

For interior decoration of all places where perfect immunity from fire is the great desideratum, this is just the thing; and in steamships and steamboats it is equally useful, and can be made extremely ornamental. It adjusts itself as readily to the shrinkage of wood as to the expansion of metals, and can be applied while the vessels are in service, and without the least interference with their ordinary business.

We venture the prediction, that ere long this article will be turned to the manufacture of the various kinds of fancy ware that are now made of lava, china, porcelain, &c. Indeed we have already seen a box or jewel case so made, and which might be placed in a heated furnace; and such is the heat-repelling power of Asbestos, that the delicate works of a watch or jewels placed therein, receive no injury.

In our judgment, this invention of Gen. Bartlett is destined to revolutionize several of the trades, and notably the safe and vault manufacturing business. And we might add, a strange thing to our mind is, the fact, that no one of our safe makers, has yet had the shrewdness to secure the right of using this material in the composition of his safes; for it is well known they would thus be made absolutely fire-proof, under any amount of the hotest roasting. With the Asbestos prepared under this process and suitably worked into these structures, entire immunity from fire would be reached, and absolute perfection in safe making attained.

This Invention of Gen. Bartlett, duly secured by Letters Patent, is not of course for the discovery of Asbestos, but for the means and processes of preparing, working and applying it.

A company has been organized under the name and style of "The Indestructible Building Material Company" of New York, Gen. Jos. J. Bartlett, President, office at 194 Broadway, and already business is offering, almost to the extent of their working capacity.

In a word, we look upon the utilization of this hitherto worthless substance, to the thousand and one purposes for which it is adapted, as one of the leading improvements of the day; and in point of importance, well deserves to rank in the same line of invention as the steam engine, the electric telegraph and the sewing machine.

Western Union Telegraph Co.

At the annual meeting of the stockholders of this company, held on the 8th inst., the following gentlemen were elected directors: Wm. Orton, James H. Banker, Alonzo B. Cornell, Harrison Durkee, Norvin Green, Joseph Harker, Edwin D. Morgan, Augustus Schell, W. K. Thorne, C. Vanderbilt, Frank Work, Chester W. Chapin, Ezra Cornell, Cyrus W. Field, Wilson G. Hunt, David Jones, C. Livingston, Geo. H. Mumford, O. H. Palmer, Geo. M. Pullman, E. S. Sanford, Hiram Sibley, John Steward, Moses Taylor, W. H. Vanderbilt, W. R. Vermilye, E. B. Wesley, Stillman Witt, and E. D. Worcester. At a subsequent meeting of the directors, the following officers were chosen: President, William Orton; vice-presidents, A. B. Cornell, Aug. Schell, Norvin Green, Geo. H. Mumford and Harrison Durkee; executive committee, William Orton, A. B. Cornell, Jas. H. Banker, Norvin Green, Harrison Durkee, Jos. Harker, Edwin D. Morgan, Aug. Schell, W. K. Thorne, C. Vanderbilt and Frank Work.

The report of the President for the fiscal year ending June 30, 1873, was presented. From this we learn that the amount of capital stock on that day was $41,073,410, of which there was outstanding $33,778,175 and owned by the company $7,295,235. The debt of the company on that day was $6,038,410, of which there was due on October 1, 1873, for American Telegraph Company bonds, $89,500; in November, 1875, for Western Union Telegraph currency bonds, $4,448,900; in November 1902, for Western Union Telegraph gold bonds, $1,500,000.

The gross receipts of the company for the year, from all sources were $9,338,018 51; the gross expenses, $6,575,055 82; and the net earnings, $2,757,962 69.

This amount has been applied as follows:

Construction and purchase of new lines	$1,242,205 97
Interest on bonds	317,793 00
Real estate	62,214 40
Purchase of sundry stocks of Telegraph Companies in Western Union Company's system	41,577 69
Paid for $50,000 Western Electric Manufacturing Company's stock	39,000 00
Patents (on account of Stearns Duplex)	19,258 00
Miscellaneous	401 50
Total	$1,722,450 56
The balance carried to the credit of income account	1,035,512 13
Total	$2,757,962 69

On the 1st of July, 1872, the company were operating 62,032 miles of line and 137,190 miles of wire, using 5,237 offices. A year later, the lines in operation were 65,757, the miles of wire 154,471, and the offices used, 5,740. The increase during the year has been 3,725 miles of line, 17,281 miles of wire, and 503 offices. The number of messages sent during the year ending June 30, 1872, were 12,444,499, and for the year ending June 30, 1873, 14,456,832, an increase of 2,012,333. The average tolls collected upon each message for the year were 61 cents, the average cost of transmission 42 cents, and the average profit per message 19 cents. During the past year $706,789 58 was expended for repairs of the line, and $632,758 for reconstruction.

The net profits of the company for seven years from July 1, 1866, to June 30, 1873, have been $20,312,618 81. Of this sum $4,857,239 34 has been distributed in dividends to stockholders, and $2,216,194 98 was paid for interest on the company's bonds. The Western Union has purchased during the past year the control of the International Ocean Telegraph Company, whose lines extend from Lake City, Florida, to Havana, Cuba, at a cost of $1,038,400. They have also secured a majority of the stock of the Pacific and Atlantic Telegraph Company. They are now operating more than 150,000 miles of wire, and during the past two years have been extending at the rate of 20,000 miles of wire per annum. They have expended up to July last on the new building at the corner of Broadway and Dey streets the sum of $1,224,981 70, and it is expected that it will be finished early next spring.

For the construction, reconstruction and repair of lines there were used 141,498 poles, 261,715 cross arms, 1,033,270 insulators, and 1,103,265 pins and brackets. There were in the employ of the company on the 30th of June, 1873, 9,196 persons. Of these four were general superintendents of divisions, 29 superintendents of districts, 5,514 managers and operators, 1,830 messengers, 661 clerks, 539 foremen of construction and repairmen, 116 mechanics in factories, 84 batterymen and 275 miscellaneous. There were in use on the lines of the company at that date 6,250 sets of instruments for reading by sound, 1,373 recording instruments, 8,601 relay magnets, 8,905 transmitting keys, 227 repeaters, 15 printing instruments, 94 sets of duplex instruments, 2,662 switch boards, 3,472 cut-offs, 3,029 lightning arresters, 21,777 cups of main battery, and 11,717 cups of local battery. The cost of new instruments and apparatus supplied during the year was $140,877 52, and of battery material and supplies, $146,793 68.

Chicago and Northwestern Railway.

The earnings of this road for the years ending May 31, 1872 and 1873, were as follows:

	1871-'72.	1872-'73.
From passengers	$3,260,654 06	$3,509,702 28
" freight	7,521,275 09	8,614,260 25

From this amount, dividends of 3½ per cent were declared on both the common and preferred stocks in December last, and a dividend of 3½ per cent also declared on the preferred stock for the six months ending May 31, 1873, amounting in all to the sum of..		2,019,640 00
Leaving a surplus for the year of		$164,273 53
To which add the balance standing to credit of income account on the 31st of May, 1872..		1,465,694 31
Leaving balance to credit of income account May 31, 1873.....		$1,629,967 84

It will be seen that the gross earnings were $12,786,606 75, against $11,402,161 44 the previous year—a gain of $1,384,445 31, or 11.70 per cent. The operating expenses were $7,776,168 18, equal to 61 05 per cent of the gross earnings, against 56 68 per cent in the previous year; and including increased taxes, and renewals on account of the Chicago fire, they were $8,178,236 71, or 64.21 per cent, against 59.72 per cent for the preceding year. The net earnings after deducting all charges against the property for operating expenses, taxes, renewals, rent of Iowa leased roads, sinking funds, dividends on Chicago and Milwaukee Railway stock, and interest on the bonded debt, amount to $2,183,913 53 for the year, and are $434,410 25 less than the amount for the previous year. The difference, resolved into specific items, shows that $284,890 46 accrued from interest on increased bonded debt; $48,000 on account of sinking funds; $71,812 67 on account of rentals for increased business on Iowa leased roads; $941 62 on account of Chicago and Milwaukee stock dividends, and the balance, $33 765 50, is the excess of gain of expenses over the gain of earnings for the year.

The item of interest paid on increased bonded debt is disproportionate to the revenue derived from the new miles of road added during the year from the unfinished works of the company, as these works, when completed as main lines, will increase their traffic and greatly augment the earnings of the future.

The Common stock has been increased $100, for stock issued in exchange of Beloit and Madison Railroad stock, and $182,000 issued in exchange for Peninsula Railroad bonds converted, making $182,000 issued, (less $60 of Common stock scrip, canceled,) or a total increase of $182,040 of Common stock.

The preferred stock has been increased $182,000 for Peninsula bonds converted, and $234,400 in exchange for the same amount of Chicago and Milwaukee Railway stock. Total increase, $416,400 of Preferred stock.

During the year the amount of $419,000 of Consolidated Sinking Fund Currency bonds, and $9,000 of Chicago and Milwaukee Railway Company Consolidated bonds have been issued, in exchange for the same amount of Appleton Extension bonds, Green Bay Extension bonds, Funded Coupon bonds, Galena and Chicago, Elgin and State Line, Peninsula, Beloit and Madison, bonds and Old Chicago and Milwaukee and Milwaukee and Chicago Railroad bonds taken up and canceled, during the same period, (excepting a $500 General First Mortgage bond, which was canceled in 1871,) making the total amount of Currency bonds outstanding at the close of the year the same as at its beginning, save the increase of $500, for the bond canceled in 1871, for which no issue had before been made.

The total amount of Currency bonds outstanding at the end of the year, including Chicago and Milwaukee and Beloit and Madison bonds, was $14,624 500; the description of which will be found in General Balance Sheet.

The issue of Gold bonds, stated in the last Annual Report, for the purpose of constructing the Extension from Fort Howard to Escanaba, 114 miles, and the Madison Extension, about 129 miles, amounted to,.....		$5,850,000 00

The extent of road in operation on the 31st of May, 1872, (not including the lines of the Iowa Midland, the Winona and St. Peter, and the La Crosse, Trempeleau and Prescott roads, whose operations are not embraced in the earnings and expenses of the Chicago and North Western,) was 1,314.10 miles; the number of miles in operation on the 31st of May, 1873, was 1,459.52, being an increase of 145.42 miles during the last year.

This increase is composed of 20.42 miles of extensions and short branches, made necessary to accommodate new mines and increased production of iron ore on the Peninsula Division; of 64.6 miles of new road from Escanaba to Menominee, and 0.3 of a mile from Menominee to Marinette, which forms the last link in the connection of our line of railway between Chicago and Negaunee; of 43.6 miles of the Madison Extension, put into operation as the line progressed during the year; of 8½ miles constructed between Tipton and Stanwood, connecting with the Iowa Division; of 3 miles of the extension of the St. Charles Branch to the stone quarries in the town of Batavia, on the Galena Division, and of 5 miles built to connect the Wisconsin and Galena Division tracks just outside of the city limits, on the west of the City of Chicago—in all, 145.42 miles of new road, of which 108.5 miles are on the main lines, and 36.92 miles are distributed on the various extensions and branches, for the better development and working of the main lines.

A considerable portion of the 145.42 miles of increased road was not put to use till late in the year, and including the branches to the mines, and the Chicago Cut-off track, whose operations gave additional facilities for working the road rather than contributed to its earnings, the average number of miles in operation may be stated at 1,382.18, or an actual increase of 68.08 miles for the whole fiscal year.

Of the above mileage there were, on the

Wisconsin Division	....	364.27 miles.
Galena	"	305.11 "
Iowa	"	359.39 "
Madison	"	145.75 "
Peninsula	"	122.66 "
Milwaukee	"	85.00 "
Total		1,382.18 miles.

Exclusive of construction expenditures on account of other railways which are owned and controlled by this company, the amounts expended for construction purposes and for the equipment of the Chicago and North Western during the past year, have been as follows:

For the extension from Fort Howard to Escanaba, (now in operation,) including new ore dock at Escanaba, $1,555,254 24; for extensions to iron ore mines on Peninsula Division, $149,861 84; for extension to Breen Mine, $10,472 64; for changing main line, Svene to Madison, $20,830 96; for account of the Madison Extension, (now nearly completed,) $1,554,644 48; for St. Charles Branch, $1,042 75; for Batavia Branch $66,764 94; for right of way and depot grounds, $3,286 94; for construction of new buildings, $54,867 85; for construction telegraph, $84 75; for renewals with steel rails, being the difference in cost between iron and steel, to replace the former, $48,087 92; for new side tracks, $142,225 58; for balance due on Bain rolls for repairing rails $31,397 75; for new Cut off Branch Road, near Chicago, (completed,) $162,383 19; for Clark Street Viaduct, Chicago, $16,458 55; for Canal Street Viaduct, Chicago, 3,675 17, (less $13,603 40, received from other companies on account of tracks and viaducts in Chicago;) for account new shop grounds, new engine house and new repair shops near Chicago, 152,134 65; for new building for general offices in Chicago, $13,500; for discount on securities provided for construction purposes, $472,795 92; for new engines, $416,742 57; for new iron ore cars, $329,592 25; for new passenger, baggage, mail, freight and working cars and car equipment, $690,929 14; making the amount of $4,446,116 72 expended for construction, and $1,437,263 96 for equipment. Total, $5,883,380 68.

To provide for these outlays, and to complete and equip the railroads connected with our system and belonging to the company, mention of which will be made in subsequent pages of this report, and to put the property in a condition of highest efficiency for economical and successful operation—now made imperative in view of the largely increased traffic on its older lines—by the substitution of steel rails for iron, and by constructing iron and stone bridges as fast as such renewals can properly be made; and to provide

new machine shops, of sufficient capacity to enable the company to combine and consolidate its present old, inadequate, outgrown and expensive shops at Chicago, and to supply requisite housing for its largely increased locomotive equipment, and for general improvements of this character, the company concluded, in November last, to create a new mortgage on all its railroads, equipment, franchises, leaseholds, land grant lands, and all other property—subject to existing liens—of sufficient amount not only to provide means for the above purposes, but also to embrace provisions for the ultimate consolidation of its entire bonded debt, and the bonded debt of the other railroads owned and controlled by this company, now existing under separate organizations, whenever the said railroads shall become consolidated with the Chicago and North Western Railway Company. To this end a new mortgage was created, with the Union Trust Company of New York as trustee, authorizing the issue of $48,000,000 of seven per cent. Consolidated Gold bonds, running thirty years from the first day of December, 1872, in registered coupon form, at the option of the purchaser, with interest payable in gold at the office of the company in the city of New York, on the first of June and December in each year, and a sinking fund after the first year established, of one per cent on the amount outstanding in each and every year thereafter. Of this issue, the amount of $18,749,500 of the bonds is reserved, and can only be issued at the option of the company, for and in place of the like amount of other issues of bonds which constituted at that date all of the outstanding bonded debt of this company, and of the companies embraced in the consolidation, as specified in said mortgage; and there is also reserved in said mortgage the further amount of $16,599,500 of bonds to provide, in like manner, for the retirement and exchange of the bonds of other companies, for which this company is liable, by ownership and control of the roads, viz.: of $1,724,500 of Chicago and Milwaukee Railroad line currency bonds; of $1,350,000 of the bonds of the Iowa Midland Railroad Company; $1,000,000 bonds of the La Crosse, Trempeleau and Prescott Railroad Company; $9,025,000 of bonds of the Winona and St. Peter Railroad Company, and $3,500,000 of the bonds of North Western Union Railway Company, upon consolidation of these companies respectively with the Chicago and North Western Railway Company. All of which reservations are specifically set forth in the mortgage. The total amount so to be reserved is $35,349,000, and the residue, to wit, $12,651,000, is authorized to be issued for uses of the company. As before stated in the description of the bonded debt., $4,534,000 of these bonds were sold during the last fiscal year.

The important work of construction in which this company is interested are hapidly approaching completion, and by the first of October next, or sooner, the entire line of the Madison Extension, and of the North Western Union Railway, between Milwaukee and Fond du Lac, and of the Winona and St. Peter Railroad Company, will be in successful operation. Trains have been running regularly over the extension, between Fort Howard and Escanaba, since last December, and the result of the traffic fully justifies the anticipations of that enterprise; the steamboats, which before were necessary to connect the line between these points by navigation of Green Bay, have since been sold.

Besides these outlays for the Chicago and North Western, the further sum of $4,578,773 23 has been expended during the year for construction on other lines, which are embraced in the system of roads operated by this company, and included in the provisions of the general consolidated mortgage last created, to wit: For construction of the extension of the Winona and St. Peter Railroad to the Minnesota State Line, $1,979,930 20; for the same in Dakota, $193,992 01; for the Mankato Branch, $4,812 16; for account of the Mississippi River Bridge at Winona, $3,291 97; for the La Crosse, Trempeleau and Prescott Railway, $7,979 69; for the Stanwood and Tipton Branch, $144,482 47; for the State Line and Union Road to Geneva Lake, $2,495 11; for the Iowa Midland, $28,509 25, and on account of the North Western Union Railway, between Milwaukee and Fond du Lac, including extensive and valuable depot grounds in Milwaukee, $2,213,280 47.

The aggregate sum expended by all these corporations during the year, for construction and equipment purposes, amounts to $10,462,154 01, apportioned as follows:

Chicago and North Western Co.:		
Construction	$4,446,116 72	
Equipment	1,437,263 96	
		$5,883,380 68
Winona, and St. Peter R. R. Co.	2,178 922 21	
Winona, Mankota and New Ulm Co.	4,812 16	
La Crosse, Trempeleau and Prescott R. R. Co	11,271 66	
Stanwood and Tipton Co	144 482 47	
Iowa Midland R. R. Co	28,509 25	
State Line and Union R. R. Co	2,495 11	
North Western Union Railway	2,213,280 47	

On some accounts, the last year may be regarded as exceptional to any that has preceded or that will follow it, in completing or bringing to an approximate close many large an important works of construction that could not be postponed without loss, especially in respect to the land grant roads.

The total quantity of land secured to the entire line north of Fort Howard, by completion of the extension of last year, is computed at a little more than 1,000,000 acres. Many of these lands are well timbered, and it is not unreasonable to suppose that some may contain valuable deposits of iron ore. Steps are being taken to examine and ascertain their value, which will constantly appreciate and add to the worth of the company's property.

Various improvements on all the lines of the company, and a further increase of equipment, which was indispensable to the business, have been supplied, and are mentioned in the general manager's report. Ample grounds, lying just west of Chicago limits, have been acquired for new engine house, machine and car shops, and buildings for a large part of these works are far advanced.

Of the lines under construction, owned by this company, the Winona and St. Peter was a land grant road, and the time for its completion expired on the 3d of March last. This road would have been finished last fall, but for the early winter which set in in November, and made further progress impossible. An extension of six months' time was granted by Congress, and the line will be fully completed within that period. The quantity of land which will be obtained for the extensions made since the purchase of the road in 1367, is estimated at upwards of 1,200,000 acres. The land is of the best quality to be found in either Minnesota or Dakota, and with great quantities of Government land on the alternate sections, now for the first time opened up to settlement, will attract early occupation and improvement. It will be the policy of the company to encourage actual settlers, and to build up traffic for the railroad, by the sale of lands at low prices, and minimum rates for transportation.

The only other work of large proportions which had been undertaken in the interests of this company, was the Fond du Lac Division of the North Western Union Railway. This line, of 62.7 miles, was put under contract, from Milwaukee to Fond du Lac, last summer, is nearly completed, and will be in readiness for the fall traffic.

The necessity for this line to protect our business north of Fond du Lac, from the effect of the competition of new roads on shorter lines to Milwaukee and Chicago, was none to soon seen and provided for. With this connection, a new route for all that region is opened to Milwaukee, a fine local business insured, and by the use of this line, and of our Chicago and Milwaukee road, a shorter route by at least 29 miles is made for all the Chicago business.

The original conception of the North Western Union Railway to provide this line and the branch between Milwaukee and Lodi, has only been partly realized.

Great encouragement was had from some of the most substantial citizens in active business in Milwaukee, that material aid would be gladly rendered to put the enterprise on its feet, but subsequent experience proved the error of this view, and that portion of the road extending to Fond du Lac has been built at great expense for necessary depot grounds, and right of way in Milwaukee, and at a cost of over $2,200,000, without equipment. These enormous outlays, except in the most imperative cases for the protection of the property, cannot be afforded, and however disappointed the company may be in not bringing its Madison Extension line, and the La Crosse, Trempeleau and Prescott, and Winona and St. Peter roads, with their valuable trade and products, in direct communication with Milwaukee by the Lodi line, it has saved the expenditure of its construction, at a time when the importance of other enterprises demanded the best efforts of the company.

The earnings and expenses of the several roads owned by this company, whose business is not included in the earnings and expenses of the Chicago and North Western Railway Company, are as follows, for the year ending May 31, 1873:

Winona and St. Peter	$718,924 98
La Crosse, Trempeleau and Prescott	230,551 19
Winona, Mankato and New Ulm	4,690 65
Iowa Midland	84,781 16
	$1,038,947 98
Their operating expenses and taxes were	$748,842 55
Their interest on bonds	605,392 46
	$1,354,235 01

showing a deficiency of $315,287 03 in the operating of these roads for the year.

The earnings of the Winona and St. Peter give no fair criterion of the results which may be expected when the whole of that road shall be finished, and connected with our main lines, by the completion of the Madison Extension. Its business is now rapidly increasing, the month of June, since the close of the last fiscal year, showing gross earnings of $117,700, against $63,400 for the same month in 1872. A large increase is anticipated for the entire year.

The La Crosse, Trempeleau and Prescott is self-sustaining, and affords a margin of profit for repayment of the advances made to it by this company. The Winona, Mankato and New Ulm is a short branch to Mankato, whose business can never be very remunerative in competition with other lines at Mankato; but the traffic it contributes as a feeder to the Winona and St. Peter, is of more account than its own local earnings.

The Iowa Midland has not proved profitable as a local line, and the benefits it confers as a feeder to the Fulton Air Line at Clinton, can only be estimated by the increase of traffic which it furnishes to and from Chicago on the Galena Division. Full balance sheets of all these roads, as combined in their accounts with the Chicago and North Western, are appended in the last pages of this report. By reference thereto, it will be seen that in case the entire deficiency which has ever accrued in operating these roads, shall be taken from the balance of income account belonging to the Chicago and North Western Company—which stood at $1,629,967 84 at the close of the last fiscal year—there will still remain a clear balance of income, over and above the total deficiencies of all the combined roads, of $764,264 91, on the 31st of May last.

It is believed that the time is not far off when these roads, taken together, will prove self-sustaining and valuable feeders to our trunk lines, and become profitable in their net results, aside from the value of the lands which, by the construction of the Winona and St. Peter road, are secured to that company.

A contract has been entered into with the Green

Bay and Lake Pepin Railway Company, whose road extends from Green Bay, west, about 200 miles, entirely across the State of Wisconsin, for the use of a portion of the La Crosse, Trempelean and Prescott Railway and the Mississippi River Bridge, for the western terminus of that road to reach the city of Winona. This arrangement will bring the large lumber regions traversed by the Green Bay and Lake Pepin Road in easy communication with the prairies of Minnesota and Dakota, and will furnish to the farmer a choice of markets for his grain at either of the three principal grain ports of Lake Michigan—Chicago, Milwaukee or Green Bay—by the most direct and shortest routes of transportation.

The general condition of the entire property has been improved by the addition of facilities afforded by new construction and equipment, and by the renewals and repairs put upon the road during the last year. The greatest economy of operations is, however, attainable only by the substitution of steel rails on all our main lines, where the traffic is heavy, and where the destruction of iron reaches its maximum at great cost to the company. The first important step has been taken, and ten thousand tons of steel rails have been ordered, which will be laid down as fast as they can be delivered within the next ensuing few months. Constant progress must be made in this direction, until the entire track shall be renewed with steel. This, with sufficient equipment, will constitute the chief want of the company hereafter for the movement of the large traffic which will press upon the road, when all its three trunk lines shall become connected and continuous as great thoroughfares of commerce.

The company had on the 31st of May last 219 first-class, 29 second class, and 53 switching locomotives; total, 301. Of these 159 are wood burners and 142 coal burners. The car equipment consists of 131 first-class and 27 second-class passenger cars, 4 business, 125 caboose and way, 65 baggage and express, 15 mail, 18 boarding, 4,151 box, 1,009 platform, 386 stock, 25 dump, 1,955 iron ore, and 11 wrecking, etc., cars.

The number of passengers carried during the year was 2,479,202; do. carried one mile, 111,071,927. Number of tons of freight carried, 2,958,390; do. carried one mile, 366,475,480. Earnings per passenger, $1.41; earnings per ton $2.91. Earnings per passenger per mile, 3.16 cents; earnings per ton per mile, 2.35 cents.

GENERAL BALANCE SHEET, May 31, 1873.

Old construction:		
Cost of road and property in accordance with terms of consolidation, to May 31, 1872		$39,976,662 62
For purchase of stock of the Beloit and Madison R. R. Co. during the year ending May 31, 1873		100 00
For purchase of stock of the Chicago and Milwaukee Railway Co. during the year ending May 31, 1873		2,500 00
		$39,979,262 62

Directors.—A. G. Dulman, Geo. S. Scott, M. L. Sykes, Jr., Charles R. Marvin, Harvey Kennedy, A. B. Baylis, David Dows, R. P. Flower, Francis H. Tows, New York; Wm. L. Scott, Milton Courtright, Erie; Albert Keep, John F. Tracy, Henry H. Porter, Wm. H. Ferry, Chicago; B. F. Allen, Des Moines, Iowa; J. L. Ten Have, Frzn, Amsterdam, Holland.

Asst. Secretary and Treasurer.—S. O. HOWE.

General Manager.—JAMES H. HOWE.

Gen'l Superintendent.—MARVIN HUGHITT.

☞ By the mutual consent of all parties interested, Mr. Lewis Rice of Boston and William J. Harrison of Alabama have resigned their position as receivers of the Alabama and Chattanooga Railroad, to be succeeded by Mr. A. Murdock, president of the Mobile and Ohio Railroad Company, and Mr. J. Foster Elliott of the banking house of Duncan, Sherman & Co. of New York. This arrangement secures to the road important connections with prominent southern railroads, which will greatly add to its passenger and freight business, and also places its financial matters on a basis that will compare favorably with the first-class railroads of this country.

Northern Pacific Railroad.

A statement by Mr. A. B. Nettleton, trustees' agent of the Northern Pacific Railroad, dated at Philadelphia, on the 8th instant, undertakes to give a definite account of the present condition of the road. The company have built and equipped 428¼ miles, embracing the Minnesota and Dakota divisions of their road, extending to Bismarck on the Missouri river; and the Pacific division, nearly completed, is 105¼ miles long. Adding 24 miles of main line between Thompson Junction and Duluth, jointly owned and used by the N. P. and L. S. & M. Railroad Companies, and 131 miles of the latter road, leased by the former, the whole length of the road operated by the Northern Pacific is 740 miles. It is expected that the Pacific division will be complete by November 10. Freight and passenger trains are running on all the divisions. The Minnesota and 65 miles of the Pacific division have been accepted by the government, and the Dakota division is ready for examination. The policy of the company has been to make each completed section as nearly as possible independent of through connections, and to constitute them with allied lines a remunerative transportation system in themselves. Thus the Eastern division has railroad and water connections at Duluth, St. Paul, Minneapolis, and the crossing of the Red River, and at Bismarck, the present end of the track, with steamers on the Missouri. The Pacific division connects with a steamer line navigating the Columbia River, and three-fourths of whose shares are controlled by the road; also at Tacoma, its northern terminus, with the boats of the North Pacific Steamship Company. The traffic of this division indicates that it will be more than self-sustaining at the outset.

The earnings of the several completed sections have equalled the expectations of the company's officers, and have shown a fairly rapid increase from the beginning. It is believed that the time required to develop the business of the road now constructed to such an extent that the net earnings will meet the interest on its cost will not exceed the period required for the average of new roads. The rolling-stock of the road consists of the following: 72 locomotive engines, 22 passengers cars, 6 mail and baggage, 4 immigrant, 25 dump, and 1,525 box and platform freight cars.

The number of acres sold up to the present time, fifteen months after the date of the first conveyance, is 59,353—equivalent to 94 square miles. This is exclusive of several tracts aggregating some 200,000 acres, selected by colonies and reserved for them under more or less definite stipulations of gradual purchase. The average price per acre realized is $5 48, and the total proceeds are $325,653 96. Of this amount $172,582 59 has been received in cash and bonds, and the remainder is due in yearly payments from purchasers, with a lien on the land sold. At the average price above named, the company's lands already earned would produce about $55,000,000, or nearly double the cost of the finished portion of the road.

The title to lands is in no way dependent upon the completion of the road across the continent, nor is it at all affected by routine delay in the issuing of government patents. Six hundred and forty nine thousand acres have thus far been patented to the company, and other patents are only delayed by the government surveys and the clerical labor of preparation.

It is the trustees' emphatic belief that every department of the company's service is managed with clean hands, with rigid economy, and with good judgment. Every mile of the road has been built under contracts let to the lowest responsible bidder after public advertisement and competitive bidding. The Northern Pacific Railroad is not more "premature" than were nine-tenths of all Western roads when built.

RAILROAD EARNINGS—MONTHLY.

Central Pacific (in gold):	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Total.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An asterisk (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

American Railroad Journal.

Saturday, October 18, 1873.

Stock Exchange and Money Market.

The week has been one of unusual severity in Wall Street affairs, with uneasiness and depression as the characteristic features, and toward the close a very decidedly bearish temper prevalent in Stock Exchange aff irs. The bankruptcy proceedings in the case of a prominent firm, now in suspension, and the injunctions, which followed upon Money lenders on Stock collaterals tended to seriously aggravate the Monetary stringency—making it extremely difficult to borrow funds for use at the Stock Board, or to have Stock carried on margins. The reported advance of the Bank of England rates also operated against the interests of borrowers. Money closed very firmly at $\frac{1}{2}$@$\frac{3}{16}$ of one per cent for accommodation from day to day, in addition to the legal rate, to the Stock Exchange houses, with the offerings of aid, in this line, on a very reduced scale, forcing brokers to contract their business, and, in many instances, to adopt the rule of requiring orders from customers to be accompanied by cash, thus practically reducing dealings to an actual cash basis, and, of course, very decidedly curtailing speculative transactions. In the line of discounts, there was some increase of demand for the best grades of commercial paper, but rates continued to range high as against the makers of such paper: the current quotations at the close having been from 12@18 per cent per annum. Several new failures and suspensions in the Stock and mercantile lines were reported, during the week, as the result of the protracted Money pressure, and general financial derangement. The banks report their affairs as in a much improved condition, and manifest more willingness to help the commercial classes, as they diminish their offers of assistance to the Stock brokers.

The cash balances in the United States Treasury at Washington on Tuesday were: Currency, $3,347,109; special deposits of legal tenders for the redemption of certificates of deposit, $11,325,000; coin, $80,554,141. Coin certificates, outstanding, $30,948,400. Outstanding legal tenders, $359,066,888.

The U. S. Sub-Treasury, last week, reduced its currency balance $115,080, and added to its coin reserve $3,976,654. Its currency balance at the close of the week was $2,989,569; and its coin reserve $50,534,231.

Gold receded to 108⅛, and subsequently advanced to 109⅜, closing on Wednesday at 108⅜ as against 109¾ on Wednesday of the preceding week. The demand quickened perceptibly toward the close, especially on speculative account. The export drain was light, and the customs call moderate. The specie outflow, last week, was only $527,851.

The customs demand for Gold last week, averaged $307,000 a day. The total customs revenue of the Government, in coin, at this port, since Jan. 1, 1873, has been $102,305,349, against $122,244,181 during the same time in 1872. Government has disbursed through the U. S. Sub-Treasury here, on account of the coin interest on the public debt, since January 1, 1873, $55,388,073, against $60,575,529 during the same time in 1872. The export drain of specie since January 1, 1873, has been $43,467,963 against $60,638,764 during the same portion of 1872.

The import of foreign merchandise, at New York, including dry goods amount for the past week to $7,219,707, as compared with $6,606,985 same week last year. The exports of domestic produce are $7,025,781, as against $6,114,056 last year. The exports of gold and silver $527,851, as against $155,234 last year. The customs in gold deposited during the week in the New York Office of the Treasury amounted to $1,813,000, comparing with $2,694,000 same week last October.

Foreign Exchange has been quoted higher, with a readier sale noted for prime bills, though the market closed irregularly. Bankers' sixty day bills on London closed on Wednesday at 106¾@107; sight bills on London, at 107¾@108. The week's exports of Domestic Produce have been to the enormous currency value of over seven millions.

Government securities have been in fair investment demand but at variable prices, moving more in sympathy with gold than with the course of Money.

U. S. sixes of 1881 closed on Wednesday of this week at 114@114½; U. S. Five-Twenties of 1862, 106½@107; U. S. Five-Twenties of 1864 at 107@107¼; U. S. Five-Twenties of 1865 107@

107¼; U. S. Five-Twenties of 1865 consolidated 109¾@110¼; U. S. Five-Twenties of 1867, 111¼ @111¾; U. S. Five-Twenties of 1868, 111@ 111¼; U. S. Ten-forties at 105½@106; U. S. Fives of 1881 (Funding Loan) 106½@107; Six per cent. currency Sixes from 109@109½.

Business in Railway and Miscellaneous securities has been pressed for sale at very much lower prices, yet have been far from meeting with anything like a confident demand at the reduced figures; the market closing however rather stronger.

There has been very little inquiry noted for State and Railway bonds, and values have been unsettled and more or less nominal and very irregular. Central Pacific first mortgage six per cents closed at from 87@90.

The exports of cotton for the week were from New York 7,929 bales, included in the general return of $8,378,130 of Domestic Exports, and 8,780 bales from the Southern ports direct—together 16,709 bales. In the corresponding week last year the Exports were 16 557 bales from New York and 21,277 bales from Southern ports—together 37,834 bales. The sickness at the South and the Money panic have kept back the Cotton receipts at the sea board, and the new crop receipts are now 135,000 bales behind last season.

General business has been fairly active in the produce lines, but very dull in the way of merchandise; values in nearly all instances have been much lower. Exporters have been buying quite freely of Flour, Wheat, Corn, Cheese, Tobacco, and Rosin at the modified prices. Live Stock have been quoted cheaper, with a restricted volume of dealings. The Metal trade has been very tame, and generally much depressed. Holders do not seem very willing to entertain other than cash bids. Ingot Copper has been quiet and heavy—and quoted at 24½c.; sales 40,500 lbs. on private terms. Iron has been very quiet, with prices favoring buyers decidedly, especially for cash. Only small sales transpired with Eglinton Pig, quoted at $41@$41 50; Glengarnock. do. at $42@$42 50; American do. at $40@$42; No. 2 do. at $32@$35; and No. 3 at $28@$31. Lead and Zinc dull and unsettled. Spelter very quiet, with foreign quoted at 7¼c.@7⅜c. gold. Tin dull; Straits quoted at 30c.@30¼c.,and English at 27½c., gold. Of tin plates, 250 boxes charcoal sold at $10 gold. Ocean freights have been moderately active, but on a reduced basis as to rates.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

One President to Another on the Financial Situation.

We have read in the daily journals a letter from General Grant to Mr. Cowdrey, President of the Continental National Bank of this city, concerning the present and prospective state of our finances, resumption of specie payment, &c.

While there seems to run through it a strong gleam of confidence as to the future, the writer seemingly omits no opportunity for self-information, while summering along with our Bank Presidents in their "cottages by the sea."

And, *en passant*, we may add, neither the President nor anybody else, could seek knowledge on such matters from a better or more reliable source; for we deem Mr. Cowdrey one of the soundest, most astute, as well as conservative capitalists and financiers among us. We have enjoyed his acquaintance many years, and to our own knowledge, during all that time, he has made finance, banking, &c., subjects of thorough practical study.

☞ The revenue of the Baltimore and Ohio Railroad and branches, including the Ohio divisions, for September, 1873, amounted to $1,455,248 75, showing an increase of $162,778 71, as compared with September, 1872.

Business Created by Railways.

At a time when there is a disposition to hold railways responsible for the disturbed financial condition of the country, an exchange magnanimously recalls people to the recollection of the amount of commerce and industry wholly created by and dependent upon the railways themselves. It classifies the details of the business as follows:

"1. Construction; 2. Rolling stock: 3. Repairs; 4. Supplies for running. The first embraces lumber for sleepers and wooden bridges and stations; iron for rails, chairs, iron bridges and workmen's tools; stone for bridge piers and retaining walls; bricks for stations. The second includes locomotives, passenger cars and freight cars. The third requires a renewal of all these constantly to remedy accidents and wear and tear. The fourth demands wood and coal for fuel, lubricating oil for wheels, and burning oil for cars. This is exclusive of account books, stationery, etc. Now let the reader take seventy thousand miles of railway and apply all these items and see whether the result gives a trade that is in the aggregate small or large."

Some very forcible illustrations are given of the business created by railways. Two institutions in Philadelphia are referred to—Baldwin's locomotive works and Whitney's car wheel factory:

"The first covers six entire squares in that city, employs five thousand men, supports twenty thousand persons, and turns out work annually worth at least five millions of dollars. The second occupies a square of ground, and besides supplying American railways, exports car wheels to Europe."

The North Pacific Road alone expended five millions of dollars at one time in Philadelphia for rails, engines, cars, etc. Last year one million tons of rails alone were used on our American roads.

Erie Railway.

The Rochester *Union* says that the Erie Railway Company's civil engineers have just completed the preliminary surveys for a new line through Western New York, from Portage to Buffalo. The route starts from Portage, follows the Eastcoy creek through Wyoming county, passes the villages of Java Centre and Strykerville, then enters Erie county, passing through Wales, two miles north of the village of Aurora, through the township of that name, thence following the Buffalo Creek through the townships of Marilla and Lancaster, and so on to Buffalo. The new route, if adopted and built according to the survey just made, will not in any way interfere with the present line. It is not intended as a substitute for, but rather auxiliary to, the line now used.

☞ The earnings of the Union Pacific Railroad for August, 1873, were $837,277 00, the expenses $400,947 00, and the net earnings $436,330 00. In August, 1872, the earnings were $789,567 00, the expenses, $358,525 00, and the net earnings $431,042 00—showing an increase in earnings of $47,710 00, with an increase in expenses of $42,422 00, making the increase in net earnings $5,288 00. From January 1 to Aug. 31, 1873, the earnings were $6,297,087 00, the expenses $3,191,044 00, and the net earnings $3,106,043 00—showing an increase in gross earnings compared with 1872 of $922,521 00, and an increase in net earnings of $834,980 00.

☞ The estimated earnings of the Kansas Pacific Railway for the week ending Sept. 30, are: freight, $75,014 44; passengers, $37,677 17—total, $102,691 61.

The Cumming Nut-Lock.

The Lock-Nut and Bolt Company, 61 Broadway, New York, manufacture all kinds of bolts for fish bars, bridges, cars, machinery, etc., with the Cumming Nut Lock, the only method of locking a nut to the bolt. The device is a simple one, designed to remedy the difficulty which every mechanic has experienced, the working loose of nuts, causing annoyance, and if not attended to, many accidents. The invention consists in cutting a groove in the bolt in which a piece of copper wire is laid, and the nut, when turned on, cuts a thread in the wire. When the nut has been turned as far as is desired, the end of the wire is started out of the groove and riveted, entirely preventing the nut from working loose. This does not interfere with turning the nut off with a wrench, as it readily cuts its way over the wire again. The saving to railroad companies in the cost of help required to tighten bolts, which, without this, work loose, more then compensates for the additional cost of these bolts, and all who have had trouble in the past in the working loose of nuts will find a remedy in this simple device. These bolts are now in use on 90 railroads, for tracks, switches, engines, and cars, and are also extensively used on running machinery in South America, Mexico, and Colorado. They are especially valuable upon agricultural implements, and upon trip-hammers, and all kinds of machinery, in fact everywhere. The company, when desired, arrange on liberal terms with manufacturers, and allow them to make and use these bolts upon the payment of a royalty which costs even less than check nuts do. They seem determined to secure a large use for their invention.

☞ The Philadelphia *Ledger* reports the total anthracite coal tonnage for the week ending October 4, at 494,907 tons, and for the coal year 15,341,685 tons, against 14,630,787 tons to corresponding time last year, being an increase of 710,898 tons. The bituminous tonnage for the week is 84,386 tons, and for the year 2,401,636 tons, giving a total of all kinds for the week of 579,293 tons, and for the year of 17,743,321 tons, against 16,767,437 to same time last year, being an increase of 975,884 tons.

☞ At a meeting of the gentlemen interested in the building of a new railroad from Chicago to Charleston, S. C., held in Chicago last week, the following officers were elected: Governor Magoffin, of Kentucky, president; Cyrus H. McCormick, of Chicago; James N. Sims, of Indiana; J. H. Johnson, of Kentucky; A. G. Wilson, of Tennessee; Thomas L. Clingman, of North Carolina; General J. W. Harrison, of South Carolina, and Mr. Erwin, of Georgia, vice-presidents; Major N. J. Vail, of Illinois, secretary. The road is to be known as the Chicago and South Atlantic Railway.

☞ The Rockingham (Va.) *Register* says that the work of laying the rails on the Valley Railroad has been commenced at Harrisonburg. There is a large force engaged in the work, and the completion of the line to Staunton at an early day is beyond peradventure.

☞ The Lancaster (Penn.) *Express* says that work on the Peach Bottom Railroad is going on as vigorously as ever.

Missouri, Kansas and Texas Railway.

The President of the Missouri, Kansas and Texas Railway Company has communicated to the New York Stock Exchange through its President the following notice:

In conformity with a rule of the Board of Brokers, requiring a notification of the amount of increase proposed to be made in the stocks and bonds quoted at your Exchange, I have the honor to inform you that at the late annual meeting of the stockholders of the Missouri, Kansas and Texas Railway Company, at which more than two-thirds of the entire capital stock were represented, the capital stock (common) of said company was increased $4,460,000, on account of one hundred and forty-two miles of newly acquired road running from Sedalia, in the State of Missouri, to Hannibal, in said State. The amount of the capital stock on 785 miles of road is now $21,405,000; total bonds, $17,900,000.

☞ Surveys are being made for the Iron Valley and Pennsylvania Line Railroad, from the Baltimore and Ohio Railroad, at the mouth of Raccoon creek (near Tunnelton,) north by east through Kingwood, crossing Cheat river near the mouth of Muddy creek, and then through the valleys of several small streams to the Pennsylvania State line, at the crossing of Big Sandy creek. This line is forty miles long, and is to be extended by a Pennsylvania Company fifteen miles to Ohio Pyle Falls, on the Pittsburg, Washington and Baltimore Railroad.

☞ The Montreal *Gazette* of 11th inst. says: "We are in a position, from information received from a well informed source, to announce that the Canadian Pacific Railway Company has come to an understanding with the government to surrender the contract, and that the arrangements for its surrender will probably be completed in a few days. This information has not been unexpected, as the labors of the opposition to obstruct the company in its efforts to secure the necessary capital to construct the line, made success impossible."

☞ The experiment made on the railroads of the Pennsylvania Company extending from Pittsburgh to Erie, Cincinnati, Chicago and Indianapolis, of telegraphic time signals, under the supervision of O. H. Booth, Superintendent of Telegraph, has worked so well in the running of trains that it is determined to continue the system permanently. The time used on all the roads is Columbus time and is regulated by the astronomical clock at the Allegheny Observatory each day.

☞ The progress of the Hoosac Tunnel during September was as follows: from central shaft westward, 184 feet; from western end eastward, 132 feet, making the total heading from the east portal 14,577 feet, and from the west portal 9,902 feet, leaving 552 feet only to be opened on October 1, 1873.

☞ Negotiations between the Norfolk and Great Western Railroad Company and English capitalists are pending for the purpose of selling a sufficient amount of its bonds to insure the early construction of the road.

☞ The Wheeling and Lake Erie Railroad Company have filed with the Secretary of State a certificate of increase of capital stock from $4,000,000 to $8,700,000.

Journal of Railroad Law.

RAILROAD COMPANIES—WHEN PASSENGERS SHOULD NOT ENTER TRAIN.

The facts of the late case of Johnson *vs.* The West Chester and Philadelphia Railroad Company (70 Penn. st., 857), are fully and clearly stated in the following opinion by—

AGNEW, J.—This case appears to have been carefully tried by the learned and able judge in the court below. Yet, after an attentive examination, we are led to the conclusion, that the rule of concurrent negligence was held a little too closely against the plaintiff, and the province of the jury rather trenched upon. The judge himself states the well-known rule that, "generally what constitutes negligence in a particular case, is a question for the jury:" Kay *vs.* Pennsylvania R. R. Co., 15 P. F. Smith, 273. But we think his error was in laying down as a rule of law, a matter which was only an element in the evidence, to wit; that if the train was distinctly running on the track, so as to be perceptible to those alongside, the plaintiff was guilty of negligence in attempting to enter upon the train, and could not recover. The following passages in the charge, perhaps most clearly denote the spirit and meaning of the instruction given to the jury:

"Yet, if the train was entirely still when he stepped from the platform by its side, it is not suggested that there was any want of care in the attempt to enter. If, however, it was not entirely still—was in the act of starting—taking up the slack as one of the witnesses denominated it, but was not yet distinctly under way, when he attempted to enter, then it is for you to determine whether he was or was not guilty of carelessness in making the attempt, encumbered as he was." The defendant has asked to instruct you, that if the train was in motion when the plaintiff attempted to get upon it, he was guilty of negligence, and cannot recover. If by the term "motion" is meant running upon the track—distinctly running so as to be perceptible to those alongside—the point is affirmed, otherwise it is not. There may have been some motion incident to starting, and preceding it, yet of so slight a character, that the law cannot pronounce an attempt to enter at the time negligence; but must leave it to the jury to judge of it in the light of all the circumstances. But if the train was distinctly running on the track when the plaintiff attempted to enter, then he was guilty of negligence, and cannot recover.

It is evident, that the meaning which a jury would draw from the charge was, that if the preparation for starting was over, and the train was under way, that, no matter how slow the motion, yet if the running of the train on the track was distinctly visible to a bystander, the plaintiff's time to enter was past, and his attempt to get on the train would be such culpable negligence in law as would bar his recovery. That such a rule may be applicable in some cases, may be true, though we do not now affirm it. But clearly we are not to leave out of view, in all cases, the conduct of the railroad company in producing the result, and the natural and probable effect that conduct has had upon the mind of the passenger in influencing his act. There cannot be an inexorable rule so unbending that no circumstances begotten by the railroad company itself, shall not hange it. Even when a train is distinctly under way, there are cases, and this was one, where it must be left to the jury to say whether the danger of going aboard was so apparent that it would be culpable negligence in the passenger to attempt it. Here the West Chester Railroad Company had a running arrangement with the Philadelphia and Baltimore Central Railroad Co., by which their trains met at the Baltimore Junction, and passengers were received from each on through tickets. The plaintiff's ticket is not questioned. Under such an arrangement, it is the duty of each company to give a reasonable time for the transfer of passengers and their baggage. In this instance, it appears that the West Chester train began to move almost as soon as the Baltimore train stopped. It seems that the conductor of the latter signalled the conductor of the former, that he had no passengers for the West Chester train. But the plaintiff, who had a through-ticket, was not responsible for this mistake. Reasonable time should be allowed to develop the fact whether there are passengers. A through-ticket, issued under such an arrangement, is binding on both roads. The plaintiff, it seems, hastened across the platform, and attempted to enter, but being encumbered with a valise, a bundle, and a coil of pipe on his arms, he missed his footing, fell to the track, and his right arm was crushed by the wheels of the car. The fact appears to be clear, that a reasonable time for the transfer was not given, and that the plaintiff, with all his effort to make haste, was unable to make the connection in consequence of this want of time. Now, though the train was distinctly in motion, so that a bystander, cool and unconcerned, could see it visibly running on the track, are we to say, as a matter of law, binding on the jury, that a passenger, having a right to go on the train, and seeing himself about to be left improperly by the wayside, is guilty of culpable legal negligence, if he should essay to reach his destination, no matter how slow the motion in running might be, or how little danger was apparent to him? He may be guilty of negligence, but of this the jury should judge under the circumstances. He may not "set his life or limbs on the hazard of a leap on the running train," as the judge emphatically said, and doubtless if such was the character of his attempt, it would be negligence. The expression "leap at a running train," denotes a higher effort and less consideration on the part of the traveler, than merely attempting to board a car under way. In the former a jury might discover negligence, while in the latter, they might not, in view of the circumstances, discover any. In discussing the conduct of the passenger merely, we are not to lay out of sight the wrong of the company, in its influence upon his mind and act. He may have strong motives to reach his destination—indeed, no man but must feel, and feel strongly, at being left by the wayside; he is conscious of his right to go aboard, and naturally becomes excited at the sight of the moving train, perhaps is alarmed, and in some degree confused. If the train be running slowly, and the danger is not apparent to him, what so natural as that he should hurry to reach the train, and to get aboard?

But if we lay down the inexorable rule for this and every other case, that whenever the train can be seen to be distinctly running, it is legal negligence to attempt to get on, we set a premium on the wrong of the company, which influenced the very act itself. To say that whenever the motion of the train is so distinct that bystanders can see it under way, and running along the track, the passenger is to be as cool and unconcerned as they, fold his arms, and say to himself, I'll sue you for this breach of contract in leaving me here, is to him bitterness itself. He may be a stranger, and know not where to find accommodations, the severity of the winter may surround him, or the heat of summer oppress him; the elements may war against him, and night or approaching darkness may heighten his alarm. Or, if no stranger, his business may be urgent; his family may require his presence; his health may be poor; his means limited; his desire to reach his destination overpowering, and a hundred reasons may influence him to go on. Now, are we to say that the wrong which has caused his mind to be excited and aroused his fears, which confuses him, and has made him less cool and calculating than those who are standing by, and can look upon the parting train without emotion, is not to be taken into the account in considering his act? What caused his state of mind? Not his own carelessness or breach of duty as a passenger, but the illegal and wrongful act of the carriers. Surely it does not lie in the mouth of the railroad company to say to him, the law will take no account of our breach of duty in its effect upon you. You ought not to have suffered it to move you, but if you saw our train moving along the track, the slack taken up the train stretched out, and the cars under way, so that any one could distinctly see it running, you ought to have looked upon our leaving you on the wayside with perfect coolness; made no effort to go, and sued us for our breach of the contract of carriage. No matter how slow the motion of the train was, nor how little danger in getting on was apparent to you, or what the state of your mind caused by our wrongful act, it is not a question for the jury under the circumstances, but the law holds you guilty of culpable negligence in the attempt to board the train, and we are allowed to go free. This is too stringent a rule for the case. Culpable negligence is the omission to do something which a reasonable, prudent and honest man would do, or the doing of something which such a man would not do, under all the circumstances surrounding the particular case: Shearman and Redfield on negligence, § 7; Kay *vs.* Penna. Railroad Co., 15 P. F. Smith, 273. Instead, therefore, of the rule laid down by the learned judge, he should have left it to the jury to say, under all circumstances in evidence, whether the danger of boarding the train, when in motion, was so apparent as to have made it the duty of the plaintiff to desist from the attempt. There is no objection to the court's assisting the jury in the performance of their duty, by reminding them of the danger of boarding a train in motion, and the caution and care that passengers should use, as well as of the duties of the carriers, and the influence of their wrongful acts, in producing the catastrophe. But railroad companies are bound to remember that they owe duties to the public, for whose benefit their charters have been granted, and therefore should not be lightly loosed from the effects of their own wrongful acts. We are of opinion the court

should have left the question of negligence on the part of the plaintiff to be determined by the jury upon the circumstances, and under an instruction less stringent and binding as to the duty of the plaintiff.

Judgment reversed, and a *venire facias de novo* awarded.

An Improved Box Car.

Our attention has been drawn to a box car, of improved pattern, now running on the Great Western Railway, and which differs in some important respects from the ordinary car in use. As everybody knows, the common box car has two doors opposite each other, placed midway in the sides; many cars have also an end-door, used only for loading such freight as cannot conveniently be got in at the side doors. But in the new car to which we refer the doors are placed opposite each other at one end of each side, and the single end door is dispensed with. The advantages claimed for the new design are numerous. The strength of the car is greatly increased, and its load-carrying capacity corresponding multiplied.

This arises from the fact that the side bracing is continuous and solid between the two points of support upon which the car rests, there being no opening or break in the middle in the place where the side door is ordinarily placed, just where strength is required. It is the general complaint of railroad men, that cars employed in carrying heavy freight are continually requiring to be run into the shops for repairs in consequence of their "sagging," as it is technically called, in the centre. From this liability of the ordinary car to give way at its weak points, results another very serious inconvenience, in the twisting and spreading of the roof, rendering it leaky, and frequently causing freight to be damaged while in transit. In the improved car under the heaviest load there will be no danger of this, as the centre is as strong as any part of the car. The great advantage of having the doors placed in the end of the sides lies in the fact that by this means long lengths of lumber, long rails, and other long freight can be loaded in box cars with as much facility as any other kind. The longest length hitherto got into a box car without an end door is sixteen feet; but in the improved car of the ordinary length of thirty two feet, lumber, etc., up to thirty feet in length can be loaded. The end door, sometimes introduced in box cars of the old pattern was practically useless, as it required the cars to be cut off from their train and a long clear space left at the end of each car before it could be loaded. This extra door was also much objected to as lessening the security of the car against fire and pilferage. It is claimed for the improved box car that it possesses all the advantages of both the box and the flat or platform cars; and that rail roads requiring cars of both descriptions to accommodate different sorts of freight may, by the adoption of this new principle, obviate the necessity of large outlay in car stock. An instance of this may be noted in the case of the traffic arising on the W. G. & B. R. Full train loads of lumber come down that road, and large quantities of merchandise require to be sent up north to supply the requirements of the numerous towns and villages in that district. For the former traffic platform cars have to be sent up empty returning loaded; for the latter, box cars are sent up loaded returning empty. By the adoption of the improved pattern, the same car would be equally available for both descriptions of traffic, and might be loaded both ways, to the great convenience of both the railway company and the public. One of these improved cars has been constructed, and is now running on the Great Western Railway giving the most complete satisfaction; it has been examined and approved by many railroad officials, and will likely soon come into general adoption on our railroads. We understand that the Great Western Railway Company will soon have seventy five more cars of the improved pattern running on that road. The inventor of the new improved box car is Mr. Joseph Taylor, General Superintendent's Assistant, G. W. R., Hamilton.—*Hamilton (Ca.) Times.*

Grand Trunk Railway.

The Ottawa (Ca.) *Gazette*, in noticing the recent change of gauge on the Grand Trunk Railway, west of Montreal, from 5 ft. 6 in. to 4 ft. 8½ in., says:

A large number of the one hundred and fifty narrow gauge engines contracted for in the Spring have been delivered upon the line, and have proved by their trial trips to be first-class machines, capable of hauling very large trains of cars. Nearly a thousand new box and platform cars have also been delivered, whilst the conversion of about two thousand five hundred freight cars is taking place at Point St. Charles and Stratford, to the narrow gauge, two hundred being so changed during every twenty-four hours at the present time. This is accomplished by the use of the "Nutter Elevating Machine" by which the cars are raised off the broad gauge trucks, which are then taken away, and the narrow gauge trucks run under the car when it is lowered on them.

It is contemplated that with this change of gauge, which will enable the Grand Trunk Company to interchange rolling stock with roads east and west, and with the very large additional capacity of its own the road will be in a position to handle an almost unlimited amount of traffic, and will be so fully equipped with locomotive power and car stock as to give the country every possible facility in the transport of its products. At the end of October the line between Toronto and Montreal will have been renewed with steel rails to the extent of two hundred and sixty miles, and by the end of 1875, it is expected that the whole road bed, both east and west, will be of steel, a large quantity having already been laid west of Toronto and east of Montreal, in addition to the central district.

The line east of Montreal it is contemplated to convert to the narrow gauge next year, and when this is done the whole line will be of the 4 ft. 8½ in. pattern, thus enabling cars to be inter-changed also at Portland, as well as at St. John, Buffalo and Detroit. As soon as this is consummated cars will be interchanged with nearly three hundred railway companies permitting merchandize to be transported all over the continent without breaking bulk.

Of course, during the interruption necessitated by this change of gauge, involving very extensive work, the traffic will be somewhat interfered with; but as soon as everything is in working order again, with a road bed principally of steel, and an equipment in the shape of stock equal to anything in the world; and with the opening of the International Bridge across the Niagara river at Buffalo, enabling the company to compete satisfactorily with other lines, the business must be immense, and the receipts such as to gladden the hearts of the English shareholders and give them renewed confidence in the prospective value of their great Canadian railway property.

Canadian Railway Law.

His Lordship, Justice Morrison, in addressing the jury in a case where damages were claimed against the Grand Trunk Railway for the loss of a trunk and contents, said that no railway company was liable for any loss in this manner other than personal effects. For instance, if a jeweller, in coming from Toronto to Hamilton, should put a lot of valuable gold watches in his trunk, and check it, and it be lost from carelessness, fire or thieving, the Railway Company would be responsible for nothing beyond the trunk itself, unless there was wearing apparel or personal effects therein besides. There are the express lines, or the freight, if one has valuables to send anywhere. In the case we speak of, the plaintiff claimed $750 for clothing, personal effects, patent office papers, deeds, etc., but the jury only found for $145, the proven value of the personal effects in the trunk. The trunk was stolen from a stage in Buffalo, while en route between two railway depots.

☞ Articles of consolidation were filed a short time ago with the Secretary of State of Indiana, between the Chicago and Atlantic, the Chicago and Atlantic Extension, and the Baltimore, Pittsburg and Chicago Railroad Companies. This last named is the company which is now constructing the Baltimore and Ohio Company's line to Chicago. The object of the consolidated company is to build a direct line from Chicago to the eastern line of Ohio, there to connect with a line from that point to Pittsburgh. The capital stock is to be $400,000, and the general offices will be in Chicago.

☞ The receipts of the Lehigh Coal and Navigation Company from January 1 to October 1, 1873 were: from rent of Lehigh and Susquehanna Railroad, $827,837; canal tolls, $435,177; tolls Nesquehoning tunnel, $19,100; profits on coal, $260,858—total, $1,542,972, against $1,062,889 from same sources for the corresponding period of the previous year—an increase of $480,083. Less increase in interest, taxes, expenses, etc., $170,000—making the net increase $310,083.

☞ A dividend of five per cent was declared on the stock of the main stem of the Baltimore and Ohio Road for the half year ended 30th September last, payable on and after the 15th November proximo, and a similar dividend on the stock of the Washington Branch Railroad, payable on and after the 31st October inst. at the Merchants' National Bank of Baltimore.

RAILROAD IRON.

ENGLISH and AMERICAN RAILROAD IRON for delivery in New York and other markets in the United States. For sale by

WM. H. PETIT & PIKE,
72 Wall-st., New York.

FOR SALE.

LANSDELL'S
Patent Steam Railroad Water Station.

DISPENSES WITH **Tanks, Tank Houses, Stationary Power,** AND **Attendance.**

CAN NOT **FREEZE** IN ANY **CLIMATE,** UNDER ANY **CIRCUMSTANCES.**

COSTS LESS Than One Half the Price of a FROST PROOF TANK.

The Engineer in charge of the Locomotive attaches the Hose A to a steam valve in the boiler. Steam passed through the pipe D and slip joint F into the globe H, producing a vacuum; the water is then lifted through the pipes I I and forced through the column E and hose C into the tender, filling any ordinary tender in about three minutes. When steam is shut off all the water in the pipes returns into the well, and any condensed steam passes off through the drip valve G, leaving nothing to freeze. The handle B serves to turn the discharge pipe and hose in any direction. The water delivered into the tender is warm, thus utilizing the steam used. The discharge tubes, represented above made of hose, can be made of iron if preferred.

LENG & OGDEN,
IRON AND STEEL DEALERS & IMPORTERS,
No. 4 FLETCHER STREET, NEW YORK.

WELLAND CANAL
ENLARGEMENT.

Notice to Contractors.

SEALED TENDERS, Addressed to the undersigned, and endorsed "Tender for Welland Canal," will be received at this office until noon of

Saturday, the Eighteenth Day of October Next,

For the construction of fourteen Locks and fourteen regulating Weirs, a number of Bridge Abutments and Piers—the excavation of the Lock and Weir Pits—the intervening Reaches, Race ways, &c., on the new portion of the WELLAND CANAL, between Thorold and Port Dalhousie.

The work will be let in sections, six of which, numbered respectively 2, 3, 4, 5, 6, and 7, are situated between Port Dalhousie and St. Catherines Cemetery, and three (numbered 12, 13 and 14) extend from the northern side of the Great Western Railway to near Brown's Cement Kilns.

Tenders will also be received for the enlargement and deepening of the prism of the present Canal between Port Robinson and the Aquednct at Welland; work to be let in sections, each about a mile in length.

Tenders are also invited for the completion of the deepening and enlargement of the Harbor at Port Colborne.

Maps of the several localities, together with Plans and Specifications of the work, can be seen at this office, on and after THURSDAY, the TWENTY FIFTH day of SEPTEMBER instant, where printed forms of Tender will be furnished. A like class of information relative to the works north of Thorold, may be obtained at the Resident Engineer's Office, Thorold; and for works at and above Port Robinson, Plans, &c., may be seen at the Resident Engineer's Office, Welland.

All Tenders must be made on the printed forms supplied, and to each must be attached the actual signatures of two responsible and solvent persons, residents of the Dominion, willing to become sureties for the due fulfilment of the contract.

This Department does not, however, bind itself to accept the lowest or any Tender.

By order,
F. BRAUN.
Secretary.

Department of Public Works,

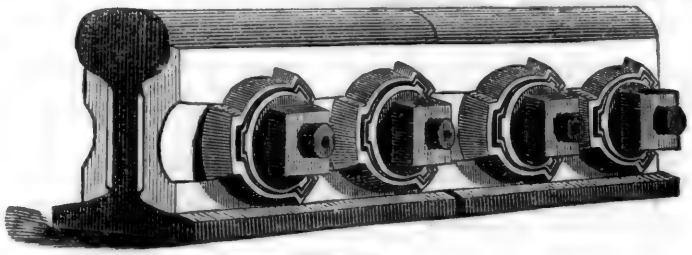
IMPROVED August 23, 1870.



Unequalled for Cheapness, Simplicity and Effectiveness.

DESCRIPTION.—A pointed copper key is placed in a groove cut in the threaded part of the bolt, *over which* the nut is screwed to its position, cutting its own thread in the copper, thereby taking up all the slack between the bolt and the nut. By riveting up against the face of the nut the projecting portion of the copper key, the nut is firmly locked in its position, but can be readily adjusted or removed with a wrench without injury to either bolt or nut.

Severely tested for over *four years*, they have *never failed*, and are *now in use on over fifty Railroads*, giving perfect satisfaction. We solicit a trial *anywhere*.

Licenses Granted to R. R. Companies, Car Builders and others.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,

IRON AND STEEL MANUFACTURERS,

No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

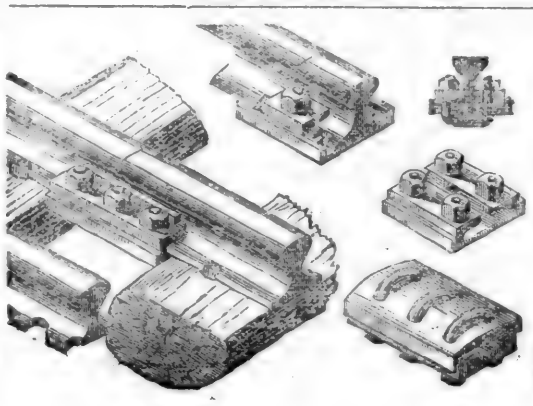
The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.



That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

FISHER'S PATENT

Wrought Iron

RAIL JOINTS,

MADE BY

FISHER & NORRIS,

TRENTON, N. J.

The Superiority of these Joints has been proved by eight years' use on different Roads.

American Railroad Journal.

New York, Saturday, October 25, 1873.

Notable Features of the Fair.

The Annual Fair of the American Institute is now well under way, and we advise all who have not yet paid it a visit to take an early opportunity of doing so. We have already been in several times, and our interest and enjoyment seem to increase with each succeeding visit.

In many respects, the exhibition this year is somewhat different from its predecessors. There is not so full a display of agricultural products of the various kinds, as we have seen in former years; but, in improved farming implements, in specimen works of art, in textile fabrics, and the various hand and power manufactures, it is believed the present display has not been excelled.

But in the brief space which we are able to devote to this subject, our object is mainly to take notice of a few of the more important articles or improvements applicable to railroads, mining, and steam engineering generally.

For tunnelling, or any manner of work presenting rocky obstructions, we find exhibited a very superior specimen of Rock Drill that works either horizontally, vertically, or any intermediate incline or angle, that may be desired. The Drill-shaft is driven by compressed air power, and is forced into the solid gray, iron rock at a most marvellously rapid rate.

STONE BREAKER AND CRUSHER.

We observe that there is on exhibition again this year a sample of Blake's Stone Breaking Machine. If we are not mistaken, the first device of this sort ever invented and put to practical use was brought out by Mr. Blake. The strong iron jaws of this machine crack to pieces the hardest stones, as easily as a schoolboy chews up sugar plums. We observe the proprietor offers a large reward to any person who will produce a piece of rock or a stone that this apparatus will not immediately break into fragments.

PATENT AXLE BOX.

A most important item in railroad equipment is the new and improved axle-box, shown here, and which seems to be capable of working equally well with either water or oil as a lubricator. The box is easily cleaned and refilled without disturbing the car; is very simple, and yet very effective and durable, and can be made in any desired form, and applied to all styles or sizes of axle. It is also well adapted for use in factories, mills, on steamships, etc. We believe this invention has been very fully tested by actual use for several years, and hence we must conclude that the inventor's theories have now passed into the domain of practical realities.

PERRY'S CENTRIFUGAL PUMP.

Or, as we should style it, if we had the christening of it, "Perry's Patent Niagara," seems to possess the power of displacing more water in a shorter time, than any other pump we ever saw. Apparently, there is no limit to the volume of water this machine is capable of throwing.

ROYCE'S AIR COMPRESSOR.

The principle of creating or transmitting power by means of compressed air, is now undergoing practical demonstration. Under the intelligent guidance of Mr. Horace H. Day, the invention referred to, is being applied to a variety of industrial purposes. Indeed, from what has already been accomplished, we would not be surprised to see this mode of obtaining power, invade the dominion of steam, and become specially valuable for a variety of uses where steam is not so well adapted and cannot compete.

At the Fair, compressed air power may every day be seen at work driving pumps, rotary and other engines, besides working the Rock Drill above referred. We shall watch and note the development of this new element of power, with a great deal of interest.

CIRCULAR SAW MILL, ELY'S PATENT.

F. C. Candee & Co., of 57 Liberty street, have on exhibition a full sized Saw-mill, doing its regular work right along, ripping up logs of any length into boards of any degree of thickness, bevelled or straight, with most marvellous precision and speed. We should suppose nothing less than 75,000 feet of boards would be a day's work for this machine, and being almost automatic in its various motions, requires only trifling attendance.

It runs the saw through the log or timber with surprising velocity, throws it quickly back, sidewise or at an angle with equal facility, and in fact handles a big tree much after the manner those fabled giants used them for walking sticks, as we used to read wonderingly in our boyhood days.

Really, we look upon this improvement in sawmills as one of the first importance to the lumbering interest everywhere, and those interested Western friends of ours, cannot we think do better than turn their attention in the direction here indicated.

THAT ROTARY.

Continuing our search after useful information, in the interest more especially now, of steam engineering, our ready ears are presently greeted by a slight whizzing sort of sound faintly resembling that produced by the passage through the air of those pleasent little Minnie balls, during our late war. Looking around we find ourselves in the main passage of Department 5, standing just beside a little affair, in size and shape somewhat resembling a big California pear, and fastened to a pillar of the building. Is this a joke, or what it is? Ah! no reader, it is designed, as we verily believe, to be one of the most useful, practical realities of the Fair.

It is a Rotary Steam Engine, on an entirely new principle; and they all say it is the *ne plus ultra* of all efforts to utilize steam economically. The buzzing sound referred to, is caused by the fly-

wheel cutting the air, in its unnumbered thousands of revolutions per minute—how many, indeed, no man can begin to count. This little machine is operated solely by compressed air furnished by Mr. Day's Air Compressor just opposite. This working model, only a trifle larger than one's fist, possesses, it is said, fully one horse power.

This engine evidently combines the minimum of friction, with the maximum of simplicity, compactness, power, economy of operation, durability and construction. Indeed, the parts are so few and simple, that the whole thing can be built, we are assured, for about one-half the cost of any other of equal power, and is adapted to all uses where steam power is required.

A card attached bears the name of Edward Myers, C. E., late of London, now residing at American Hotel, Jersey City, as Patentee, and we are not surprised to learn that several orders are taken every evening, for large sized working engines for different uses.

In closing this hasty sketch, we may be permitted to add, that gentlemen who control the valuable inventions we have here specified, and the thousand others our space prevents naming at this time, will assuredly promote their own interests greatly, by making known through our columns to its numerous readers, (nearly every one a consumer) the merits and chief features of their several articles and improvements.

Northern Pacific Railroad.

The Minneapolis *Tribune* of October 17th has the following regarding the Northern Pacific Railroad:

The General Manager, C. W. Mead, of the Northern Pacific Railroad, was in the city yesterday, and in the course of a conversation, he stated that it is proposed by the management to operate the road as far as Jamestown this winter, certainly, as the road is supplied with snow fences, etc., to that point. If the winter is not a severe one the trains will run to Bismark; but if it is at all hard, they will be discontinued. Jamestown is about one hundred miles west of Fargo. Work on the road is to be begun and prosecuted with vigor in the spring. General Cass has appointed the following gentlemen as Commissioners to examine and report upon the condition of the road: A. C. Sands, of Cincinnati; George W. Steele, of Painesville, Ohio, and General W. G. Leduc, of Hastings. These gentlemen will start from St. Paul this forenoon in a special car, and with Mr. Mead, will go over the road. Their report will be looked for with interest.

The Steam Canal Boat Trial.

In reference to the trial of the canal steamboats competing for the $100,000 State prize in New York, the *Evening Post* says:

The trial of the steam canal boats has shown that none of them come up to the requirements. It is probable that the C. C. Pope comes nearer to the requirement of the law than any other, although its entire average speed falls considerably short of three miles per hour, and the amount of coal consumed is about five hundred pounds more than that used by the Baxter. The commissioners have decided to hold a meeting to consult informally over the result of the trial in Syracuse next Tuesday. No formal report will then be made, but the data gained by the several members will be compared and collated with reference to a full report to be presented to the Legislature this winter.

The Syracuse *Journal* gives the following conclusions, drawn from remarks made by several of the commissioners:

First.—That it is quite impossible to invent any machinery that will propel a boat carrying two hundred tons at a less cost than when moved by horse power, with the present dimensions of the canal.

Second.—That boats as now constructed are too large for the capacity of the canal, there progress being retarded by natural and well-known laws relating to space for the displacement of water.

Third.—That as the law requires that inventions shall be of a character making them practical for superseding horse power, an award is not likely to follow the test.

Fourth.—The law requires a speed of at least three miles an hour, as none of the boats made that time, an award cannot be legally made.

Toledo, Wabash and Western Railway.

The earnings of this road for the years ending December 31, 1871 and 1872, were as follows:

	1871.	1872.
From passengers	$1,228,193 41	$1,132,764 60
" freight	4,027,722 93	4,311,970 28
" mails	84,200 04	105,809 73
" express	97,652 12	94,664 64
" miscellaneous	298,897 41	363,768 40
	$5,736,665 91	$6,008,977 65

The expenses of 1872 were:

Conducting transp.	$1,156,917 13	
Motive power and cars	1,597,812 28	
Repairs of roadway and structures	625,308 86	
Renewals of roadway and structures	777,078 93	
Renewals of equipment	4,115 70	
General expenses	69,126 85	
Taxes	101,541 30	
Insurance, 1872	33,243 07	
		4,365,143 62
Net earnings, 1872		$1,643,834 03
Balance from previous year		1,022,462 71
Proceeds of sale of elevators		250,000 00
Bonds Gt. Western Railway, 1859, sold		16,000 00
Total		$2,932,296 74

Thus accounted for—

Construction and improvement, roadway and structures	$519,380 91
Construction and improvement, equipment	7,849 85
Profit and loss	36,644 28
Insurance of 1871, not classed in expense account for that year	15 652 31
Interest account	1,356,560 88
Balance income account, 1872	996,208 51
Total, as above	$2,932,296 74

Compared with the previous year the gross earnings of 1872 show an increase of $272,311 74, with an increase in expenses of $588,315 69, making a decrease in net earnings of $316,003 95.

The receipts from all sources, and total disbursements in 1872, were as follows:

Receipts.

Gross revenue	$6,008,977 65
Proceeds of sale of elevators	250,000 00
Bonds of Gt. Western Railway, 1859, sold	16,000 00
Decrease in wood and supplies	44,450 92
Lake Shore and Michigan Southern Railway	10,838 41
Snell, Taylor and Co	8,041 97
Cin., Ind. and Lafayette R. R	10,634 41
Railroads and Individuals	4,951 19
Hannibal Bridge Co.	18 870 94
Wabash Equipment Co	179,125 00
U. S. Post-office department	467 00
Cash	871,251 96
Total	$6,926,159 45

Disbursements.

Operating expenses and renewals		$4,365,143 62
Equipment, etc		7,849 85
Construction and improvements		519,330 91
Assets for the year	$626 220 10	
Less liabilities	384,761 31	
		241,458 79
Interest—less unpaid coupons		1,339,508 96
Interest coupons previous year paid		9,544 00
Bills payable of 1871 paid		6,018 00
Over-draft of 1871 at Toledo paid		121,599 42
Interest account leased lines—less surplus earnings & unpaid coupons		176,534 10
Interest account Hannibal bridge—less surplus earnings		64,912 79
Keokuk bridge—deficiency of earnings		15.889 00
Bloomington telegraph line		3,023 42
Profit and loss		86,644 28
Insurance for 1871—not included in expense of that year		15,652 31
Total, as above		$6,923,159 45

The number of miles of railway owned by this company, and whose operations are included in this report, are—

	miles.
Main line in Ohio	75.5
Main line in Indiana	166.1
Main line in Illinois	110 5
Main line, Camp Point to Quincy, (leased)	21.5
	473.6
Keokuk branch	41.5
St. Louis branch	109.0
Naples branch	4.0
	154.5
	628.1

The leased lines are operated separate and distinct from the road owned, and their accounts are not embraced in any of the statements and reports of this company. Including these, the total miles operated, owned and leased amount to 934.2. They are as follows:

	Miles.
Lafayette, Ind., to Bloomington, Ill	116.7
Pekin and Decatur	67.2
Hannibal and Naples (including Pittsfield branch)	52.0
Hannibal and Moberly (in Missouri)	70.2
Total length of leased lines	306.1

The company has added to its equipment during the year 7 locomotives, 14 baggage and passenger cars and 998 freight cars; leaving at the close of the year, 189 locomotives, 102 passenger, mail and baggage cars, and 4,294 freight cars of all classes. The report says:

The freight earnings of the road show an increase of $284,247 35, over 1871. This increase has been realized under peculiarly adverse circumstances, and but very inadequately represents the extent of the actual revenues that could have been realized had our Eastern connections furnished the requisite facilities for receiving and forwarding the freight with reasonable promptitude.

For five months of the year, and during the suspension of water communication, our freight traffic was subjected to a blockade at Toledo, continuous and unexampled, and which proved disastrous to shippers and paralyzing to all the business operations of the road.

During nearly all this period the daily average demand was equal to about three hundred cars, and toward this demand our eastern connections were only able to furnish a daily average of less than 90 cars. Under such crippling disabilities the storage capacity at Toledo, soon became exhausted, and the larger portion of our car equipment was employed for no better or more available purpose than as warehouses, thereby wholly

and effectually depriving the road of the means of realizing the advantages of the vast volume of business pressing at every station.

As a safe guard and protection against a future repetition of such disastrous experience, we look forward with encouragement to the opening into Toledo, during the approaching summer, of two additional lines of railway to eastern markets.

Another cause, that has depressed the freight earnings, has been the unprecedentedly low rates that prevailed during the summer months at all competing points, and which, to a considerable degree, prevented the maintenance of remunerative rates at local stations.

It is to be hoped that this senseless and ruinous competition, to which may be legitimately traced much of the prevalent animosity and bitterness against railway management existing in the west, will give place to a policy founded upon co-operation and mutual confidence, and such as shall enure to the advantage of all roads, and commend itself to the business public.

Repairs of track and renewals of worn out iron and ties were made on a large scale. During the year, 3,310 tons of new steel rails, and 8,774 tons of re-rolled iron were laid.

The masonry of the new iron bridges over the Manmee river, at Defiance, and Wild Cat river east of Lafayette, was, to a great extent, rebuilt. Several of the piers at the Wabash River Bridge at Attica, were also partially rebuilt. A substantial Howe Truss Bridge of 120 feet span, was built over the crossing of the Cincinnati, Wabash and Michigan Railroad, two miles east of Wabash Station.

Owing to continuous drouth for the past three years, the water supply of the road generally failed, particularly through Illinois, and rendered necessary a large outlay for additional wells, tanks, pumping apparatus, &c., amounting in the aggregate to $55,969 09.

BALANCE SHEET, December 31, 1872.

Swampscott Branch Railroad.

On the first of December last Mr. George W. Cram commenced the construction of a spur of the Eastern Railroad, extending from Swampscott to Marblehead, a distance of about four miles, and yesterday the road, which will be hereafter known as the Swampscott Branch Railroad, was opened to public travel. It is now thirty-four years since the Eastern Railroad Company, in response to the urgent demands of the then isolated fishing village of Marblehead, with its daring men, its frugal women, descendants of the early settlers who came from the Islands of Jersey and Guernsey in the English Channel, and withal its crooked streets, winding among the rocks, opened a branch line from Salem and brought this energetic community into closer relations with the city of which they had formed a part. As the town grew in population, business and influence, efforts were made to obtain a more direct line of communication with Boston, and in 1865 the General Court granted a charter to John F. Harris, Thomas Brown, Jonathan H. Orne and their associates, under the name of the "Marblehead and Lynn Railroad Company." Nothing was done in the matter until 1867, when, under authority of the Legislature, the town of Marblehead voted to aid the new road to the amount of $50,000. The enterprise still dragged, and it was not until certain property owners and capitalists, combining to make the sea shore of Swampscott, Phillips Beach and Marblehead Neck available as places of summer resort, that the road was located and the charter made over to the Eastern Railroad. This corporation has furnished the capital and built the road, under conditions which are no doubt satisfactory to the owners of building sites along the line, and to the people of Marblehead, whose interests will be largely subserved by the shortening of the route to Boston.

The new road leaves the trunk line a few feet east of the Swampscott station, and runs by a single track through a small ledge of rock west of Great Annisquam, over a trestle bridge 700 feet long and 35 feet high, through a rough and rocky sections to Phillips station, one and a half miles from Swampscott. Half a mile beyond is situated the Clifton House station, and half a mile beyond this point the Beach Bluffs station has been established. At each of these stations the depot buildings are in process of erection, and ample land for the use of the road has been secured. Just before entering upon the track of the old Marblehead branch the tracks form a triangle, where a single pole and switch-tender's house have been erected. The new line will shorten the distance between Marblehead and Boston by about three miles, and while the old line between Salem and Marblehead will still be operated, the citizens of the latter place will no longer be compelled to wait for Boston bound trains and change cars at Salem. The cost of the road will probably amount to $200,000, and it is expected to be a summer highway for pleasure travel for those who have residences on the line of the Swampscott shore, while it is sure to prove an invaluable aid to the fishing interests of Marblehead.—*Boston Journal, Oct.* 21.

Chicago and Northwestern Railway.

The directors of the Chicago and Northwestern Railway, in concluding their report for the year ending May 31, 1873, published in our last issue, say:

Already the indications of increased business, which could only compensate for the large expenditures of capital for the last three years, are encouraging. Since the close of the fiscal year embraced in this report, the returns show a gain of more than 52 per cent for the month of June in the earnings of the Winona and St. Peter, La Crosse, Trempeleau and Prescott, and Iowa Midland roads.

Independent of these, the earnings of the Chicago and North Western for the month of June, 1873, were	$1,309,578 57
Against June, 1872	1,070,459 86
Or a gain of	$239,118 71

Equal to 22.34 per cent.

For July, the earnings were	$1.240,987 76
Against July, 1872	1,029,957 73
Being a grain of	$211,030 03

Equal to 20¼ per cent.

☞ The earnings of the Missouri, Kansas and Texas Railroad for the six months ending July 31, 1873, were $1,755,732 20, the expenses $935,714 64, and the net earnings $820,017 56. Proportion of operating expenses to gross earnings, 53.29 per cent. Number of miles in operation, 785.

☞ Hon. Oden Bowie has been unanimously elected President of the Baltimore City Passenger Railway Company in place of Henry Tyson, who resigned to assume the Vice-Presidency of the Erie Railway Company.

[From the New Haven Union.]

Cheap Transportation.

Our old friend Horace H. Day, one of the most industrious, public spirited and intelligent citizens of this country, appeared before the Senate special committee on Cheap Transportation, at the Fifth Avenue Hotel, New York, last week, and gave his views of the International Policy proposed, touching the whole question, and also explained in detail his own plans for overcoming the great barrier at Niagara Falls.

Mr. Day has in the past almost impoverished himself in herculean efforts to open cheap water communication between the great west and the sea, in the northern route, and we remember years ago, to have heard sneers at his folly, from the thoughtless, while to-day the whole nation is exercised upon this question, as the great problem for the American people, necessary to the prosperity of all parts of the country, if not to the very life of the republic itself. This clear perception, followed by large outlays, (not less than one hundred thousand dollars, we have heard him say) proves his sagacity, not less than his devotion to the public good.

It will not escape notice that Mr. Day offers to insure the building of the Niagara ship canal, if the Government will donate to this company four millions of dollars, and agrees to complete the whole in two years, and if required sell the canal to the Government, any time within ten years for four millions more. Thus, for eight millions this Government can open up and possess this great water route, which is a mere bagatelle, when the advantages to be gained are considered. One month's saving from its construction would pay back to the people the whole amount. The completion of the Niagara ship canal would be worth five times the amount of its cost to New England alone, every year. We copy here from a report of his remarks before the senatorial committee, and invite special attention to the views presented. Mr. Day said:

It is known to this committee that I have for a long time identified myself with efforts to promote the Niagara Ship Canal, and I may say have in various ways expended more time and money than perhaps any other person in the country. I have long foreseen that there was no other way by which to meet the just demands of both East and West, and entirely agree with our present Chief Magistrate, whose repeated recommendations in respect to this and other great ways will stand the test of time, and if he can carry them through during his present term place the nation under even greater obligations for arresting greater calamities than was in the contest which overthrew Southern slavery. It is settled beyond all manner of doubt that water conveyances are the cheapest. All else has been tried in vain. The war drew the country together, but to-day sectional interests are again rising, and placing the nation in far greater danger than it was from the old systems and institution of the South. Monopolies and anarchies are the same; while the latter was confined to family and blood, the former is a wider spread power, and far more to be feared. It may be regarded as contagious; building up hatred, engendering malice and spite, which has already, and will more effectually resort to political strategy, to build up and extend its blighting influence far and wide, bearing down, depressing and impoverishing one part of the country, while it fosters and protects, through its injustice, another; shutting out man from his fellow man, turning back the rushing tide of God's great ocean of commerce, placing the iron hand of injustice on the mouths of the poor, and robbing the laborer of his hard-earned bread, compelling idleness to revel in the waste which monopoly creates, and obstinacy and tyranny hold, for the selfishness of the few who close the "rings" and make the "corners" upon and in which the nation's best interests are sacrificed, *ad libitum*, as they our lords and masters *will*. All else had been tried. Cotton was not and could not be king, and usurp the power in one half the nation; sugar, rice and tobacco claimed their part and portion in the channels of commerce, and all found a place and a way to reach us. Then came the louder call from all the world for bread, for corn and other food products, and what was the answer?

The politicians and monoplists saw that all the world must have what they asked for, and their opportunity was in the demand for bread. How have these monopolists and politicians expressed themselves? Their late actions and the result certainly speak plainer than I can. Credit Mobilier, and numerous others—lesser in the single, yet greater in the aggregate—certainly speaks for itself. All of these things, although passed away, have become the landmarks and foundation to enable us to make a more certain cord to bind us together as a nation—humane, wise and just, and, necessarily, prosperous. These great water-ways, to make cheap transportation sure, beyond the power of avarice to control, point the only safe way. At least three great avenues from the sea to the Mississippi valley should be undertaken now—one through the northern lakes, the St. Lawrence and Champlain to New York, one through Virginia, and one still further south.

The double track railroad, to be built and owned by the Government, and used by all who might wish to run their cars upon it would, of course be desirable, but ten such roads would fail of one great object—a steady foreign market for our surplus products. If this nation relies upon any kind of railroad, Canada, with British capital will perform the service cheaper by water through the St. Lawrence and Montreal, and to compete with this route, and keep the trade in the United States we will, after all, as I have said, be compelled to resort to the cheap water transportation. There is no shadow of a doubt of it in my mind. Looking to the absolute necessity of the Niagara Ship Canal, I have studied how to cheapen the cost of the structure, and shorten the time, and have arrived at a perfect system by which a ship of 1,200 tons can pass from navigable water above the falls to navigable water at Lewiston below the falls, within one hour, allowing fifteen minutes at the elevator, where one vessel would pass each way in the same time and by one operation.

By the aid of compressed air the entire work of excavation of the rocky bed of the canal on the line of the government survey, and by the shortest route, can be accomplished with great saving, as the falling water of the Niagara itself will furnish all the power to do the work, and if the United States is willing to donate $4,000,000 to a private company, I can furnish satisfactory assurance that a canal and elevator, capable of passing not less than fifty vessels of 1,200 tons' carrying capacity, each way, every twenty-four hours, can be completed in two years, and delivered to the government by the owners any time, within ten years, at less than $8,000,000. The elevator capacity can be increased at will to any desirable extent, even to passing 200,000 tons of merchandise a day, if so much should be required.

In order that it may be said that Mr. Day is not alone in his views, we reproduce some extracts from the remarks of Mr. E. H. Walker, statistican of the New York Produce Exchange, given before the same committee. Mr. Walker said:

There are two prominent competing routes in the future—one through the city of New York by the Erie canal, and the other by the St. Lawrence canal, and the city of New York must be prepared to meet the competition of the St. Lawrence route. The rate of freight now by that route is 10 cents a bushel from Chicago to Montreal, and when they come to have 1,200 ton ships, instead of the present class, they will reduce the cost below that, and the advantages of that route are as good as the other, including insurance.

Q. You assume that by the improved Welland canal and the St. Lawrence canal it will be carried below 10 cents? Yes.

Q. What is the relative value of the wheat shipped by water and by rail? A. I do not know that there is any difference; it brings the same price.

Q. I have seen a statement that there was 2 or 3 cents difference? A. There is sometimes on corn, and that grows out of the fact that the producer in the West garners his corn in open cribs, and shells it out full of moisture, and then when it is shipped in large bodies it is not always as good as when shipped in small parcels. Corn dried by this process in Chicago will bring as much or more by weight; there will be a diminution, sometimes, of two, three, four, or five pounds in a bushel, and there will also be a diminution in the measure, but not so great as in the weight. If the corn is in good condition it will by drying, done properly; but some of the dryers burn the corn.

Q. What is the object of drying the corn if it is in good condition? A. To prevent its being damaged.

Q. What is the cost of the drying process? A. I don't know what it is now. It used to be as high as 10 cents a bushel. I think now it is about 2 cents a bushel.

Q. Will you speak of the terminal facilities here, or will some other gentleman? A. I think probably some other gentleman had better tell you of those.

Q. Does the drying process injure the germinative properties of corn? A. If the heat is too great it does.

Q. Can you state anything more of interest? A. I can state in general terms this, that I look on this question of transportation as being the great problem now and for the remaining portion of this century. We are moving by all routes, north of the Ohio, of through freight about 33,000,000 tons per year, of which about 13,000,000 tons is properly through business. The rail rate from Chicago on fourth class freight, and from other terminal points of the west of like distance from New York, about $9 per ton; that is at the rate of 9 mills and a fraction per ton per mile.

The water rate for the last six years from Chicago to New York has been $7 and some cents for corn per ton and a fraction over $8 for wheat, and that is owing to the difference in the rate of toll. The rate by rail cannot be furnished cheaper than $9 per ton. If all the freight of the railway is carried at that rate; if the Central road should carry all its freight at three-fourths of a cent per ton per mile of its mileage of 1872 it could neither pay interest nor dividends. If it should carry all its freight at the rate of 12 cents a bushel for wheat, which is nine mills and a fraction per ton per mile, it could pay its interest and have about $200,000 to pay $8,000,000 of dividends with; so that practically unless there can be some means devised by which railroads can carry cheaper the people cannot get the relief they seek in the far West by rail routes. The lake route with large class vessels of say 2,000 tons capacity can be reduced to twelve shillings ($1 50) per ton from Chicago to Buffalo, and take the entire route through by water it can by proper appliances be reduced to $3. But in any event the rail will divide the business with the water lines. One-ninth of the tonnage of the railways is live stock and its products, and this is nearly one-sixth of the Eastern movement; and there are a large class of other commodities that will come by rail in any event. The lighter commodities will always come by rail, but the heavier classes will come by water. This business, which is now 13,000,000 of tons, before the end of the century will probably be swelled to 50,000,000 of tons. The population of the country from 1790 to 1860 has increased in the ratio of 3 per cent. During the war there was falling off of emigration, but computing it at the same ratio of increase, taking the population of 1870 as a basis, the population at the end of

the century will be 98,000,000, and in 1903 it will be 100,000,000. The production will be increased in a larger proportion than the population, so that the question to be considered for the next thirty years is the transportation of the production of 50,000,000 of people and the consumption of 50,000,000 more. New England and the Middle States take more grain than all our foreign exports. The grain is in the West, and the live stock nearly all of it must come where there is cheap corn and forage. Arrangements are being made for cargoes of animals through from Texas, and large quantities are being now brought from there all by rail. People are paying now by rail and water for the transportation of persons and property about $1,000,000 000 a year, and with the increase of population and the extension of railways and the wants of consumers and producers, beyond the end of the century that will be swelled to $2,500,000,000 a year, so that in the matter of dollars and cents the question assumes a greater magnitude than almost any other question that can come before the people. The remedy will be to cheapen water routes and in the extension of the railway system. The Central Railroad is now doubling its track; the Erie will be compelled to double its track as well as the Pennsylvania Central and Ohio. Another new road is projected, and we shall probably have six double-track railways within a very short period of time. That will give some relief in the item of cost. But we need the whole of them to move the business of the country, and we can hardly multiply them fast enough. Now in the far West it needs the product of three acres to transport one to market, and that is very oppressive to the producer and it makes the consumer in the East pay more for his bread. We are bringing into this State 45,000 000 bushels of grain more than we grow, and New England takes a larger amount. All of the New England States and Middle States take more grain than our entire foreign exports of the growth of the West. The canals, since 1837, have transported over $7,000,000,000 of personal property, and they have produced a revenue sufficient to pay for this without costing the people a mill. Under the constitution of 1846 provision was made to take $550,000 out of the canal revenues, and if those contributions from 1846 be taken up and the interest computed on them from the time they were taken, and the taxes on the amount be taken at the time they were imposed for canal purposes and interest computed on this, it will be found that the contributions with interest exceed the taxation with interest. So that the people of this State have had $7,000,000,000 of trade since 1837, from a canal system 900 miles in length that has paid for itself without costing them a dollar. The canal tonnage of this State for the last twenty-three years is more than double the entire foreign tonnage of all vessels entering the port of New York from foreign countries in American and foreign vessels, and it is two-thirds of the entire tonnage of all foreign vessels from all foreign countries entering all of the United States ports. The value of the commerce of the canals during the last twelve years is $870,000,000 more than the entire foreign exports of New York, so that when the question of competition comes up with the city of New York—the question of the diversion of this trade—why, the people of this city must be prepared to meet that competition, and if they hope to hold that trade they must adopt some policy, either by the improvement of railway communication or by cheaper water communication to accomplish the result. There will be greater facilities here in New York for the transfer of grain than there is now. I was shown, a few days since, a plan of an elevator with a capacity of over 1,000,000 bushels, which is to be built by a railroad coming into New York, and you may be sure that if one road builds such an elevator the others will have to. The present price of transfer from car to vessel is about 2½ cents per bushel; from boat to vessel it is about 1½ cents. It should be no more than ½ cent, and grain will doubtless be transferred for that sum. The necessities of the case are such that there must be a revolution shortly, in the manner of receiving or transferring freight. The railways during the summer season carry as cheap as they can afford to; their competition makes them do that. The price now on the canal is about two mills and a fraction per bushel per mile from Chicago to New York. It can be reduced with the enlargements, to a little over one mill.

Vermont and Canada Railroad.

At the annual meeting of the stockholders of the Vermont and Canada Railroad Company, held at White River Junction, Vt., on the 16th inst., the following gentlemen were elected directors: Bradley Barlow of St. Albans, Francis A. Brooks of Boston, J. N. A. Griswold of Newport, R. I., Romeo H. Hoyt of St. Albans, James R. Nichols of Haverhill, Mass., Edward A. Sowles of St. Albans, and Samuel Wells of Boston. There were votes representing 13,902 shares cast, all being for the Board which was chosen, except 45, being nearly a unanimous ballot.

Mr. Ellis introduced the following preamble and resolution which, after some discussion, was adopted:

Whereas, It has recently come to the knowledge of the stockholders of the Vermont and Canada Railroad Company that certain votes heretofore passed by the directors of this company have been passed, or procured to be passed, by the same persons, who were at the same time members of the Board of Recivers and Managers, and that said persons have hereby used their office as directors to enable them to carry out their plans or purposes to the detriment of the stockholders of this company, therefore

Resolved, That this company is not bound by any such acts or votes.

Mr. Todd, of Newburyport, offered the following resolution, which was also carried by a large majority:

Resolved, That the Directors be instructed to decline in future any proposals to guarantee the bonds of other roads or to sanction any leases whose rents are to be paid out of the earnings of the Vermont and Canada earnings, and if such guarantee or sanction has been given in the past by the Directors or a small minority of the stockholders, it was a sacrifice of the rights and interests of the road, and any Director shall use every proper means to withdraw from such guarantee or lease.

Mr. Nichols presented a resolution, which was passed, thanking the retiring Directors, Dr. J. R. Nichols and William Mixter of Boston, for their efficient services during the past year, after which the meeting adjourned.

The Steam Canal Boat Trial.

The result of the experiments in steam canal-boat navigation, as tested by the time made and coal consumed by the competing boats between Syracuse and Utica, being unsatisfactory to some of the contestants, a supplementary trial was determined on.

Accordingly Messrs. Geddes, Greene and Chapman took possession of the Baxter at 7.50 P. M. Thursday night at Utica. The Baxter's wheel commenced revolving in the weigh lock at 6.50 P. M. and at 7.10 yesterday morning she was at St. Johnsville, a distance of thirty-four miles. Engineer Greene took off his coat and saw to the coal business himself, remaining in the engine room all night. She was detained forty-nine minutes by boats and darkness and one hour in passing locks, which leaves her net running time ten hours and thirty-one minutes. She made three miles an hour and had six minutes to spare. She consumed for this thirty-four miles only 617 pounds of coal, which gives a fraction over eighteen pounds to the mile. As she was standing still nearly two hours, when she lost fuel, which however is included in the above result, showing beyond a shadow of doubt that the Baxter's account of herself between Syracuse and Utica had been correctly kept. Messrs. Geddes, Chapman and Greene are perfectly satisfied that the Baxter's record is a clean one.

The charge alone for towing a horse boat is thirty-five cents a mile! But the Baxter's power costs her just thirty cents less per mile, calling coal worth $5 00 per ton. In other words, the Baxter went twice as fast for only five cents a mile as a horse boat can go for thirty-five cents a mile.

Mr. Geddes has given his personal attention to every detail of the trial, and has collected facts and figures which will sustain him in any decision he may reach and which the Commission will find extremely valuable.—*Syracuse Standard.*

Chesapeake and Ohio Canal.

During the month of September 106,525 tons of coal passed over the canal, an increase of 15,961 tons over the same month of last year. The receipts for the month of September from all sources were $68 276 26, an increase over September 1872, of $11,402 84. The ordinary expenses for operating and maintaining the canal during the month, including the pay of officers, was $18,857 29. The revenue over expenses for the month being $49,418 97. There has been appropriated, since the first day of January last, to pay overdue coupons, the sum of $152,955, and to pay the principal and interest of the two outstanding repair bonds $2,712 88, making the total payments to these accounts since January 1, 1873, $155,667 88, leaving a balance in the treasury of the company on the 30th of September of $73,429 94, to which can be added the sum of $27,769 96, the uncollected revenue which will be collected in the next ten days. Total, $101,199 90, which will enable the board of directors without embarrassment to appropriate $50,985 to pay the coupon due July, 1858, on the preferred construction bonds. Notwithstanding the loss of nearly one month's revenues, about $50,000, caused by the suspension of trade on the canal by the damage done it by the floods of July and August, the receipts of the canal from January to September 30th of this year are only $10,101 less than during the same period of last year.

Concord and Claremont Railroad.

At a meeting held at Newport, N. H., on the 16th inst., of the stockholders of the Sugar River, Concord and Claremont, and Contoocook River Railroads, it was unanimously voted to unite all these roads under one corporation, under the name of the Concord and Claremont Railroad. This road now is seventy-two miles long, to wit: the Contoocook River road, fifteen miles from Hillsboro' Bridge to Contoocook; the Concord and Claremont, from Concord to Bradford, twenty-eight miles; and the Sugar River, from Bradford to Claremont Junction, twenty-nine miles.

It was also voted to issue five thousand shares of stock, the par value to be $100 per share; that each stockholder shall be allowed an amount of the capital stock equal to the amount of his stock in the Sugar River Railroad and instead of the same. The annual meeting is to be held at Concord, Oct. 31, for the choice of officers.

☞ Notice is given that the coupon of July, 1858, of Preferred Construction Bonds of the Chesapeake and Ohio Canal Company, will be paid at the banking house of Alexander Brown & Sons, Baltimore, on and after 25th inst.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

Asterisk (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An asterisk (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "†."

American Railroad Journal.

Saturday, October 25, 1873.

Stock Exchange and Money Market.

Some improvement has been noted in the financial situation. There has been a further increase in the amount of loanable funds available at this point, and lenders have shown a more accommodating disposition, though yet evincing extreme caution in the selection of collaterals. The city banks are stronger in their legal tender reserve item, though not reporting directly their gains, in this line. They are more liberal in their currency disbursements, and an early and general resumption of such payments is now confidently looked for. These circumstances are very favorably interpreted, and a more cheerful temper is apparent in business circles. Money is quoted at 7 per cent on call, as the rule, to the more prominent of the street houses. A readier sale is noted for choice grades of commercial paper within the range of 12@18 per cent per annum. The advices of an advance in the Bank of England rate to 7 per cent, and of the probability of a further rise, have more directly affected the course of Gold and Foreign Exchange. The domestic exchanges are working somewhat better than they were a week ago, but are yet far from being on a satisfactory basis, various rumors as to impending Government action in connection with the financial position were circulated toward the close, but were not deemed very reliable. Some of them were considered wholly improbable.

The cash balances in the Treasury on Tuesday were as follows: Currency, $3,215,239; special deposits of legal tenders for the redemption of certificates of deposit, $11,580,000; coin, $80,552,863. Coin certificates, outstanding, $29,147,400. Outstanding legal tenders, $359,866,188.

The U. S. Sub-Treasury, last week, reduced its currency balance $511,562, and added to its coin reserve $2,343,038. Its currency balance at the close of the week was $2,457,997; and its coin reserve $48,011,193.

Gold has been more active, and toward the close, stronger as to price, with some show of spirit and confidence in the speculative dealings, though the customs demand has been moderate, and the export drain unimportant. The extremes of the price have been 107⅝@108⅞, closing on Wednesday at 108½ as against 108¾ on Wednesday of the preceding week. The specie outflow, last week, was only $386,429. The imports of specie last week were $1,138,983, and since Jan. 1, $10,206,370, as against $[illegible]082,242 same time last year.

The customs demand for Gold last week, averaged $302,000 a day. The total customs revenue of the Government, in coin, at this port, since Jan. 1, 1873, has been $104,118,702, against $124,970,496 during the same time in 1872. Government has disbursed through the U. S. Sub-Treasury here, on account of the coin interest on the public debt, since January 1, 1873, $55,758,073, against $61,150,949 during the same time in 1872. The export drain of specie since January 1, 1873, has been $43,094,812 against $61,358,996 during the same portion of 1872.

Foreign Exchange has shown more firmness, with a better demand noted for prime bills, the offerings of which have been rather less extensive. Bankers' sixty day bills on London closed on Wednesday at 107@107¼; sight bills on London, at 108@108¼. The week's exports of Domestic Produce have been to the currency value of nearly 7½ millions.

Government securities have been more sought after on investment account, and though opening heavily were quoted much firmer in price toward the close. The offerings have been very moderate of all issues.

U. S. sixes of 1881 closed on Wednesday of this week at 112⅛@113; U. S. Five-Twenties of 1862, 106@106½; U. S. Five-Twenties of 1864 at 106½@107; U. S. Five-Twenties of 1865 107¾@108; U. S. Five-Twenties of 1865 consolidated 110@110¼; U. S. Five-Twenties of 1867, 112⅛@112¼; U. S. Five-Twenties of 1868, 112@112¼; U. S. Ten-forties at 105⅞@106⅛; U. S. Fives of 1881 (Funding Loan) 107¾@108; Six per cent. currency Sixes from 108½@109.

Business in Railway and Miscellaneous securities has been in very moderate request and irregular as to price.

State and Railway bonds have been comparatively dull, and values have been generally nominal and irregular. Central Pacific first mortgage six per cents closed at from 89@90.

The exports of cotton for the week increased 1,351 bales from New York and 8,619 bales from the Southern ports over the previous week. The receipts at the various ports also improved to 78,000 bales, but they are still behind last season owing to the Money panic and the fever at Memphis and other points. The total receipts since the beginning of the new crop year, Sept. 1, are 261,000, against 416,000 bales to date last year.

The import entries of foreign merchandise, at at New York, including dry goods amount for the past week to $4,918,000, as compared with $5,301,197 same week last year. The exports of domestic produce are $7,430,526, as against $5,866,824 last year. The exports of Gold and Silver $336,000, as against $719,988 last year. The customs in Gold deposited during the week in the New York Office of the Treasury amounted to $1,813,000, comparing with $2,746,000 same week last October.

General business has shown a fair degree of animation in the line of domestic produce, with prices of Breadstuffs, Cotton and Provisions closing more firmly; and of Live Stock about steady. Groceries irregular; Petroleum and Naval Stores weak. There has been some increase of demand for Metals, but at unsettled prices. Ingot Copper has been in better demand from manufacturers at rather lower prices. Sales have been 500,000 lbs., at 21c.@21½c. for Baltimore, and 24c.@24½c. for Lake. Lead has been sparingly dealt in, with ordinary foreign quoted at 7c., gold. Spelter has been quiet, at 7⅜c.@7⅝c., gold. Tin has been very quiet with sales in instances at concessions; 500 bxs. Coke Plates were sold at $8@$8 25 and 250 bxs. Charcoal do. at $9 75@$10, gold. The quotations are $9 75@$10 25 for I. C. Charcoal Plates; $9 50@$9 75 do. for Charcoal Terne; $8@$8 25 do. for I. C. Coke, and $7@$8 for Coke Terne. Pig-Tin has been dull; Straits, 29¾c.@30c., gold; English, 27c., do. Iron has been inactive, with cash buyers obtaining further concessions; Glengarnock, from yard, has been sold at $44@$45; Glengarnock quoted $42@$44; Eglinton, $41@$41 50; No. 1 American $40@$41; No. 2 do., $30@$35; New Rails at $62@$63, gold, for English, and $70@$75 for American. Ocean freights have been more active and much firmer, with the main call for accommodation for Grain Flour, Cotton, Petroleum, Rosin, Tobacco, and Staves.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Boston, Hartford and Erie 1st mort., 21; Gt. Western 1st mort., 1888, 89; Milwaukee and St. Paul 1st mort., LaC. div. 80; Ohio and Miss. 7s, consol., S. Canal open all Winter.

Increasing the facilities for canal transportation is fast becoming one of the great problems of the day. We have got to face it, and not only that, somebody must and will go to work and cypher it out.

Shall this State incur the enormous expense of enlarging her canals? Perhaps even that should be done, if no cheaper or better method of enlarging their capacity presented itself.

The State has already moved in the matter by offering a liberal prize for the solution of this question, and tests of some speculative schemes have recently been made; assuming that none of them will be found to answer, we are forced to look further, and, as we hope, fare better.

We have in our mind at this time, a practical system of steam towage, which, of our own knowledge, has stood the test of actual trial for several years, and which seems to us to be the only common sense plan of insuring success in this matter without much if any expense to the State. As to the plan in question, we may have more to say at another time.

But what we started out to say, or ask, was, can any method be devised whereby the system hinted at, or any other, for canal traverse, be enabled to operate all the year round? If so, the great transportation problem will have been solved.

To effect this, we observe that some ingenious, or at least inventive engineer has started the theory of laying hot water pipes the whole length

of the canal, and during the two months of freezing weather, these pipes are to be supplied with water from boilers, placed at suitable distances along the canal. The pipes being submerged a few inches, it is calculated the heat thus given off near the water's surface, will sufficiently warm its whole superficial area, as to prevent any accumulation of ice whatever, and thus permit of their being navigated all through the winter.

In these days of astonishing discoveries and inventions, we are not bold enough to declare anything impossible; therefore we say to the author of the hot water idea, go ahead—test your theory and establish its practicability, and we shall hail its application to the Erie canal as one of the greatest boons that can be conferred, not only upon the people of this State, but of the whole country.

Keep the canal free of ice and open all the year, and we think, indeed we are sure, the other half of the great question is already solved.

Is it Persecution or Patronage.?

We observe that a certain branch of the Government still keeps up a petty war on the Canal boats, by its most provoking and, as we believe, unlawful exaction of that everlasting tonnage tax.

The United States Courts have decided against the exaction, as unlawful, and why not therefore obey the mandate, and gracefully drop the subject.

These boats are mere floating tubs, propelled by hand or horse power, on artificial waters, and are in no legal sense, and certainly not by common sense, maratime craft at all.

Wherefore, then, these seizures of peoples' boats and other property, with a variety of vexatious proceedings, causing great delay and consequent loss to the owners? By and bye we shall see the Government mulcthed in suits at law, involving doubtless heavy damages.

As the matter presents itself to us, it certainly seems as if the canal men were entirely in the right in this controversy, and the Government not only in the wrong, but made the instrument of discouraging trade, and actually obstructing legtimate, internal commerce, by embarrassing the free navigation and working of the great canal arteries of the country.

Surely, some petty official or other, must have if not an axe, at least several little hatchets to grind in this matter. Who are those persons?

The Great Vapor Fuel Fight.

It is about this time, we believe, that the case should come off in the Supreme Court of the District of Columbia, between certain litigants, wherein is involved quite a large sum of money, obtained under Patents for alleged discoveries in the Vapor Fuel line.

The writer is prepared to say and maintain, that though the expected decision may settle all questions as to certain moneys obtained, yet, originality and priority of invention, even in the very matter before the court, must be looked for quite in another direction. On this subject, we have considerable to say at the proper time.

☞ The Swampscott Branch of the Eastern Railroad extending from the Swampscott station to the depot of the old Marblehead branch, was opened to public travel on the 20th inst,

Commerce of New York.

The foreign imports at New York for the month of September, 1872 and 1873, are officially stated as follows:

	1872.	1873.
Entered for consumpt'n,	$17,298,016	$15,552,471
Do. for warehousing	9,143,531	8,554,041
Free goods	7,849,413	5,666,223
Specie and bullion	2,088,045	876,261
Total entered at port...	$36,379,005	$30,648,996
Withdrawn fr. wareh'use	15,156,684	10,643,181

The foreign imports at New York for nine months from January 1, were:

	1872.	1873.
Entered for consumpt'n,	$159,292,057	$143,353,313
Do. for warehousing...	147,989,463	100,371,260
Free goods	37,998,958	67,960,217
Specie and bullion.....	5,002,483	3,901,492
Total entered at port...	$350,282,961	$315,586,282
Withdrawn fr. wareh'se	127,863,482	96,840,250

Revenue from customs at New York:

	1872.	1873.
In September...	$13,274,126 81	$10,959,722 11
8 months	100,409,026 92	85,013,531 93
Eight months...	$113,683,153 73	$95,973,254 04

The exports from New York to foreign ports in the month of September, were:

	1872.	1873.
Domestic produce	$18,950,574	$25,089,449
Foreign free goods	81,297	155,607
Do. dutiable.....	652,927	553,986
Specie and bullion	1,432,635	1,502,625
Total exports	$21,117,433	$27,301,667
Do. exclusive of specie.	19,684,798	25,799,042

The exports from New York to foreign ports for nine months from January 1, were:

	1872.	1873.
Domestic produce	$158,102,659	$206,756,640
Foreign free goods	1,147,343	1,618,167
Do. dutiable	7,418,010	6,877,128
Specie and bullion	58,382,370	41,559,101
Total exports.	$225,050,382	$256,811,036
Do. exclusive of specie.	166,668,012	215,251,935

☞ The report of the Commissioners of the Sinking Fund of Pennsylvania shows that there was a balance in the Treasury on October 1st of $1,707,658; that during September the debt was reduced by the redemption of loans $209,800, and that the whole debt of the State now is $25,871,716. On the 1st of December, 1872, the debt of the State was $27,303,594, so that during the last ten months there has been a reduction of $1,431,878. In the last four years and ten months the State debt has been reduced $6,941,824.

☞ Thornton K. Lothrop has been elected President and John L. Perry Clerk of the Wolfeborough Railroad Company. The directors are: Thornton K. Lothrop and R. T. Reed of Boston, George W. Burleigh of Great Falls, J. M. Brackett, Joseph L. Avery, Blake Folsom of Wolfeborough, J. W. Sanborn of Wakefield. The road is in a prosperous condition and shows a large increase of business over last year.

☞ A contract has been made for the extension of the Washington and Ohio Railroad to Winchester early next year. The work of building piers for the ferry between the Orange and Alexandria Railroad and the proposed East Alexandria Railroad, to connect with the Baltimore and Ohio Railroad, will be begun in a few days. The timber for the purpose has already arrived.

Portage Lake Ship Canal.

The Portage Lake Ship Canal is completed and open to navigation, and vessels have passed through. It avoids the necessity of rounding Keewenaw Point, Lake Superior. The canal is two miles and 1,300 feet long, 100 feet wide at the narrowest point, and at no place less than 14 feet of water, there being in fact 16 feet most of the way. The piers are each 1,000 feet long, extending into Lake Superior, and forming an excellent harbor. They are built of cribs 30 feet wide and filled in with stone, making a channel 250 feet wide. The sides of the canal are protected by sheet-piling, there being two rows of piles seven feet apart, the outer row having four inch plank behind it. This is to prevent the canal from filling up with sand from the sides. The work has been done under the superintendence of R. P. Mulick, Mr. J. H. Forster, being the State Engineer. It was finished by order of the United States Court, S. L. Smith being the Receiver. The cause of this was some complications between the contractors and the Portage Lake Canal Company. The completion of the canal shortens the navigation of Lake Superior 170 miles.

☞ The Philadelphia *Ledger* reports the total anthracite coal tonnage for the week ending October 11, at 479,043 tons, and for the coal year 15,820,627 tons, against 15,043,780 tons to corresponding time last year, being an increase of 776,847 tons. The bituminous tonnage for the week is 86,318 tons, and for the year 2,537,964 tons, giving a total of all kinds for the week of 565,364 tons, and for the year of 18,358,571 tons, against 17,231,940 to same time last year, being an increase of 1,126,651 tons.

☞ The shipments of Cumberland coal for the week ending October 11 amounted to 65,021 tons 7 cwt., an increase of 18,368 tons 12 cwt., compared with the corresponding week of last year. For the year to that date 2,000,703 tons 4 cwt. were shipped, showing an increase of 238,070 tons 12 cwt. over the same period in 1872.

☞ The Taunton Locomotive Manufacturing Company recently shipped four 26-ton locomotives for the Maronnas, Panda and Montevideo Railway Company. They are highly finished, have five-feet driving-wheels and cylinders 14 by 22 inches, nickel-plated. In packing them 125 cases were used, requiring 10,000 feet of lumber.

☞ The Bessemer department of the Bethlehem Iron Company, in Pennsylvania, which made its first blow on the 4th instant, has proved a success in every respect. The quality of the steel is excellent, and the whole progress of converstion from cupola to ingot satisfactory in every respect.

☞ Wm. H. Aspinwall, Adam Norrie, Warren Delano, William Whitewright, Jr., and Henry A. Mott, bave been elected directors of the Cumberland and Pennsylvania Railroad.

☞ The estimated earnings of the Kansas Pacific Railway for the week ending Oct. 8, are: freight, $79,219 45; passengers, $37,093 23—total, $116,312 68.

☞ The earnings of the Erie Railway Company for the week ending Oct. 7, 1873, were $429,481—an increase over the corresponding period of the previous year of $25,622.

Statistics of Commerce and Navigation.

From the official synopsis of the Report of the Bureau of Statistics we learn that the imports into the United States for the year ended June 30, 1872, amounted to $640,338,766; domestic exports (specie values) for the same period, $501,285,371; foreign exports, $22,769,749. For the twelve months ended June 30, 1873, the imports amounted $663,410,597; domestic exports, (specie values) $578,938,985; foreign exports, $28,148,481. In 1872 the imports consisted of $626,595,077 worth of merchandise and $13,743,689 in specie and bullion. The domestic exports (specie values) for the same period were—merchandise, $428,487,131; specie, $72,798,240; foreign exports—merchandise, $15,690,455; specie, $7,079,294. In 1873, the imports were: merchandise, $641,929,660; specie, $21,480,937, domestic exports (specie values)—merchandise, $505,033,489; specie, $73,905,546; foreign exports—merchandise, $17,445,453; specie, $10,703,028.

The value of foreign commodities remaining in warehouse June 30, 1872, was $122,211,266 as compared with $77,646,579 June 30, 1873.

Making allowance for the difference in the warehouse accounts, the imports for the fiscal year ended June 30, 1873, are in excess of the domestic and foreign exports combined, in the sum of $100,887,818, while for the same period of 1872 the excess of imports over exports was only $62,397,039.

The values of the imports and exports carried in American and foreign vessels and in cars and other land vehicles, respectively, during the twelve months ended June 30, 1872 and 1873, were as follows:

FISCAL YEAR ENDED JUNE 30, 1872.

Vessels.	Imports.	Domestic exports (mixed values.)	Foreign exports.
American	$177,286,302	$161,310,869	$6,722,462
Foreign	445,416,783	381,620,692	12,311,355
Land vehicles	17,635,651	6,279,157	3,735,932

FISCAL YEAR ENDED JUNE 30, 1873.

Vessels.	Imports.	Domestic exports (mixed values.)	Foreign exports.
American	$174,536,454	$163,110,634	$8,455,094
Foreign	471,803,595	478,236,854	16,679,032
Land vehicles	17,070,548	7,785,075	3,014,355

A comparison of the above table shows that during the year ended June 30, 1873, more than 73 per cent of the total trade by water was in foreign vessels, and for the corresponding period of 1872 the value of articles carried in foreign vessels was about 76 per cent.

The number and tonnage of vessels engaged in the foreign trade which entered into and cleared from the United States during the fiscal year ended June 30, 1872, were as follows.

Vessels.	Entered. No.	Entered. Tons.	Cleared. No.	Cleared. Tons.
American	10,624	3,711,846	10,492	3,682,309
Foreign	18,657	8,094,577	18,759	7,051,425
Total	29,281	10,806,423	29,251	10,733,734

FISCAL YEAR ENDED JUNE 30, 1873.

Vessels.	Entered. No.	Entered. Tons.	Cleared. No.	Cleared. Tons.
American	11,266	3,612,631	11,559	3,756,564
Foreign	20,379	8,083,087	20,493	8,065,131
Total	31,645	11,695,718	32,052	11,821,695

The arrivals of emigrants from Great Britain and Germany for the year ending June 30, 1873, amounted to 316,514, against 294,735 for the previous year—a gain of 21,779. The following are the official figures for 1873: From England, 74,818; from Ireland, 77,344; from Scotland, 13,841; from Wales, 840—total from Great Britain, 166,843; from Germany, 149,671. Appended is the report of immigration from the above countries for the last fiscal year by quarters: First quarter ended September 30, 1872, from Great Britain, 42,696; from Germany, 36,039; second quarter, ended December 31, 1872, from Great Britain, 26,907; from Germany, 37,633; third quarter, ended March 31, 1873, from Great Britain, 15,920; from Germany, 14,842; fourth quarter, ended June 30, 1873, from Great Britain, 81,320; from Germany, 61,157. Total for 1873 from Great Britain, 166,843; total from Germany, 149,671.

Fuel Economy—Heated Air in Combination with Steam.

The railways of the United Kingdom consume about 5,000,000 tons of coal a year. It is estimated that the invention of the use of heated air in combination with steam saves 12½ per cent of fuel. This being so, the application of this improvement would save upwards of 600 000 tons of coal per annum, and as coal now costs railway companies on the average perhaps full 20s. a ton, here would be a saving to our railway companies of £600,000 a year. The whole of the railway passenger duty comes to £400,000 a year. The coal economy referred to would effect a saving to railway companies 50 per cent greater than the total abolition of the passenger duty, about which we have heard so much in late times. The question of the coal saving is therefore a matter of importance.

Mr. Richard Eaton, of North Mimms Park, Hatfield, read last week a paper before the Mechanical Section of the British Association for the Advancement of Science at Bradford (Mr. W. H. Barlow, C. E., in the chair) as to further results obtained from the use of heated air with steam, and from this paper we make the following extracts, the public importance of the question being our excuse for the occupation of so much of our space:—

"In the case of the locomotive named, an air-pump, single acting, driven from one of the main cross-heads, and secured to the frame work of the engine, in the place originally occupied by the feed-pump, conveys a continuous supply of air, taken from the atmosphere, in its natural state, through a coil of pipes, fixed in the smoke-box, into the boiler, at an average temperature of about 650 deg. Fahr. Within the boiler the heated air is distributed, and is continually rising, scattering the cohesion of the molecules of water, increasing the heating surface, promoting ebullition, joining the steam on its passage to the cylinder, and there greatly aiding the energy of the steam by retarding condensation, and following a higher curve of expansion. The action of the heated air also prevents a permanent settlement of incrustation on the boiler, fire-box, or tubes, entirely abvia es priming, and diminishes the liability to explosion. The duration of boiler, tubes, and fire-box is prolonged by the non-deposit of scale, and steam is more quickly generated and more easily kept up. A considerable economy of fuel has been produced, as shown by the following facts, drawn from official sources exclusively, and amply verified. This locomotive, No. 369, has been working goods traffic mainly, and the following table shows her train mileage and fuel consumption for two periods of twelve months respectively, the one before, and the other after, the addition of the hot air system. It is a subject for regret that the exact load drawn by each engine cannot be given, but this is simply impossible, without immense labor and interference with business. Every reasonable facility for arriving at the truth has been cheerfully accorded by the officials, superior and subordinate. During the twenty-one months use of the air system in No. 369, in which period she has done very heavy work, a remarkable freedom from leakage, attributed to the absence of scale, has been observed. The little trouble given by the engine generally, has often been referred to, and the books of the company prove that the "running shed" expenses of No. 369 have been the lowest of the six engines working together. She still has the tubes in work that were first inserted at her construction, bearing date January, 1868. Locomotive No. 38 is a sister engine to No. 369 in all respects, excepting the air apparatus, and during the twelve months referred to has been over the same district, and drawing the light loads, as No. 369, so far as it has been possible to assimilate them in the ordinary working routine. Their fuel consumption also is given by way of contrast. No allowance is made for the detentions, which are long and frequent.

	Engines.	Engine miles run.	Coal consumed. Tons cwts.	Av. lbs. per mile.
1871	No. 369 In steam and air.	21,048	003 6	42.92
1872-'3	No. 369 In steam.	27,934	472 1Q	37.89
1872-'3	No. 38	28,053	550 10	43.95

As there are six engines constantly employed on the Liverpool and Normanton goods service, and each takes its varied turn per week, so as to make the duty alike to all, a six weeks' comparison is given. Although the power of four of the six exceeds that of the other two, the loads are stated to have been as equal, in practice, as they could well be made.

Six weeks ending July 3rd, 1873;—

Engines.	Diameter of cylinder.	Engine miles run.	Coal consumed. Tons. cwts.	Average lbs. per mile.
369	15 in.	4 477	65 5	32.64
Steam and air.				
38	15 in.	3,987	74 0	41.57
Steam.				
329	16 in.	4,700	84 15	40.39
381	17 in.	4,353	74 15	38.47
383	17 in.	4,698	75 15	36.11
391	17 in.	4,310	77 5	40.15
Total		26,525	451 15	

An analysis of the above figures shows:

	lbs. per mile.
Average fuel consumption, No. 369	32.64
Do. do. of the six engines	38.15
Do. do. of the five, excluding No. 369	39.26

	Tons	cwt.	qrs.	lbs.
No. 369 consumed on 3,987 miles of her work, 32.64 lbs. per mile	58	1	3	19
No. 38 consumed on like mileage	74	0	0	0

No. 369 ran 4,447, the other five ran 22,048 miles. Assuming that loads were equal, on an average, as it is believed was the case, the other five engines would have consumed, in the six weeks, on their 22,048 miles, if calculated on the basis of—

	Tons	cwt.	qrs.	lbs.
No. 369, 32.64 per mile	324	5	1	18
As against actual consumption.	386	10	0	0
Extra consumption of five engines	65	4	2	10
Or, per engine per week	2	3	1	26

The injector is used constantly on No. 369, and the mode of working the air apparatus is learned, by any driver, of ordinary intelligence, in a few minutes. It is self evident that the atmosphere of tunnels must be improved in proportion to a diminished fuel consumption and the value of the use of compressed air, in improving ventilation, has been abundantly established in collieries where coal cutting machinery is worked on that princi-

ple." * * "The Directors of the Lancashire and Yorkshire railway have given practical aid to the thorough investigation of the principle by placing No. 869 at the service of the Institution of Mechanical Engineers in 1872, and of the British Association on the present occasion. It is hoped that the opportunity accorded may be taken advantage of, in the cause of science and progress, and in the study of the momentous question of 'fuel economy.' "—*Herapath.*

Our Future Wealth.

That our country is eventually to take the lead in wealth must be plain to any one who fairly estimates the immensity of her undeveloped resources.

Since steam has been applied to commerce and manufactures, the productive coal-fields of Great Britain have been her chief source of strength. These coal fields have been worked for a great number of years, and many of them show symptoms of exhaustion. They are, moreover, insignificant in extent as compared with what this country possesses. The aggregate area of the coal-fields of Great Britain and Ireland is, at most, but 12,000 square miles, while that of the United States is at least 196,000 square miles. The coal area of Canada, mostly in Nova Scotia, is put down at 13,000 square miles.

If the quantity of coal in each given square acre be about the same, then Nova Scotia is richer in coal than Great Britain ever was, and the United States is more than sixteen times as rich. In fact, according to elaborate estimates made by Professor Rogers, the whole of Europe contains but one-twelfth the quantity of coal which exists in this country. The present avaliable quantity in the British Islands is estimated at 190,000 millions of tons, while that of France and Belgium is set down at 95,000 millions.

These facts shows—if coal be a synonym of wealth and power—that the United States will be rich and powerful when the great countries of Europe have passed into decadency, and the future New Zealander, sitting on a broken arch of London bridge, muses on the ruins of St. Paul.

Coal and iron go together. One is, as it were, a factor to the other; without iron coal would lose a large portion of its value; without coal ore would be comparatively worthless. Though unlike they are still nearly related in their range of uses. The iron engine is rendered serviceable through the power which coal supplies, and the iron horse and iron ships are propelled through the force which it develops.

In England, the production of iron—consequent upon the increasing difficulty and cost of producing—is every year becoming more and more expensive. Dear coal in England as well as in every other country, means dear iron, and with dear iron England cannot long maintain her present admitted preeminence in manufactures and the support of a commercial marine.

The rich distribution of iron ores in close proximity to all our great coal measures is a prophetic indication of our future wealth. All history shows that wealth and population gravitate toward centres enriched by the valued presence of coal and iron. No other country is as well supplied as the United States in these twin agencies of wealth, power and population, consequently, no other country will be as wealthy, as populous and as powerful.

Our largest coal-fields is that known as the "Great Appalachian." Passing through Western Virginia, Eastern Kentucky, and Eastern Tennessee, it terminates in Alabama, where it makes its nearest approach to gulf or ocean waters. As yet this great field is comparatively untouched; but it is now attracting attention, and several blast furnaces for the production of iron have already been established, not only on the line of the Chesapeake and Ohio Railroad, but in Alabama, toward the field's most southern extremity.

When the South is supplied with transportation facilities equal to those now existing in Pennsylvania, the coal and iron trade of Alabama will be a power in this southern land, greatly exceeding that which the coal and iron of the Keystone State are to-day in the land of Penn. The field is in every respect an inviting one. With a genial, healthy climate, generous soil, and unparalleled facilities for the production of iron and other valuable minerals, Alabama must soon command the attention she deserves. New Birminghams and Sheffields will soon spring up within her borders, and new Manchesters, also, for she has all the raw material at command which has built up England's great textile city.

We look forward hopefully to the time when Alabama shall be linked to us by new ties—industrial, social, and commercial—and the whole South shall rejoice at the fullness of her prosperity.—*New Orleans Times.*

Krupp's Cast Steel Works.

The establishment was founded near Essen, in Rhenish-Prussia, in the year 1810. It was conducted by Mr. Alfred Krupp from the year 1820, and in 1848 he became sole proprietor. The works have been gradually developed, until, in January of the present year, they cover a continuous area of about 1,000 acres, of which almost 200 acres are under roof. The total number of men employed in these works, and in the mines and smelting works belonging to the firm, is about 17,000, besides 789 officers and regular employes.

The quantity of cast steel produced in the year 1872 exceeded 125,000 tons. This product consisted of axles, tires, wheels and crossings for railways, rails, springs, and shafts for steamers, machinery of various kinds, boiler-plates, rolls, spring steel, tool steel, guns, gun-carriages, shot, etc. There are in the works now in operation 250 smelting furnaces, 390 annealing furnaces, 161 heating furnaces, 115 welding and puddling furnaces, 14 cupola and reverberatory furnaces, 160 furnaces of other kinds, 275 coke ovens, 264 smiths' forges, 240 steam boilers, besides 70 now in process of construction.

There are, besides this, 71 steam hammers, 286 steam engines, 862 turning lathes, 82 shaping machines, 195 boring machines, 107 planing machines, 42 punching and grooving machines, 32 pressing machines, 63 grinding machines, 31 glazing and polishing machines, and 142 machines of a miscellaneous character.

In 1872 these works consumed, of coal, 500,000 tons; of coke, 125,000; of water, 113,000,000 cubic feet; of gas, 155,000,000 cubic feet, supplied by the gas works of the establishment to 16,500 burners.

To facilitate traffic at the works there are 24 miles of railroad track, of the usual gauge, with 180 sidings and 89 turn-tables, on which run 12 tank locomotives, cylinders 16 inches in diameter, and 530 cars. Six more locomotives are now in process of construction. Ten miles of narrow gauge track (30 inches), with 147 sidings and 65 turn-tables, are also in use. On this track run three locomotives (cylinders six inches in diameter) and 270 cars. Four locomotives of the latter size are now being constructed. Horses are also used on the narrow gauge road. In the carting department there are 191 horses, 272 carts. Communication between the several workshops is established by 30 telegraph stations. A corps of 166 watchmen and a permanent fire brigade of 70 men who also perform police duty, are constantly employed. General supply stores, under control of the firm, supply to the voluntary purchaser belonging to the works, for cash, provisions, clothing dry-goods, boots, &c., at cost prices. The present monthly receipts of these stores amount to about $55,000 in gold, and are continually increasing. This department comprises one hotel, three beer-houses, one seltzer water manufactory, one flour mill, and one bakery, with two steam engines.

The officers inhabit 266 dwellings. A portion of the workmen are housed in 2,948, either inhabited or in course of construction. There are also boarding houses for the unmarried workmen. A hospital containing 100 beds, and one epidemic hospital with 120 beds, are placed under the supervision of physicians especially engaged for the purpose, and afford ample provision for the sick. A sick, burial and pension fund has also been instituted for all the workmen, the firm contributing to the fund half as much as the workmen, and providing pensions and support for those who have been rendered unfit for work, and for the widows of the workmen. The total receipts of this fund for the year 1872 were $80,000; the expenditures were $62,500 and the fund in hand at the beginning of 1873 was $97,400, gold. From another fund members receive for their families free medical treatment on paying 75 cents annually.

The firm has also organized a chemical laboratory, a photographic and lithographic atelier, and a printing and book binding establishment. In the printing office there are two steam and four hand presses in operation.

The five different smelting furnaces belonging to the firm produce, with eleven blasting furnaces, nearly 10,000 tons of pig iron per month. They have 140 coke ovens in operation, and 120 in the course of construction. The steam engines employed in them represent together nearly 10,000 horse power.

The Mississippi River Bridge.

The commission of United States engineers appointed by the War Department to examine and ascertain whether the bridge now in process of construction across the Mississippi river, at St. Louis, will, when finished, obstruct navigation, have made an elaborate report. They find that the bridge, as at present designed, will prove a very serious obstruction to navigation, and as it is impracticable to change the plan of the bridge or raise it, except at enormous expense, they recommend a canal or open cut behind the eastern abutment of the bridge, one hundred and twenty-five feet wide, extending from a point five hundred feet above the bridge to three hundred feet below it, with a draw of the same width. They also recommend that arch trusses like those of this bridge be in future prohibited in plans for bridges over navigable streams.

☞ The Union Pacific Railroad Company sold during the month of September, 1873, 20,230 51-100 acres of land, at an average price of $6 27 6-19 per acre, amounting to $126,970 86. Sales averaged 121 86-100 acres to each purchaser. Total sales to Oct. 1, 1873, 799,748 73 100 acres at an average price of $4 50 per acre, amounting to $3,595,460 63.

☞ The Boston Water Power Company have within a few days mortgaged their lands and flats west of Parker street and in the full basin to Mr. Nathan Matthews, to secure him for his indorsements of the notes of the company. The previous mortgage debt of the company is about $1,000,000 and the floating debt about $800,000.

☞ Work upon the Lancaster (Mass.) Railroad has been resumed. About one and a half miles of track are yet to be laid.

☞ Mr. John S. Farlow has been chosen President of the Cincinnati, Sandusky and Cleveland Railroad Company.

☞ This week all the new connections of the Washington street railways will be completed, and both the Metropolitan and the avenue cars will run over permanent routes. The Metropolitan cars will reach the capitol by the south gate, and the avenue cars by the north gate. The Metropolitan line will connect at Rhode Island avenue and Ninth street with the Silver Spring road.

☞ The directors of the Cincinnati and Baltimore Railway Company have filed with the Secretary of State the papers necessary to enable them to build the Storrs branch, from the Eighth Street intersection, Cincinnati, to the yards of the Ohio and Mississippi Railway Company.

LANSDELL'S

Patent Portable Railway Syphon.

The Portable is invaluable on a freight or construction train, being used to take water at points where there are no water stations. With it water can be taken from any point within one hundred feet of the track where there is water six inches or more in depth. The valve C is tapped into the locomotive boiler; steam is let on through the hose B; water is drawn through the orifices D D, and forced through the hose E into the tender, filling any tender with warm water in from six to twelve minutes.

Lansdell's Patent Steam Syphons, Double Suction, adopted by the United States Board of Supervisors, and approved by the Secretary of the Treasury for use on Steamboats.

For Price and particulars, apply to the General Agents of the Steam Water Station Company,

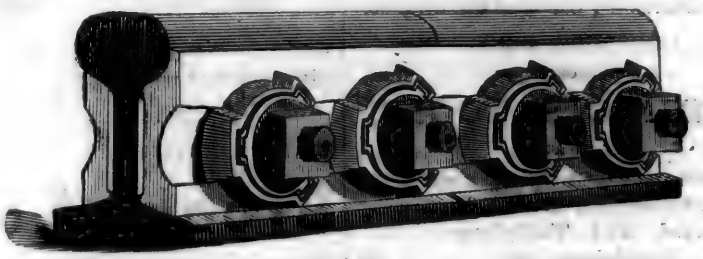
THE LOCK-NUT & BOLT COMPANY OF NEW YORK,

No. 61 Broadway, New York.

Manufacturers of all kinds of **BOLTS** for FISH-BARS, BRIDGES, CARS, MACHINERY, &c., with the "CUMMING NUT-LOCK," the only method of locking a nut to the bolt.

PATENTED June 16, 1868.

IMPROVED August 23, 1870.



Unequalled for Cheapness, Simplicity and Effectiveness.

DESCRIPTION.—A pointed copper key is placed in a groove cut in the threaded part of the bolt, *over which* the nut is screwed to its position, cutting its own thread in the copper, thereby taking up all the slack between the bolt and the nut. By riveting up against the face of the nut the projecting portion of the copper key, the nut is firmly locked in its position, but can be readily adjusted or removed with a wrench without injury to either bolt or nut.

Severely tested for over *four years*, they have *never failed*, and are *now in use on over fifty Railroads*, giving perfect satisfaction. We solicit a trial *anywhere*.

Licenses Granted to R. R. Companies, Car Builders and others.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,

IRON AND STEEL MANUFACTURERS,

No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

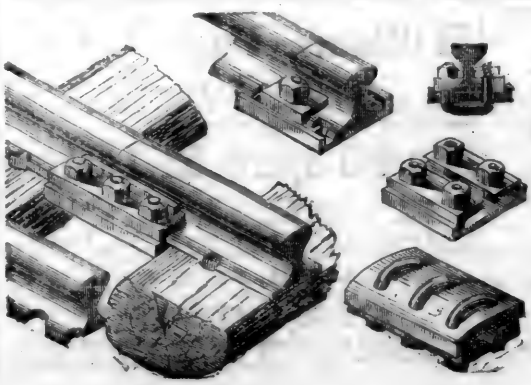
The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.



That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

FISHER'S PATENT

Wrought Iron

RAIL JOINTS,

MADE BY

FISHER & NORRIS,

TRENTON, N. J.

The Superiority of these Joints has been proved by eight years' use on different Roads.

Brown's Metallic Window and Door Bands.

Winter is coming with its snow, its hail and frost accompanied with all their manifold discomforts. Even now the Autumn winds whistle most ominously around our dwellings, searching here and there in every nook and corner for some unguarded place or open crevice, that they may enter and dispel or chill the elsewise genial atmosphere of our rooms.

As everybody knows the windows and doors of our very best made houses, shrink and warp to such an extent that cold cross-draughts of air are continually pouring in, night and day, and this, too, around each one of the 30 or 50 doors and windows perhaps of your house.

Who has not felt a chill on going near a window or the outer door on a cold day? These draughts, good reader, are, far more than you are aware, the foes of your health, the insidious, unseen agents that bring in their train tic-doloreaux, rheumatism, neuralgia, acute toothache, and continual colds, which as everybody knows, are the fruitful source of fevers, consumption, and thousand other maladies, but little less terrible.

Now all these evils can be avoided, the pleasant warmth of your rooms retained, and blustering old Boreas kept on the outside where he belongs. How? Why, simply by the use of BROWN'S METALLIC WEATHER STRIPS, or Bands, around your doors and windows. They will do it effectually, keeping out dust and noise in summer as well, besides preventing all disagreeable rattling of the windows. Being made of the best vulcanized rubber, firmly held by metal fastenings, these ingenious contrivances can readily be adapted to any sort of place or crevice, and unlike wood require no nails or screws to fasten, and cannot break or split. They will evidently last a great number of years. We have heard of some already in use ten years, and are good yet, fulfilling the promise of the inventor in every respect. These strips can as readily be applied to the shallowest crevice, as to a deep opening, and once on need no replacing or repairing.

Of course we favor fresh air and ventilation; but let us have it at proper times and places, not anyhow and everyhow, about our windows and doors without any regulation as at present.

People desiring warm comfortable houses this winter, and wishing to keep out of the family circle, not only cold blasts but the ills of life we have alluded to, should lose no time in availing themselves of the ingenious, economical little device referred to.

The Patent Metallic Weather Strip Company, as we learn from their notice in another column, are located at 812 Broadway, and are prepared to execute orders with dispatch, and guarantee satisfaction in all cases.

Philadelphia and Reading Railroad.

The Philadelphia *Ledger* states that a cable telegram was received in that city from London on Saturday last announcing that the new ten million 6 per cent gold bearing loan of the Philadelphia and Reading Railroad Company, put on the market by McCalmont Brothers, London, on the previous Wednesday, was a complete success, and that subscriptions would be closed on the following Monday. By this it appears that during the first three days more than enough applications were received to exhaust the entire issue. This is especially satisfactory to the Reading, and will be esteemed good news by all borrowing companies of good credit, as it shows that the foreign money markets are not closed to all American enterprises, but that capitalists there, as here, discriminate between the good and bad borrowers. This ten millions mortgage loan of the Reading runs for twenty-four years, is in dollar or sterling bonds, interest payable semi-annually in gold, and is protected by a cumulative sinking fund of two per cent per annum, by yearly drawings in London. That so large a loan should be taken so promptly would at any time be most gratifying, but at such a time as this, in the face of failures here in which foreign capitalists are supposed to have suffered heavily, such a success as has attended the Reading's new loan is especially flattering.

Proctor's Spark Arrester.

Travelers by rail will rejoice to know that a remedy has been at last provided against the annoyance and discomfort of flying cinders. Nearly two years ago a patent was obtained for "Proctor's Spark Arrester," and since then the inventor has continued to experiment until he has produced a very satisfactory contrivance. The first perfected "arrester" was tried a short while since on the Boston and Maine Railroad, and gave most satisfactory results.

The invention consists, in brief, of a peculiar shaped smoke-stack, which may be described as a crooked cone, curving back towards the cab after leaving the boiler, and then curving again so as to point perpendicularly at the top, which is covered with a double fine wire netting similar to that in other stacks. At the back of the interior is a passage-way connecting with a four inch pipe, which runs outside the boiler and down into a large sheet-iron "pan" or box underneath. From the peculiar construction of the cone the smoke and cinders are carried through the stack on a sort curved line, which passes them by the wire netting at the top (through which the smoke escapes) to the opening of the tube at the back, down which the cinders are dropped and deposited into the pan below.

During a trial run of 24 hours, the "arrester" detained nearly nine bushels of cinders, as was proved by actual measurement of the contents of the pan. After such a result as this we wish more heartily than ever for the success of the invention. We never realized before what it was to ride behind a cinder-scattering locomotive. Just think of it, a bushel of dirt and firebrands to be encountered every five minutes. It is no wonder that our eyes are burned, our complexion spoiled, and our linen ruined. We are happy to state that there are good prospects of relief. The "arrest-

er" is said to so commend itself that a half dozen have already been ordered for the Boston and Lowell Railroad, and unless the people up North have been much deceived we may hope to soon enjoy the new blessing on all routes that have any regard for the comfort of passengers.

New York, Providence and Boston Railroad.

The business of this company for the years ending August 31, 1872 and 1873, has been as follows:

		272,825 00
Surplus		$110,494 95

Compared with the previous year the receipts of 1873 show an increase of $22,610 56, with an increase in expenditures of $41,404 70, making a decrease in net receipts of $18,594 14. The president in his report says:

The receipts of the present year are $22,611 in excess of the previous year, although the latter included an item of $15,580 paid by the Merchants' Navigation and Transportation Co. in settlement of an old claim, and a further sum of $7,879 collected from the Fall River Line. We have not yet obtained a settlement with the last named parties for the amount due us, which is estimated at $7,000.

Owing to the severity of the past winter, and the increased number of trains run over the road, the expenses have been about $40,000 greater than last year, and the repairs have been unprecedentedly large. 27,614 new ties, and 1 117 tons of rails, have been laid on the old track; 6,742 rails have been repaired and relaid.

New truss bridges on the Howe plan have been constructed at five different points aggregating in length 344 feet; several smaller bridges have been built over highways, and other bridges have received requisite repairs.

The station houses and platforms have been repaired or renewed, at an increased outlay over last year of about $18,000. The substitution of yellow pine for spruce in the platforms involved the greater part of the difference, and will materially reduce the future outlay for such work.

The second track from Wickford to Kingston, 7 miles, was completed in August, and for about half the distance steel rails, 64 lbs. to the yard, were used. Grading for track between Stonington and Westerly, 5 miles, will soon be finished. It is intended before next spring to widen the track between the last-named place and Kingston, 17¼ miles, so that by the 1st of May, 1874, the road will be double-tracked the entire distance from Stonington to Providence. Two cargoes, about 2,000 tons, of extra quality English rails, 60 lbs. to the yard, have been received at Stonington direct from Great Britain for this work. Only about 500 tons will be required for its completion.

Large and commodious station houses have been built at Westerly, Greenwich, Wickford, and Auburn, to accommodate the increasing business of the road. The average cost of them is about $8,000 each. Freight sheds have been constructed at Providence, Westerly and Wickford.

Extensive repairs have been made on the old steamboat dock at Stonington, and a passenger shed with extensive platforms erected thereon. The bulkhead attached to the old wharf has been continued south about 250 feet, to connect with land purchased a year ago. To deepen the water on both sides of the wharf, a considerable amount of dredging has been done, and the material thus obtained is being used in filling in the bulkhead, thus affording valuable room for future requirements.

We regret to report the occurrence, on the 19th of April last, of the first disaster of a very serious character which has ever taken place in the history of the company, by which seven persons were killed, and twelve received injuries more or less serious. The accident was caused by the breaking away of a mill dam about eighty yards from the track of the road, and the subsequent carrying away of a bridge less than 20 feet long, and which only a few hours before the disaster appeared to be in a safe condition. We have no hesitation in expressing the opinion, that the unfortunate event was not the result of any negligence on the part of the superintendent or of any of his subordinates, and we are sustained in this conclusion by the report of the Commissioners of Railroads made to the General Assembly of Rhode Island in May last. The engineer and fireman of the ill-fated train sacrificed their lives at their posts of duty, and some provision has been made for the family of the former and the father of the latter.

Considerable outlay has been made on our two ferry boats, and both are now in good order. The old boat can either be kept as a spare boat or disposed of at about $15,000.

The cost of repairing the locomotive and replacing cars destroyed at Richmond Switch, and other expenses involved, have amounted to about $26,000.

Of the six per cent bonds due first of August, $49,000 have been paid, leaving $7,000 outstanding, to be paid on presentation.

The capital stock has been increased to $2,500,000. An instalment of 20 per cent of the additional stock was paid in July, and the remaining 80 per cent is payable on the first of October. When collected, the company will have available for future construction $452 140, besides $140 000 to be realized from balance of bonds due in 1899, after putting aside $83,000 of said bonds to retire the outstanding 6 per cent bonds due in 1878 and 1878.

The number of miles run is 452,147, at a cost of 18.637 cents per mile for fuel. 656,551 passengers have been carried over the road, without loss of life or serious accident, except in the case of the Richmond Switch disaster.

We have no floating debt, and have charged to construction account only the actual additions made to our rolling stock, and the work of extending double track.

Under an act of the General Assembly of Rhode Island, and pursuant to a resolution passed by the stockholders at the last meeting, an agreement has been made with the Wood River Railroad Company to subscribe for $20,000 of their stock. That company has contracted to build the road, which extends from Richmond Switch to Hope Valley, a distance of seven miles, and which is estimated to cost about one hundred thousand dollars.

The number of passengers carried over the road the past two years is as follows:

	1872.	1873.
Through passengers	152,962	178,044
Local passengers	868,948	877,315
Commuters	97,301	106,192

The amount of freight transported over the road the past two years is as follows:

	1872. Tons.	1873. Tons.
Through freight	171,134	188,065
Local freight	58,513	59,689

Superintendent.—A. S. MATHEWS.

Assistant Sup't.—J. B. GARDINER.

Treasurer.—HENRY MORGAN.

Secretary.—F. B. NOYES.

An Open Canal in Winter.

The following is a copy of a letter addressed to the Editor of the *Journal of Commerce*, under date October 27, 1873:

Now that the storm of adverse criticism which met my proposition "to keep open the canals during the winter season" has in a measure subsided, I would desire to reply briefly to the fair and dignified remarks of your influencial journal on the subject, being emboldened to do so by the unexceptionable character of the criticism with which you have been pleased to discuss it. While it is true that, with but few exceptions, the press generally have treated the proposition with ridicule, and in some instances with a not well explained hostility, still I am happy to say that those scientific men who have examined the subject agree with me as to its feasibility. Among others is Professor R. H. Thurston, of the Stevens Institute of Technology, than whom there is no higher authority in this country. I have been invited to submit the question for the discussion of the National Academy of Science, which meets in this city during this week, which invitation I have gladly accepted, and it is therefore probable that the matter will be determined by experts of position and ability; and I venture to say in advance that, though they may not accept my figures or conditions, they will affirm the feasibility of the project. One remark made by you I indorse cordially, which is, that "actual experiment alone on the large scale can determine the accuracy of my figuring," and I hope to be able to make this experiment during the coming winter, and so put at rest all doubts upon the subject. The objection, that in any event the lakes and Hudson River would be closed, is not a vital one. The capacity of the lakes and river while open are unlimited: the difficulty has been and is now, in forwarding the freight which accumulates at Buffalo by a canal which is taxed during its boating season to its utmost present capacity. Again, the lakes are closed less than four months, and the river three months of the year, while the canal is closed sometimes even six months. Without discussing the point that the canal could be easily extended west along the lake shores and south from Albany, the fact of its being open all winter would result in making Buffalo and Albany large receiving centres of produce. Were the Erie canal navigable in the winter, the reliable check of competition as against railway freight tariffs would be better and more effectual than any laws which a Legislature could devise or enforce. Very respectfully yours.

ROBERT A. CHESEBROUGH, 110 Front street.

Debt of Arkansas.

The following is an official statement of the debt of Arkansas, August 1, 1873:

Six per cent funded debt bonds, representing total of funded debt when all outstanding bonds are exchanged		$4,520,000 00
Deduct unfunded bonds held by Government of United States for account of Indian trust fund, and offset by claims due from General Government to State of Arkansas	$1,200,000	
Deduct also unfunded b'ds in hands of creditors or destroyed	470,000	
		1,670,000 00
Leaves unfunded bonds issued or exchanged to date		$2,850,000 00
Seven per cent State Aid Railroad Bonds authorized to be issued (limited to 850 miles of railroad) $11,400,000—amount issued to date		5,350,000 00
Seven per cent levee bonds issued for the construct'n of levees, being total of issue authorized	$2,999,649 71	
Less amount retired and canceled by conversion into lands to date	728,396 49	
Levee bonds outstanding		2,271,253 22
Seven per cent ten year deficiency bonds		300,000 00
Outstanding treasurer's certificates and auditor's warrants		800,000 00
Total State debt		$11,571,253 22

Against this indebtedness are present available assets as follows, viz:

Mortgages held by State on highly improved cotton plantations, estimated will realize		$3,000,000 00
Lands owned by the State, valued at		1,500,000 00
Railroad lines and property subject to lien in respect of State Aid Bonds pledged or awarded to railroad companies, covering 850 miles	$11,400,000 00	
Less by amount of State Aid Bonds yet unissued, covering 490 miles	6,050,000 00	
Balance, or State Aid Bonds issued to date, covering 360 miles		5,350,000 00
Amount due from Memphis and Little Rock Railroad Company		146,000 00
Revenue, 1873		1,050,000 00
Total assets		$11,046,000 00

☞ A Sheffield (Eng.) newspaper mentions a rumor of the "removal of the Sheffield steel business to the United States," and adds that more than one of the leading Sheffield steel establishments are engaged or interested in Pittsburg or Philadelphia. The inciting cause of this great change appears in the important fact mentioned that Bilboa (Spanish) ore is being imported into the United States and made into steel, at a much lower rate than Sheffield firms can sell it. American cutlery in various lines of goods has for a good while past successfully competed with the British article, but this is the first time that Sheffield has acknowledgad that the mantle is falling on other shoulders.

The Wheat Prospects.

The returns of the imports of Great Britain to September 30th show that the gross value of the imports of wheat for nine months is about $99,000,000, of which the United States supplied $42,000,000 worth. The proportion of wheat received from Russia has fallen from 13,000,000 to 7,000,000 hundred weights, as compared with 1872, while that received from the United States has increased from 5,000,000 to 13,000,000 hundred weights. Wheat is usually exported from the North of France, but this year it will have to be imported, and the importations of the South of France will be largely increased. Germany, Hungary and Southern Russia are also deficient in their crops, and that European dealers have accepted the returns as thoroughly reliable, may be judged from the fact that their exports from New York alone during the fourteen days ending October 9th were 3,508,469 bushels, an amount unparalleled in the history of that port. On the other hand, the receipts of wheat at Milwaukee and Chicago have been largely increased, the receipts at the former place of the present crop being 8,555,770 bushels, against 5,044,805 bushels for the same period in 1872. The Milwaukee *Journal of Commerce*, in discussing the effects of the financial panic on the future of wheat, complains that the circulation of money is restricted by law to a fixed amount, although this year the country will have to move twice as much wheat as last year, to say nothing of the cotton.

St. Louis, Salem and Little Rock Railroad.

The St. Louis, Salem and Little Rock Railroad is now completed and in good running order. The road leaves the Atlantic and Pacific Railroad at Cuba, 91 miles from St. Louis, and runs southwesterly to Salem, a distance of forty-one miles, with about nine miles of side tracks and branches. The road is ballasted all the way with gravel from Cuba.

The company was organized in Jan. 1871. It is composed of Alex. L. Crawford of New Castle, Pa.; Wm. L. Scott and Wm. Brewster of Erie, A. J. Crawford of Terre Haute, and C. C. Simmons of St. Louis. These gentlemen are owners of the stock, and have built the road at a cost of more than $1,500,000, in order to reach extensive mining regions in Dent and Crawford counties. The officers of the road are A. L. Crawford, New Castle, Pa., President; Wm. Brewster, Erie, Secretary; J. W. Blanchard, Superintendent, and E. B. Sankey, General Agent. Mr. Sankey was Chief Engineer, and under his direction the surveys were made, the route located, and the work executed. The grading was commenced in May, 1872, and the road was opened to Salem, 41 miles, in July, 1873.

☞ The traffic of the Great Western Railway of Canada for the month of August was $407,968 this year and $381,318 last year. The receipts of the Grand Trunk Railway for the same month were $785,486 this year and $693,045 last year; Midland, $36,323 against $40,478; St. Lawrence and Ottawa, $16,758 against $14,858

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An asterick (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A dash (—) across the column signifies "nil," and running dots (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."
